50) Saṁvartaka (KṢa) – (Saṁvartaka) is (brilliant) like the Fire of Time. He is like the conflagration at the end of (a cosmic) age. He has three brown eyes (stare) fixedly. He has big teeth and (his) form is fierce. He is adorned with a garland of skulls and is beautiful in all (his) limbs. He wears a snake as a sacred thread and, possessing eight arms, he is very powerful. O beloved, a skull, ascetic's staff, noose and severed head, are held in the left. Upraised in the right are a spear, thunderbolt, javelin and sword. His chest is broad, belly large and face frightening. He is replete with all the limbs and is endowed with all the (auspicious) marks. He possesses many ornaments and he wears an elephant hide. He is in the company of Phetkārīśakti (Na) and is fatigued by the extent of the bliss of (his love) sport. Very fierce, Saṁvartaka, sits on a skeleton.[1]

After describing the fifty Bhairavas, the speaker of the ŚM continues:

> These are the Rudras who, possessing great vitality, engender (cosmic) creation and destruction. Born from the letters (*mātṛkāvarṇa*), they bring about the Great Pervasion. They are born from the fifty letters and (each) possesses a Śakti and a vehicle. I have not described them in any other Tantra. They have been described in the *Śrīmatottara*. He who, having visualized (each) form, and deposits (it on the body) becomes a Skyfarer in six months.

Appendix VII

A Comparative Chart of the Contents of the Assembly of Sounds

The series of letters, Bhairavas and corresponding parts of the body of the Assembly of Sounds are listed in several places in the Kubjikā sources. These include the KMT (24/4-20 (in the reverse order), ṢSS (7/45-66), KRU (5/50 ff.) and the *Ṭīkā* (MS K fl. 140a–140b). Morever, the series is well known generally in the Tantras of other schools of the early period and the later ones. We also find it, for example, in the *Svacchandatantra* (2/29-35), *Agnipurāṇa* (145/28-30; 293/41-47), and the *Śāradātilaka* (2/29-35).

The fifty letters and their location in the body are noted in chapter 19 of the KuKh, however the Bhairavas are not named there. Presuming that their names are those listed in chapter six (KuKh 6/14-20), they have been entered first in column two. The variants of these names in the KMT (24/2-20) and ṢSS (38/4-20) are noted next to those of the KuKh. The first variant is from the KMT and the second from the ṢSS. Significantly variant names found in the *Śāradātilakatantra* (2/29-35) are noted in the third column along with those of the *Ṭīkā*.

The locations of the letters and Bhairavas in the body noted in the fourth column are taken from chapter nineteen of the KuKh. Variants in the KMT and ṢSS are noted in brackets in italics. Those of the KnT have been noted in the last column on the right. A compartment is left empty if the entry agrees with the corresponding one to the left of it.

Appendix VIII

The Krama and its Worship

The core of every major Tantric system is a *maṇḍala*. The same deity may be worshipped in many different traditions. If they are not Tantric there is no *maṇḍala*. But if they are, the *maṇḍala* will vary. Thus the *maṇḍala*, even more than the deity, is emblematic of the tradition to which it belongs. Each substantial Tantric tradition has its own specific primary *maṇḍala*. Usually there are also many other secondary *maṇḍalas* that individually or collectively, in a variety of groupings, are suited for various functions.

A *maṇḍala* may be a drawn or visualized geometric figure or diagram. It may also be a stone or any other natural object. Sacred spaces in and around towns and villages or large areas of land with its topographic features can be *maṇḍalas*. Indeed, the whole world order is a *maṇḍala*. *Maṇḍalas* may be internal, within or on the body of people and other living beings. They may be projected into the breathing cycle, senses, or even consciousness and its states. Whatever or wherever they may be *maṇḍalas* are assemblies of sacred beings who have their own places within the *maṇḍala*. A *maṇḍala* is thus a configuration of sacred, powerful places where divine or supernatural beings reside. Worshipped and propitiated there they help the worshipper attain his desired goals.

These beings are the outer, 'embodied' forms of forces, energies, states and metaphysical principles variously understood according to the school in which they are worshipped. As representations of the world order and the realities that are its most essential nature and metaphysical components, *maṇḍalas* are graphic representations of a perception of reality. Seeing the *maṇḍala* is to see reality in all its aspects and complexity united in a single vision of the sacred. The Kubjikā Tantras do not expound a metaphysical system. Instead, in their own way, they teach a phenomenology of mystical states. In the deepest sense, these are the realities represented by the *maṇḍala* and the beings who are worshipped in it embody them. Their iconic and geometric forms symbolize them. But, although they are important, these are of secondary interest to the Kubjikā tradition. Much more important are their sonic bodies made of the mantras that are intoned or mentally recited to worship them, because it is through them that they are experienced more directly and with less effort than through their icon forms. Mantras (which refer to male beings) and Vidyās (which refer to female beings) work together in the *maṇḍala*. The main deity and his or her consort are present there in the form of their mantra and Vidyā, as are their attendents. The core *maṇḍala* envelops the presiding deities as does the body the soul. And this body is the supreme Śāmbhava state of the deity and all his and her energies. Thus the

KRU explains:

> The form (*vigraha*) (of the deity) is wrapped in *maṇḍalas*[1] and it is made of all the mantras. (These) self-generated *maṇḍalas* are the supreme Śāmbhava form (*mūrti*) (of the deity). O fair faced lady! this is the body enveloped by *maṇḍalas* that (arises) along with you. O goddess, placed (in this way) within the (main) *maṇḍala*, it should be worshipped with effort in accord with reality.[2]

In the manifest 'differentiated' state (*sakala*) the *maṇḍala* and the deity sustain each other, as do the body and the soul. When the deity is in its 'undifferentiated' (*niṣkala*) aspect, there is no *maṇḍala* and external worship is replaced by pure contemplation. Mediated by the *maṇḍala*, the deity is realised to be in both conditions – embodied in the *maṇḍala* and disembodied in the transcendental Void – without contradiction. Thus deity is at once free in its essential, transcendental nature and is also the fettered soul in the body:

> He can be realized (only) through the bliss of contemplation (*bhāvanā*) and is free of the locations of the (inner) *maṇḍalas* (*cakra*). (He is) the Void (*śūnya*) and the Void is (his) seat. Inconceivable, he has no (spatial) location (*aniketana*) and is devoid of the stain (of limitation) (*niṣkalaṅka*). He is all things and is the innate nature of (all that) exists (*vastusvabhāva*) and is free of the differentiation of the energies (*kalākalanā*). Distant and near, although close by, he is far away. Stainless and pure, he is not associated (with anything) and is both born from Karma (even as) he is devoid of Karma.[3]

Descending from the Sky of transcendental emptiness into this 'embodied' condition the deity becomes accessible to worship and operates in the world. When it 'descends' into its differentiated aspect (*sakala*) it assumes a divine body, sonic as mantra and geometric as *maṇḍala*. In its most essential form it takes up its residence in the centre of the *maṇḍala* just as the individual soul does in the Heart of the body. In the centre the deity is in its most essential manifest form as its seed-syllable. Ordered around it in the surrounding *maṇḍala*, like the limbs and organs of the body, are the mantras of the attendent pantheon made up of its energies and aspects encompassed and sustained by the complete form of the goddess's Vidyā. Collectively, this unity-in-diversity, is the supreme oneness (*paramadvaya*) of the Śrīkrama, which is the entire tradition. It is the Great Krama, the sequence of mantras and energies that stream from the one energy as aspects of it that emerge from it even as it emerges from the god as his universal will embodied in the goddess. The deployment of her energies as the series – Krama – of mantras generates the *maṇḍala*¸which is the body of the god. The complete projection of the Krama is the complete body of mantra. The female body of the god.

Thus the identification of the officiant with the deity, which is the necessary prerequisite for its proper worship, entails a twofold condition of unity. One is between the 'essence' of the deity and that of the officiant and the other of their bodies. In this way he participates in the worship the deity himself offers to himself and his own body by offering himself and that same body. This profound experience Deity has of 'non-dual worship' (*advayapūjā*) in which he unites with the goddess who is the Krama which is his body, is beautifully described in the opening chapter of the *Kularatnoddyota* where we read:

> O great goddess, in the beginnining Ādinātha fashioned the lineage of the Western Transmission (*paścimakrama*) and then, O dear one, he worshipped it himself. O fair one, he worshipped (this), the best of Kramas (*kramavara*), which bestows the fruit of enjoyment and liberation, with the sacrificial substances (*dravya*) born from his own body, possessing marvellous power (*tejas*).
>
> O one of good vows, once enacted the most excellent union (*melāpaka*) with the goddess of Ādinātha I mentioned (previously) who originates from his body, and externalized all the *Kramamaṇḍala* within his own body, the lord of the gods worshipped it, along with (its) mantras, Vidyās and (their) limbs. (He did so) with the heaps of sacrificial substances (*dravya*) mentioned previously, as divine and excellent offerings and with lamps (*dīpaka*) of many forms feed with the Great Clarified Butter (*mahāghṛta*) (of his bodily fat) along with food offerings (*naivedya*) born from the energy (*śakti*) of his will, with human flesh and beef (*mahāpala*), divine offerings of flowers and tasty food (*bhakṣabhojya*), (each offered) separately.[1]

---

[1] *ādāv eva mahādevi ādināthena nirmitam* |

> (He worshipped thus) established in supreme non-duality with excellent Great Incenses (made of human fat and flesh) and many divine (offerings of) ornaments along with (substances) born from (his) great bodily essence (*mahādhātu*). Endowed with supreme bliss and holding the great *argha* vessel (filled with sacrificial wine), the Lord of the gods, worshipped, O dear one, the great and excellent *maṇḍala* (*cakra)* and he, the emperor and Lord of the Śrīkula, deftly put all the Śrīkramas in due order in (each in their) place, including the Krama of the Child and the rest.
>
> (Thus) he worshipped the Great Krama with hymns and excellent divine lauds, by exhibiting the Great Gestures and with salutations and the waving of lamps along with divine words of praise and rites of adoration centered on the *maṇḍala* and the Krama. Then taking up the Lamp (*dīpaka*), O fair one, he who does all things, was conjoined (*yukta*) with the goddess.[1]

The union of the god with the goddess in the centre of the *maṇḍala* is the model and the culmination of numerous unions great and small through and for which the parts of the *maṇḍala*, more or less complex, are configured. A *maṇḍala* has no existence apart from its parts but it is much more than just their sum. *Maṇḍala* is the spatial ordering of its parts by virtue of which they work together as a whole. A *maṇḍala* is like a machine. Machines work because their parts are

configured correctly. If we pull apart the parts of a watch it no longer tells the time. In the case of *maṇḍalas* these parts are mantras. One of the major processes at work in the formation of any Tantric system is the ordering and development of groups of mantras. This ordering – Krama – of the formal bodies of the beings who inhabit a *maṇḍala* is paralleled by the ordering of their sonic bodies in a series of mantras in what is thus appropriately called the *Kramamaṇḍala*.

Mantras may have a visible form and the writing of mantras in *maṇḍalas* is an important part of practice. However, most essentially, mantras are formless sound. Just as forms are deployed in space and both constitute and are configured by the spatial order; analogously, sounds deployed in time and are related to the temporal order. In this case the sequence – Krama – of their intonation is their configuration. The sequence of intonation is the sonic *maṇḍala* which corresponds to the configuration of forms of the formal *maṇḍala*. Form and sound work together in the ritual. Both are coherent, significant and powerful because of their ordered appearing – Krama. The SKh explains:

> The rite of adoration takes place by means of (the goddess's) mantras in accord with (their) subtle and gross sequence (*krama*). The subtle (form of her energy) is within the body and is extracted from (both) inside and within. The gross (form of her energy) is Vidyā and her Command is the complete *maṇḍala* (that contains all the Kramas).[1]

The configurations that constitute a *maṇḍala* are based on some essential feature they share that makes them members of a group. Moreover, essence and form coincide. A set of mantras in a group are generally structured in the same way. Within the common, basic structure, individual components vary. In this way a group of mantras is easily generated for a group of entities. The member of a group shares basic typological features with other members of the group. These features are reflected in the structure of their corresponding mantras. Thus when entites are listed with their mantra we can observe a regular sequence of component parts in each mantra. Some of these are fixed and remain the same in each mantra in the series. Others vary according to the entity to which they refer. Thus some components are common and others particular.

The sequence in which the component parts of mantras are uttered, just as the sequence in which the mantras themselves are, is significant and important. Often they are fixed and in some cases necessarily so as, for example, when the mantras relate to a series of the teachers in a lineage. The sequence of the transmission of the teaching thus clearly corresponds to the sequence of mantras that contain the energy of each teacher. The `current' of teachers and of the transmission of the teaching is thus visibly that of a stream of mantric energy manifest in the sequence of the mantras.

vidyārūpā bhavet sthūlā ājñā saṁpūrṇamaṇḍalā || SKh MS G fl. 28b.

Changes in the sequences are no less significant. In some cases the regular serial order is ineffective in the ritual. In other words, that *maṇḍala* does not work there. A different one is required made of the same parts, but in a different order. In some cases, the energies of mantras may be effective only when they are out of their usual order and a fresh network of connections is set up between the components. This new ordering brings into effective conjunction the individual components within each mantra and with the others in the series. This `mix' can be used in the ritual. It can be applied because it is effective and it is effective because, it is part of the universal, common order, even if some of the individual components are out of order. This rearrangement may take place at the level of the single units of the mantra, right down to the individual syllables of which they are composed or concern the configuration of each single mantra in relation to the others. Most frequently the changes are regular permutations. A common example is the progressive addition of the vowels one after another to a consonant to form a series of syllables. Sometime the syllables of two or more mantras are uttered alternately or along with the series of letters. The possibilities are virtually endless.

Such manipulations are basic in Vedic recitation which focuses on the order in which the syllables of a mantra may be recited and the permutations of that order. While this is a less common modality of permutation of Tantric mantras, the term Krama has been adopted by the Tantras from the technical lexicon of Vedic ritual procedure where it denotes

> a particular manner or method of reading and writing Vedic texts so called because the reading proceeds from the Ist member, either word or letter, to the 2nd, then the 2nd is repeated and connected with the 3rd repeated and connected with the 4th and so on; this manner of reading in relation to words is called *padakrama*, in relation to conjunct consonants *varṇakrama*; the words or letters themselves when combined or arranged in said manner.[1]

The Vedic gods were early on understood to reside in the Vedic mantras that invoked them insofar as the Vedas – understood as the totality of all mantras – are the source and ground of everything to which they refer. Speech, Word, and even just the Sound of the Vedas is thus understood to be the manifest form of the

---

[1] Monier-Williams p. 319.

Unmanifest Absolute Being from which all things come and to which they return, like Sound that emerges from Silence and returns to it. All Tantric traditions take over this fundamental Audition of Divine Sound. Deity, like the Veda, is the embodiment of mantras that possess a natural, internal principle which orders them into the limbs and ornaments of the deity. The utterance of the mantras reproduces the body of the deity. Thus the sequence in which they are uttered is no less important than their form and must be observed in order to maintain the 'embodied' sonic identity of the deity which the officiant–cum–yogi worships and whose body he assumes as his own. Accordingly, major Kaula schools focus on this principle – the order or Krama. This they understand to be the most distinctive feature of their tradition as a reflection of the deity and the cosmic order it embodies.

Two types of groups of mantras are distinguished in the liturgies of the goddess Kubjikā. These are the mantras of the core of the *maṇḍala* that are ordered in 'Kramas'. There are also other groups called 'oghas' lit. 'currents' or 'fluxes'. These are also used to worship attendent configurations of beings that may be projected into subsidiary *maṇḍalas* drawn close to the main *Kramamaṇḍala,* which is the 'abode of the sacrifice' (*yāgasadana*)[1] – or within it around the central core. All the mantras that form a part of the Kula liturgy (*paddhati*) 'mounted on the Void'[2] can be said to be the Krama in a broader sense. And one must know the Krama. In this context this means both the ritual procedure as well as the means through which it can take place, that is, the deities and their mantras. The rite must be performed in the correct way, in the right place, and at the right time. But this is not enough. It must be performed by one who is empowered to do it. The liturgy is effective not just because of what is done but more essentially because of the energy that is transmitted through it. The reception and knowledge of the transmission of this energy is an essential aspect of the Krama. Indeed, ultimately, it is the Krama. In order to know the Krama in this supreme sense the officiant must be properly initiated and instructed. Otherwise he is not a *kramika*, that is, he neither knows the procedure nor is he connected to the flux of divine power that makes him a true member of the tradition. The YKh (1) warns:

> Once known one's own particular place, one should perform

---

[1] O goddess, I will explain. The Kula liturgy should be worshipped. There (in order to do that) one should first cause the (*maṇḍala* which is the) abode of the sacrifice to be fashioned in an auspicious place.

the worship of the Krama (*kramārcana*). Otherwise there will be obstacles and mistakes (*duryoga*)[1] at every step. All that is devoid of the knowledge of the Krama is out of order (*akrama*). He who does not have the knowledge of Kula and performs rituals is one who is `one who is without the Krama' (*akramin*) and (his rite) is only conterproductive. It is useless for one to worship who is devoid of the Krama, without differentiation of place and the arising of the Siddhas (i.e. the production of mantra). Devoid of the knowledge of his own Krama and the three junctures, one should not consider (one such as he) who is `without the Krama' to belong to the tradition (*kramika*). He is a sinner, a fallen (fettered soul). One who does not have (knowledge of) the sequence (*krama*) of the planes (*bhūmikā*) and is devoid of the twelve sequences is not a member of the tradition (*kramin*); he is a sinner. The Lord of the Maṇḍala should not be worshipped without (knowing) the measure (*māna*) of the Maṇḍala. (He who does so) should not be considered to be a teacher (rather) he is a great sinner. The fool who, devoid (of the knowledge) of the deposition of his own Krama, makes a deposition out of order (*vyutkrama*) should be considered to be a fettered soul, not a member of the Kulakrama.[2]

---

[1] The word '*duryoga-*' literally means 'bad conjunction'. One of the earliest uses of the term 'yoga' is with reference to the proper performance of the Vedic sacrifice. In that context, as in this one, it refers to the 'union' i.e. mindful involvement of the sacrificer (*yajamāna*) with the rite he is sponsoring and the correct ordering of the rite in such a way that each phase is properly linked to the others. Mistakes in this respect are 'bad conjunctions'.

The Kubjikā Tantras tirelessly remind the adept that Kubjikā is not only the deity of the tradition, she is its ultimate identity and power. The transmission of the teachings is the transmission of the goddess's presence and her purifying and transformative power. This deploys itself concretely in the entire range of activities and forms involved in her worship, both mantric and iconic, in the parts and aspects of the goddess and all the beings that accompany her beginning with her consort down to the many individual members of the multitudes that attend on her in all their aspects. These representations are linked most specifically to three major Kramas, which are the forms in which the goddess has descended down into the world, and those that she has converted to herself in the external seats of their transmission and their internal equivalents.

This descent and movement does not only take place just once when the tradition is founded. It recurs repeatedly in each Age and within the adept. The ritual reproduces the conditions at the origin of things. The ritual regenerates the adept into the form of the divine being who acted and was acted upon in the beginning of the transmission, which coincides with the creation of the world. In this perspective, purification is a process whereby the adept returns to this original prestine state, the state in which the goddess descended into the world in and through the body of the god who is her consort and the divine archetype of the adept himself.

The location of these places in the body are normally indicated in the liturgies and their recollection forms an essential part of the worship of the Krama. Indeed, all the aspects of the worship of the Krama, including that of the lineage of teachers must also be contemplated internally for the ritual to be fruitful and significant.[1] The body of the adept, energized by the mantras, is the deity's body and it is from the deity's body that the Krama arises. In this perspective, the process whereby the Krama is generated and withdrawn is one of coming down from above, that is, from the upper `outer' transcendence into the inner embodied immanence, and the reverse back. The Kramas arise and fall away internally within the body renewing it as they renew themselves in this perennial cycle. Thus the Kramas in the following passage are four. One for each of the four Ages. The extra sequence – that of the Skyfarer (*khecarakrama*) is the sequence of the

movement of energies within absolute being. In this passage the goddess is speaking:

> I will (now) tell (you) their arising and then their falling away. The fourfold Krama should be known along with (its) arising and falling away. (The four Kramas) have emerged from my body. Listen to the method which concerns them. The Nameless (goddess) is conjoined with the Nameless (god), the Krama of the Skyfarer is in between them. It has emerged from the power of knowledge and is merged into the the marrow. The other Krama, namely, that of the Aged, has emerged from my anger. O god, it is located in the sinew and that is said to be (its) falling away. (The Krama) of the Youth is located in the Wheel of the Navel and has emerged from that place. It merges with the blood. This is its arising and falling away. Similarly, the Krama of the Child has emerged from the Wheel of the Yoni and merges into the sperm. (These are) the three arisings and (their) falling away.[1]

The Kramas and their arising and falling away are thus related not only to the physiological cycles of the body, they also form a part of the dynamics of consciousness, the movement of vitality through the psychic centres and the energies that emanate from the deity. Just as they operate in the body, the streams of mantras constituting the Krama energize and characterise the rhythm of time in the world. The Kramas originate from the body of the goddess in this case also, but instead of merging with the bodily processes they manifest as the cycles of time. We have already mentioned that they correspond to the great cycles of the Ages (*yuga*). They also correspond to the moments of their microcosmic equivalent – the times of the day. Thus the three Kramas are those of the goddess of the dawn, midday and sunset:

> At dawn my form is that of a young girl. I am a young woman in the middle of the day and at night I am old. This is my triple condition. This is why the one Krama is said to be of three kinds within the Kulakrama.
>
> It is the Krama of the Child when Bālāvvā (the Girl Mother) is within it. At midday comes (the Krama) of the Youth and so it is said to be the Middle One. The (Krama of the) Aged, of aged form, is offered at sunset.[2]

In this case the goddess manifests herself directly without the mediation of the body:

> Listen, O lord, I will explain how the one Krama is triple. When everything was merged into my body, (when) there were no sun, moon or stars, no constellations, no world or (even a single) Mountain, O god, (when there was) neither you, nor I, and the immobile (universe) was a Void. (Then) the Divine Command arouse out of that formless (state). (Such was) the energy of Śiva's will, the sprout (of emanation). Shaped like a lightning flash, she illumined the surface of the firmament. Thus the Divine Command subduing the senses (performed) long and terrible austerities. And so she developed and became the Transmental.
>
> The sprout was divided into two. (One part became) the Formed (immanence) and (the other) the Stainless (transcendence – *nirañjana*). (Such) is said to be the union of Śiva and Śakti (that takes place) within every (living being). Your are Śiva and I am that Supreme (goddess) Kubjinī. My triple form has arisen by virtue of the (Krama of the) Skyfarer.

The Kramas

The first verses of the KuKh, collectively known as the *Saṁvartāmaṇḍalasūtra,* lay out in the concise manner of an aphorism – *sūtra* – the most essential constituents of the teachings of the Kubjikā Tantras. These are deployed in the form of mantras in the two main *maṇḍalas* of this school. One is the *Saṁvartāmaṇḍala*. In this *maṇḍala* the goddess Kubjikā and her consort Kujīśā are worshipped in the centre of a triangle set in a hexagram. This is the core of the *maṇḍala.* The inner triangle is worshipped as the Yoni of the goddess and is elaborately described in the Root *Sūtra*.[1] It basically consists of the sacred seats (*pīṭha*) and their presiding Siddhas and consorts. A sequence of six groups of mantras is projected onto the six corners of the hexagram that surrounds the triangle. This set of six is the Krama. These six groups, like all the other permutations of the six groups that constitute a Krama, are projected onto the corners of a hexagram to form the Six Parts (*ṣaṭprakāra*) into which the *maṇḍala* is divided and is common to all the Kramas.[2]

The Krama outlined in the *Saṁvartāsūtra* in the beginning of the KMT is considered to be the most basic one, common to all the modalities.[1] Known as the Krama of Twenty-eight (*aṣṭāviṁśatikrama*), it is divided into six groups of 4, 5, 6, 4, 5 and 4 mantras. This is the only form of the Krama found in the KMT and the ṢSS. Although this term does not appear in the KMT,[2] it is common in the later texts and is virtually a synonym for the Krama of the Kubjikā cult amongst Newar initiates for whom this is the basic form. Despite the varieties of Kramas we find in the KuKh, it remains fundamental. When the primordial Liṅga bursts apart to generate the *maṇḍala* it forms itself first into the triangle of the Yoni and then by uniting ('churning') with itself it 'splits up and melts' by the passion of that union to form the 'six parts and the twenty-eight divisions'.[3]

[1] See KuKh chapters 26, 38 and 42.

[2] This, the *Ṭīkā* confirms (in the corrupt Sanskrit typical of these texts), is common to all the Kramas *etāsāṁ sarvāsāṁ ṣaṭkoṇaṁ vidyate tadā maṇḍalaṁ sarvasādhāram* | Ibid. MS K fl. 121b.

Throughout our text the goddess herself is repeatedly said to consist of six parts, as is her *maṇḍala*. Similarly, the goddess is worshipped by worshipping the Krama (*kramārcana*), which is sixfold as is the entire tradition (*āmnāya*).[4] It is surprising therefore, that the KMT refers to this series in this way again in only one other place.[5] But this may be simply to guard its secrets. Indeed, chapters 11-19, which are a considerable part of the KMT, deal with these six groups.[6] Arranged there in the directions of the corners of the Hexagram, they are:[7]

1) East – the First Group of Four: These are the four sacred seats - Oḍḍiyāṇa. Jālandhara, Pūrṇagiri and Kāmarūpa. In the process of emanation this group is associated with Akula and the energy of the will.
2) South-east – the First Group of Five: These are five stages in the development of Speech namely, the Point (*bindu*), Power (*śakti*), Sound (*nāda*), Obstruction (*nirodha*) and the Half Moon (*ardhacandra*). This group is related to Kula and the energy of knowledge (*jñānaśakti*).
3) South-west – the Group of Six: These are the Six Wheels that emanate from the Wheel of the Command (*ājnā*) to that of the Foundation (*ādhāra*). They are associated with the energy of action.[8]
4) West – the Second Group of Four: These are the four sacred seats again but this

[8] See KMT 11/6–31. The remaining part of this chapter and the two that follow deal with the Six Wheels. The KMT relates only the first three groups to an energy. The KRP (3/22–28) relates the last three groups to the energies, Vāmā, Jyeṣṭhā and Raudrī.

time treated in associated with four Ages[1] to which they correspond.
5) North-west – the Second Group of Five: These are the Five Wheels called Devī, Dūtī, Mātṛ, Yoginī and Khecarī.[2]
6) North-east – the Third Group of Four: The four meditative states called *Piṇḍa, Pada, Rūpa* and *Rūpātīta.*[3]

The independent texts that were redacted after the KMT developed triads of Kramas related to the three lineages. In the world, the transmission – Krama – has three forms. Each one is propagated by a Siddha in one of the sacred seats and so is associated with three lineages, called those of the Aged, the Youth and the Child. Concretely, these are three ritual procedures centred on the projection into the hexagram in the centre of the *maṇḍala* of three series – Krama – of mantras that uttered in the course of the liturgy, which is also called Krama. The core of these series of mantras is a sequence of six groups. This configuration and the number of mantras may vary in each of these three lineages according to different texts. According to the ŚM,[4] for example, the configuration of the sequence in the lineage of the Aged corresponds to the one presented in the *Saṁvartāsūtra* (i.e. 4, 5, 6, 4, 5 and 4). The sequence of the Youth, also called the Middle lineage, consists of twenty-six mantras in groups of 5, 5, 5, 6, 4 and 1.[5] The sequence of the Child, or the Youngest, as it is called in the ŚM, consists of twenty-seven mantras in groups of 4, 5, 6, 4, 5, and 3.[6]

The KMT does refer to the three Kramas and relates a form of Kubjikā to each one, however, it describes the contents of only one of them, as does the ṢSS. So the ŚM represents an advance in this respect on the KMT. However, as the three Kramas are hardly mentioned elsewhere in the ŚM it is likely that the chapter where the Kramas are described, which is summerized below, is not part of the earliest redaction of the text.

[1] KMT 14/7–11ab. The four sacred seats appear twice in this version of the Krama, associated with different deities. The first set is Susūkṣma, Sūkṣma, Amṛta and Antima (see KMT 11/8a and, in a different sequence, KRP 6/39–48ab). The second variety links the four sacred seats with the Four Ages. The deities in this case are Ādhārīśa, Kuraṅgīśa, Cakrīśa and Mathana (see KMT 24/83 and KRP 6/48cd–52ab and KnT fl. 53 where they are called the *yugādicatuṣka*).

[2] These Wheels are discussed in KMT from 14/11cd up to the end of chapter 16. The reader is referred to Heilijgers-Seelen's detailed study (1994).

[3] These four are described in detail in chapters 17 to 19. In KMT 24/66 ff. Various groups of deities are listed that should be worshipped in the external rite of adoration (*pūjā*). Amongst them are six groups that resemble the the six groups of the series of twenty-eight, although they are actually thirty. These are the four sacred seats, five Yoginīs, the six Yoginīs Ḍākinī etc., the five Mahāntārikas, sixfold knowledge (*jñāna*) and four Siddhas. See Heilijgers-Seelen 1994: 31 note 40.

In other sources we find that the number of mantras in each of the six parts may vary between twenty-four and twenty-eight. Although the KuKh begins with the *Saṁvartāsūtra* which outlines the Krama of Twenty-eight, the basic form of the Krama in the KuKh is that of the YKh which consists of twenty-seven mantras or 'divisions' (*bheda*). Indeed, it is expressly said to be the one which is specific to the MBT as a whole[1] and is even claimed to be the main form of the Krama in the entire tradition of the Kubjikā Tantras.[2] Accordingly, the goddess whose sonic body is the Krama is said in our text to have twenty-seven divisions[3] and the Krama of Twenty-seven Divisions is said to be divine[4] to distinguish it from other less excellent Kramas. Originally transmitted orally,[5] it is linked with both Śiva and Śakti[6] and so is the Kulakrama of Bhairava and Bhairavī.[7] The Krama of Twenty-seven Divisions is in the majority of cases presented in our text as consisting of 4, 5, 6, 5, 4 and 3 units, although the contents of these units may vary.[8] But this is not always the case. In chapter 28 all three Kramas consist of 27 mantras but one of the three is not configured this way.[9]

The KuKh could sort out these inconsistencies, as do other Kubjikā Tantras, by attributing different Kramas to the different lineages. We have noted that the ŚM, for example, attributes the Sequence of Twenty-eight to the Transmission of the Aged (*vṛddhakrama*).[10] Generally, as happens in the the ŚM and SKh, the three sequences transmitted through the lineages of the Aged, Youth and the Child are not configured the same way. However, the three sequences described in the KuKh[11] all consist of twenty-seven units although their contents and configurations vary. Two sequences of twenty-eight units are outlined in chapter twenty-six of the KuKh. This is the Krama that will be revealed in Tisra, the sacred seat of the future.[12] A ploy that allows for innovations, what will take place in the future generally enjoys a special prestige. In chapter 44 we find another Krama of Twenty-eight divided 4-5-5-6-5-2.[1] Other configurations are mentioned in the KuKh but not described at length. Chapter 39 contains several which, unless we find other sources, will remain hardly more than just groups of cifers. Although the KuKh considers the sequence of twenty-eight to be important, it prefers the sequence of twenty-seven units in line with the MBT in general. Conscious, no doubt, of the change with respect to the earlier tradition, the goddess is addressed in the KuKh as having emerged, divided into twenty-seven parts, from the Krama of Twenty-eight.[2] Accordingly, in chapter eight of the AS, which professes to be part of the MBT, the goddess begins by saying that a true member of the tradition (*kramika*) is one who knows the six parts (*prakāra*) both internally and externally. These are the groups of 4, 5, 6, 4, 5, and 3 that constitute the Krama of Twenty-seven.

In the beginning of chapter fifty of our text[3] we find a brief exposition of the places in the body where the six groups of the Krama of Twenty-eight divisions should be worshipped. This passage is also found in the SKh.[4] It is likely that it was drawn from there by someone who forgot or was unaware that the basic Krama of twenty-seven divisions is the one taught in the rest of the KuKh. It is also possible that this took place in an earlier phase of the redaction of the KuKh when it had not yet adopted the Krama of Twenty-seven. The same considerations apply to the *Saṁvartāsūtra*. The redactor(s) of the KuKh, struck by the long form of the *Saṁvartāsūtra* found at the beginning of the ṢSS not only took it from there but also wrote the commentary on it that constitutes the second chapter of our text.

Chapters fifty-nine to sixty-four of the KuKh are taken wholesale from chapter twenty-nine to thirty-two of YKh (1). There we find an exposition of the Krama of YKh (1) which is the Krama of Twenty-seven[5] in six groups of mantras divide 4-5-6-4-5-3 that constitute the Kaumārakrama. The groups are the four sacred seats (KuKh chapters 59 to 61), the Five Jewels (*Ratnapañcaka*) (KuKh chapter 62), the Six Yoginīs of the Hexad of Knowledge (*Jñānaṣaṭka*) (KuKh chapter 63), the Group of Five Pure Ones (*Vimalapañcaka*) and the Triad (*Trikabheda*) (KuKh chapter 64). These chapters present six complex and obscure 'esoteric explanations' (*bhūmikā*) of the energies of the planes of existence (*bhūmikā*) to which they correspond. Most of chapter 66 corresponds to YKh (1) 33 that deals with the Octad of Kula associated with this Krama.

There are two recensions of the *Yogakhaṇḍa* of the MBT. Although there are several chapters common to both, YKh (2) contains a good deal of material not found in YKh (1) that exhibits several substantial developments in the system. One is the growth of the lineages of teachers.[1] Another parallel development is the extension of the Krama. This is presented there not only as triple but ninefold. Each Krama is expanded into three more Kramas of the Child, the Youth and the Aged so that all three Kramas are repeated within each one. Thus the initiate worships the three Kramas in all three lineages, which makes a total of nine Kramas.[2] YKh (1) is oblivious of this development. Indeed, although it does refer to the triple transmission and the three Kramas, it focuses on just one, finding in its components a wealth of meaning and symbolic significance. The YKh (2) explains:

> The transmission of the Child, the Youth and then the transmission of the Aged. These traditions of the (goddess) Kujā are preceded in this by the teaching. The transmission of the Aged is divided into three and so is the Middle One. O god, the transmission of the Child is threefold and (so) the Kulakrama is ninefold. [. . .] Above there is that one (Lord) Ciñciṇīnātha (who is) the Śāmbhava plane. It is bliss and (perfectly) pure and Ciñciṇī is (of that) same (nature). [...] Threefold, threefold and again threefold, the Krama of (the goddess) Kujā is ninefold. Authority operates once known that division of the transmissions. 2) Kaumārakrama: Ānanda, Vinaya, Āṇava
3) Vṛddha: Mātṛ, Vidyā, Adhikāra

A further development is the permutation of these nine, three time again in the same way, thus making twenty-seven, which the SaṁP says is the result of 'a great expansion of consciousness'.[1] Out of these, the *Ṭīkā* presents the nine sequences belonging to the transmission of the Child. The author then refers the reader to the *Bṛhadāgama* for details of the remaining two sequences of nine each.[2] Similarly, the SKh refers to this set of twenty-seven and stresses that it is important to know and practice it. Even so, it presents the mantras of only nine sequences. The mantras presented in the SKh differ in many details from those presented in the *Ṭīkā* although the overall structure of the Kramas is recognisably the same. Moreover, it appears that the nine Kramas presented in the SKh are also those of the Transmission of the Child, which the SKh stresses is the one that is revealed in this Age of Strife and enjoins the adept to worship this Krama which is `endowed with the nine conventions', that is, the nine Kramas within the Transmission of the Child.[3] The YKh (1) prefers the Transmission of the Youth[4] on which it focuses as its sole Krama. However, although, as noted above, the KuKh draws the entire exposition of this Krama from the YKh (1), it repeatedly refers to the Transmission of the Child as the Krama this Age. Moreover, virtually contradicting what it itself does, the KuKh stresses that only the worship of the Krama of one’s own Age is effective. Indeed, one wonders why YKh (1) has not chosen this one. Perhaps the redactor assumed that the Transmission of the Aged, consisting of twenty-eight mantras, is the one taught in the KMT and wished to present the one in YKh (1) as an earlier one.[5] It is possible that following the same logic of retrogression, the later Tantras adopted the Transmission of the Child as the primary one. Thus it remained as the basic standard one in the later Kubjikā sources.

Whatever be the case, it seems that the complete worship of all twenty-seven Kramas, although it became the most prestigious option, was rarely adopted.

[5] The Transmission of the Aged presented in the *Śrīmatottara* is, in fact, very similar to the Krama of the KMT. See the following appendix.

Even in its ninefold form, the worship of the Krama takes a great deal of time. It is not surprising that this shorter form is preferred. Indeed, in common contemporary practice amongst the Newars, the simpler single or threefold form of the Krama is the most popular.

Appendix IX

The Krama of the *Śrīmatottara*

The Krama of Twenty-eight expounded in the commentary of the *Śrīmatottara* on the *Saṁvartāsūtra*.

The following presentation is drawn from a commentary on the short version of the *Saṁvartāsūtra*[1] with which the KMT begins. Written in prose, it is found in a good number of the many MSs of the first chapter of the ŚM. It also circulates independently in numerous manuscripts. The commentary explains the six divisions of the Krama of Twenty-eight. Although, as we have seen, Kramas differ, several groups are common to most of them. For example, as the source of all the Kramas, it is not surprising that mantras of the four seats should commonly be the first group in a Krama. Thus the inner explanation of the groups of this particular Krama is generally instructive.

For no stated reason, the commentary reverses the order of the Krama of the KMT. In the forward order it consists of:

1) The Four Sacred Seats.
2) The Five Jewels.
3) The Six Yoginīs.
4) The Four Lords of the sacred seats.
5) The Five Pure Ones
6) The Four Siddhas and their Energies.

This is also the basic Krama worshipped in the KnT which presents it in a well ordered and systematic way. It is virtually the same as the Transmission of the Aged described in chapter twenty-three of the ŚM, presented below. This chapter of the ŚM, like the commentary, may well be a later addition. The ŚM as a whole, like the KMT it closely follows, hardly refers to the three Kramas. Moreover, the Krama outlined in one place in the body of the text, although very similar, is not the same.[2] Before turning to the mantras through and as which the Kramas are worshipped according to the ŚM, we begin with an exposition of the the realities the Krama of Twenty-eight represent.

---

[1] The reader is refered to note 1 of chapter one of the translation of the KuKh for the version of the *Saṁvartāsūtra* with which the KMT begins of which the following is a commentary.

[2] The passage reads:

> First come the four sacred seats and then the group of five Yoginīs. O goddess, this is followed by the Hexad of Knowledge and the four deities of the seats along with the group of five Aged Ones and the four Siddhas.

The Last Group of Four

The energy of the transmission through which the universe is generated emanates from the four sacred seats. Thus they are normally worshipped first in accord with 'the order of emanation' (*s.r.s.tinyaaya*), which the Kubjikaa Tantras prefer. In this case the commentary presents the sequence of the Krama in reverse, that is, in the order of withdrawal. Thus we begin from the end.

In the most general sense, the Krama represents the cosmic process. However, although this macrocosmic dimension is always present, the commentary is mostly concerned with how the energies of the entities that constitute the Krama operate in the pyscho-physical organism and where they do so within it. As usual, they are associated with the energies of Speech and the circulation of the vital force in the subtle body that replicates their cosmic activity. Depending on one's knowledge or ignorance of it, this activity may be either liberating or binding. The Krama explains the total human condition in terms of the dynamism of its embodied state, vital essences, perceptions, emotions, impulses, and underlying vital forces, both individual and universal. Throughout the presentation this fettered, conditioned state is shown to have an opening towards the liberated, unconditioned state built into it insofar as they constitute the Krama which originates from one universal energy and are aspects of it.

The four Siddhas and their energies, which constitute the last group of four at the end of the Krama, represent the final resultant condition of this process. Accordingly, they are represented by the last eight consonants of the alphabet. Bound by their four energies, the individual soul wanders incessently through the emotive states that bind it. At the same time the same energies fill it and the body in which it is lodged with vitality so completely that it overflows into the outer world to generate time and with it the cosmic process from the most minute details illumined in the smallest spans of time to the vastness of its entirety manifest in the great cosmic cycles. We turn now to what the *Śrīmatottara* has to say:

> The (last) four are the four Siddhas and the rest. Who are

ādau pīṭhāni catvāri yoginīpañcakaṁ tathā |
jñānaṣaṭkaṁ punar devi [g: devī] catvāraḥ [kh: -ra] pīṭhadevatāḥ [kh g: -tā] ||
vṛddhapañcakasaṁyuktaṁ tathā [k: -saṁyuktāstathā] siddhacatuṣṭayam | ŚM 9/50-51ab

Other forms of the Krama of Twenty-eight are found in KRP 3/21-29 and AP 143/7cd-14 and 144/19-25.

those Siddhas? (They are) the Siddhas beginning with Bakīśa (i.e. the letters Śa, Ṣa, Sa and Ha). In (this) fourfold manner, in accord with the sequence of the many letters, (the deity) emanates the universes in association with the sequence of (energies) beginning with Vāmā who is governed (as are the others) by (the one) energy.

What is Vāmā? By the word Vāmā (is meant) the energies beginning with Vāmā. (These are) Vāmā Jyeṣṭhā and Raudrī and (the powers of) will (knowledge and action). By means of this and sustained by (this) energy (*śakti*) (Bhairava) emanates the four aspects. These four aspects are lust, anger, greed, delusion and the like. It is due to this that (each) fettered being (*prabaddha*) wanders (in this world) in the form of the individual soul (*aṇu*).

(The four energies) generate light and bliss fourfold from the soles of the feet up to the topknot by means of (the reality) hidden within the heart in order to unfold one's own nature. By the rotating movement within (these) nine[1] (*navāntasthāvartena*), which is full (of the vital energy imparted by) the inhaled breath (*pūraka*), the fluxes of the four energies are filled and, like overflowing banks (of a river in flood), fill (all things).

What are (these) energies? (These energies are) the letters A U M (of the cosmogonic OṀ). In terms of the measure (of time) ranging from a twinkling of an eye (*unmeṣanimeṣa*) to a few seconds (*kāṣṭha*) and the rest (of the measures of time) and, having formed the years, *yugas* and *manvantara* etc in accord with the succession of lunar fortnights and months and the sequence of energies (*kalā*), it establishes that reality which fills (all things) (*pūraṇārtha*) in according with its essential nature in relation to the measure of time (*vāra*). Again, the (group of) four is, in reality (*tattvataḥ*), Ya Ra La Va. This is the meaning.[2]

---

[1] Presumably, the nine are the four Siddhas and four energies along with the fundamental transcendental reality that sustains them.

The other Group of Five – the Five Pure Ones

The Five Pure Ones focus on the production of the conditions of the outer world, although their embodied counterpart is not ignored. This is one aspect of the energies of the Pure Knowledge they contain. Another is the Pure Knowledge of liberating Yoga. Thus the first Pure Knowledge – the one without beginning – contains all five. Externally, they are equated with the Five Elements and inwardly with the universal causal factors – cause, effect and agency – that operate in the production of every phenomenal entity. The second Pure Knowledge is that of the Omniscient Ones. It relates to the energies of the letters that generate the universe of Speech and Form and with it the human social order. The third Pure Knowledge is that of the the four Siddhas who taught Kaulism in the four Ages. They represent the cosmic cycle grounded in the transcendental reality that moves through emanation, persistence and destruction. The fourth Pure Knowledge is the Yoga of the Fire at the End of the Aeons practiced by these Pure Ones. Confirming our understanding of the twofold aspect of the processes at work in the Krama we are taught that Yoga has two aspect. Yoga for the ignorant is engagement in the state of transmigration. For the wise it is the 'association (*sambandha*) with the reality which is the instrument' of this process and hence liberating. Finally the Pure Knowledge of the Rule is knowledge of Ku.n.dalinii, the energy of the Rule – Samayinī – through which the universe is generated. Ascending up through the subtle body, it merges in its highest state with the transcendent. Let us see what the "SM has to say.

A) *Anādivimalajñāna* – The Pure Knowledge without Beginning

> What (is meant by) 'another pentad' (mentioned in the *Saṁvartāsūtra*). (This) pentad consists of the emergence of the essential nature of Earth and the other (four) gross elements. According to its other nature, that is, as the Pure Sequence (*vimalakrama*), the pentad (is also another). What (is meant by) Pure? The meaning is that it generates the Pure Division that has no Beginning (*anādivimala*) by abiding in its own essential nature as the cause, effect and agent, conjoined and vibrant up to the Beginningless Aeon as the Pure nature which is (that of the five Pure Ones, namely) the Beginngless (*anādi*), the Omniscient (*sarvajña*), the Pulinda Siddhas, Yoga and the Rule (*samaya*).[3]

B) *Sarvajñavimala* – The Pure Omniscient One

As the (reality that) illuminates all knowledge, the purpose of Pure Knowledge is to generate the universe, which is the object (*artha*) of all knowledge, along with its (essential) reality (*tadartha*), by (the power) of (its) omniscience. The union (*yoga*) of the colours white, red, black, and yellow (takes place) by the union of Letter (*varṇa*) and what is beyond Letter (*avarṇa*)[1] in order to generate all (the forms of) emanation and differentiate all the sequences by union with that Letter (*varṇa*) (which is the energy of all the letters).

Again the word '*varṇa*' also (denotes categories of) people and other (living beings). (This includes) the castes (*varṇa*) Brāhmaṇa, Kṣatriya, Veśya, Śūdra and the rest. The castes serve to establish all things in their proper place (*viśvasaṁsthāpana*) (in the social order) for the common commerce (*vyavahāra*) of the three worlds.

It (also) generates (something) else by means of the special (qualities) of the letters (*varṇa*). It emanates by conjoining the letters from A to KṢa. It generates the essential nature of the (one energy called) Letter of (all the energies of the) letters in countless forms. This is the (energy called) the Omniscient Pure One (*sarvajñavimalā*).[2]

C) *Siddhavimalajñāna* – The Pure Knowledge of the Siddhas

The Siddhas in the form of the Pure Knowledge (*vimalajñāna*) of the Siddhas, abide in (their) essential nature as the sequence of Siddhas beginning with (the condition of) pervasion of the Skyfarer, (followed by) merger, generation and persistence. The Siddhas are Khagendra, Kūrma, Meṣa, Mīna and the rest. They generate the qualities by means of (their) essential nature which is light (*prakāśa*). The meaning is that the Siddhas generate the reality (*artha*), the essential nature of which is certainty (*niścayārtha*), (ultimate) reality (*tattvārtha*), consciousness (*vijñānārtha*) and liberation (*muktisvarūpārtha*) as the pure nature that is attained by means of the reality which is the essential nature of the sequence of the series (of teachers).[1]

---

[1] The word '*varṇa-*' means both 'colour' and 'letter' and the negative '*avarṇa-*' means both 'no letter' and 'no colour'. In other words '*varṇa-*' denotes the manifest state on the analogy of articulated sounds that combine to form the words that constitute the universe of meaning. It also denotes the primary colours that combine to form the universe of visible forms. Thus manifestion is a process of combination and separation. It is sustained in its fundamental being by the unmanifest transcendent from which it is derived and with which it is essentially linked.

D) *Yogavimalajñāna* – The Yoga of Pure Knowledge

Yogavimala is explained (next). The pure division is (also) the Yoga of Saṁvartaka – the Doomsday Fire, that is, the Yoga of the arising of the state (*vyavasthāna*) in which the commerce of the ocean of transmigratory existence is emanated. Its purpose is to generate the condition of life and death (brought about by) the conjunction and disjunction (respectively) of the Knowledge of Yoga. Thus, because it is the instrumental cause (of this existence), the association (*sambandha*) with the reality which is the instrument (of this process) is said to be Yoga.[2]

E) *Samayavimalajñāna* – The Pure Knowledge of the Rule

Now *Samayavimala* is explained in order to impell (*pravartamāna*) the practice of the Rule (*samayācāra*). The term `*samaya*' denotes the place where the Cavity (of Brahmā) is located. The energy of the Rule (*samayinī*) that resides in the practice of the Rule is located there and moves down and up. The immobile state (*acārāgati*) of the vital breath is in the twelve finger space in the form of the seventeenth energy (*saptādaśīkalā*) (of the Moon). She enters the locus of the uvula united with the perpertual flux (of the vital force). Kujā who is in contact (*upayoga*) with the Cavity is the Kujā of the Pure Practice (*Samayavimala*) who is established in the essential nature of Śakti.

> Then again, established in the form of Wind,[1] she is established in Space, Fire (*tejas*), Water and Earth in (her) multifarious form, that is, as the Pure Form (*vimala*) conjoined with the Will, she emanates (the universe) in accord with the principle of emanation (*sṛṣṭinyāya*). This is the `other group of five'.[2]

The Second Group of Four

This group of four consists of the four Siddhas of the sacred seats. They are related to the Bhairavas of the first four consonants and so, along with the last group of four that is related to the last four consonants, they encapsulate the entire outer order of outer manifestation represented by the consonants. In their positive aspect they are related to the four sacred seats and reveal the liberating knowledge of the tradition. As such they represent the four states of consciousness – waking, dreaming, deep sleep and the Fourth State. In their negative, binding aspect they are located firmly in the physical body where they generate excreta and the rest of the grossest bodily products. At the embodied, gross mental level they are related to the most intense and base emotive states, even as they protect from them. Thus, as the sequence is in the reverse order, they follow as the gross products of the Group of Six that governs the vital constituents of the body. The ŚM continues:

> Who are the four? They are the four Siddhas who are the lords of the sacred seats. Who are those Siddhas that are the lords of the sacred seats and how are they present in an external body? Khecara, Ratna, Mahat[3] and Megha[4] and the rest – these are the lords of the sacred seats. The fundamental reality (*artha*) of the (four) Siddhas are the four states.
>
> (Their status) as lords is for the benefit of the lineage (*santāna*), for the (fourfold) purpose of emanation, to reveal knowledge, to reveal liberation and to serve as a means to

[3] Heilijgers-Seelen (1994: 31, note 42) lists this name as Marutānandadeva.

[4] Some MSs read Meṣa. Heilijgers-Seelen (ibid.) notes that these are probably the secret (*gupta*) names of the Siddhas of the four sacred seats in their *yuga* variety. namely, Ādhārīśa, Cakrīśa, Kuraṅgīśa and Śrīmadandhrīśa (see intro. vol. 1, p. 625 table 4).

accomplishment (*siddhi*).

(They assume) the form of Siddhas who possess the power of the (universal) will to be the guardians of the four transmissions (*krama*) of the Ages (*yuga*). In accord with the division of the location of the transmissions (they accomplish their purpose) as the illuminators of many matters universally. (Thus) the Siddhas are the lords of the sacred seats in order to (establish and maintain) the four conditions.

Again, the four in the form of letters are the four letters beginning with Ka and ending with Gha. The four Siddhas who are the lords of the sacred seats are Krodha (Ka), Caṇḍa (Kha), Pracaṇḍa (Ga), and Śiva (Gha). In the body, they are located in the foundation, navel, heart, and throat, respectively. They are there in order to guard the individual soul (*pudgala*) and to give rise to the four goals of human life (*varga*), in due order. They are associated with the conditions (*sattva*) that undergo many changes. (These include) laughter, weeping, rolling around, dance, music, as well as the passion that brings delight, anger, greed and delusion in order (simply) to play. (Their) purpose is (also) to emit urine, excreta, and blood. The four Siddhas reside in the external body and pervading (it) abide (there for such purposes). These are the four.[1]

The Group of Six

The Group of Six consists of the six Yoginīs who govern the vital constituents of the body (*dhātu*). If properly propitated they nourish and sustain them, whereas they deplete those of one who is sinful and disrespects them. As usual they have a cosmic, universal aspect related to the energies of their mantras. These are presented schematically in the following table. The reader is referred to chapter sixty-three of the edition and translation for a detailed exposition of this group of Yoginīs.

18. Table of the Six Yoginīs

Yoginī	Dākinī	Rāmaṇī	Lākinī	Kākinī	Śākinī	Hākinī
Metaphysical Principle	Transmental	The Equal One	Skin and eyes	Sound	Power of Sound	End of Sound

A) Ḍākinī

> What is the group of six. It is the group of six – Ḍa Ra La Ka Sa and Ha – that is, the Six Yoginīs associated with the Krama whose form is the Hexagram and nature to grace and chastise (*nigraha*). First of all, for many varied causes, the sacred seats are generated from the location of the Transmental by a series of conjunctions (*yogakrama*) in the course of moving through the aggregate (*kula*) (of the Triangle) with the four (energies). Then, once the group of six is generated beginning with the supreme and the body has been differentiated, then, (when that energy) has taken up its residence in the locus of the skin, it is called Ḍākinī.[1]

B) Rāmaṇī

> In the same way, by means of the lower path and the sequence of the path of the two polarities (*koṭi*) (it comes down) to reach the plane called Samanā (the Equal One). Then, having abandoned the aggregate of gross elements by means of the Pure Sequence (the same energy) takes up its residence, as the pervader of the pervasion of the plane of the eighty-one (*pada*s of Navātman), in the location of the (constituent essence of) blood. It is then called[2]

[2] Some of the MSs read Rākinī as the name of the this Yoginī, which is the one we most commonly find.

Rāmaṇī.[1]

C) Lākinī

Again, (the same energy), established in the flesh, is called Lākinī. It is both supreme and inferior, gross and subtle and is in many modalities (*nānāprakāra*). It comes (down) (to this state and is given this name when it does so) by means of the sequence of the skin and the eyes in order to generate and establish the duality (*bheda*) of the condition of transmigratory existence.[2]

D) Kākinī

Next comes the Pervasive One (*vyāpinī*) (who) inwardly (pervades) the body as the lordship of the divine body and as the lord of the entire aggregate of mantras. The (same energy) is called Kākinī in the locus of (bodily) fat. It is invisible, free of characterizing phenomenal features and, pervading the Void (*kha*) as (the movement that travels) above and below, it is Sound.[3]

E) Śākinī

Again, (the same) endless energy assumes a fierce form as the Fire of Time. It is present in the body of space, time and the rest. Filling (it) with the resonances of the (Cosmic) Path, it is the energy (*mātrā*) called the Power of Sound that (acts) as the fundamental (principle) (*pradhāna*) of all the aggregate of energies. Once it has divided up its own body, it takes up its residence within the (essential constituent of) bone and is then called Śākinī.[4]

F) Hākinī

> Again, (the same energy in the form of) Ratnamālinī, is in the locus of the End of Sound. (She shines) like a sunstone and is aroused. Once (she has) generated the group of four doors there, she divides up her own nature in accord with the sequence of all the seed-syllable mantras by means of the sequence of the parts (*pada*) of the utterance of Haṁsa. Thus, she who moves within the extremity of the twelve finger space, reaches the locus of (the essential constituent of) sperm and enters it. (Then this energy) is called Hākinī. One should understand the attainment (*upalabdhi*) which is the complete knowledge of (this) group of six in this way.[1]

The Five Jewels

The Five Jewels are mantras dedicated to the millions of Yoginīs who reside in the five spheres of the world-order. These are the Sky, Heaven, Wind, Mortal and Hell Worlds. Here they are explained to be the rays of energies that radiate from the one energy who operates variously, as described, in these five spheres and pervades them. The reader is referred to chapter sixty-four of the edition and translation for a detailed account of the Five Jewels with which this account can be compared.

> What is the group of five? The group of five '(comes from) Akula and enters Kula'.[2] What (comes from) Akula and enters Kula? Kula means energy and Akula Śiva. The pentad consisting of the five gross elements is generated by the union of Śiva and Śakti. The (spheres of the universe, namely,) the sky (*gagana*), heaven (*svarga*), wind (*pavana*), and worlds of mortals and snakes are pervaded by the twenty-five principles. They are related (to one the other) as is the pervaded to the pervader, in the form of the Five Jewels divided into struck and unstuck sound (*varṇa* and *avarṇa*) in the sequence of the letters Ga Sa Pa Ma and Na.[3]

A) The Jewel of the Sky

> (The energy of the first Jewel) resides in the Skyfarer and is unsupported. Pervaded by sixty-four hundred million rays (of energy), she resides in the Transmental, that is, in the Void (of absolute being). Mounted on the Wheel, she moves in accord with the division into Kula and Akula. Her nature is motion (*ācāra*) and her form the Jewel (of Kuṇḍalinī); she gives rise to the knowledge of the Jewels. This is the pervasion of the first Jewel.[1]

B) The Jewel of Heaven

> Another is the pervasion of heaven (*svarga*). (This energy) resides in heaven in many ways. Established in thirty-two hundred million (rays of energy), she abides in a state of multifarious pervasion. Established in the twelve divisions (of the vowels) free of the (four) neuter (ones), this supreme energy (*kalā*) emanates (the universe). Thus she generates the flow of emanation of the twelve energies (of the other vowels) in the form of the multiple and wonderful diversity (of the universe). This is the pervasion of the second Jewel.[2]

C) The Jewel of the Wind

> Again, (another aspect of this fivefold energy) is located in the Wind (*pavana*). Her form is Wind and is an unimpeded (force). She resides in the womb of the enjoyment (*bhoga*) of the world of the Wind. The meaning is that she is the pervasive (*vyāpinī*) (energy) who experiences (this) (*bhoginī*).[3] She measures sixteen hundred millions (Yoginīs) and as the energy (of the letters) she emanates in many forms in accord with the (deployment of) the letters (*varṇanyāyena*).

[3] Variant: ‘*yoginī*’.

What does that mean? There are sixteen energies (here). As (Kuṇḍalinī), the energy (of the letters located) on the tip of the nose, she resides in the (sixteen) letters ranging from A to emission. She moves inwardly constantly as the (vital) breath (*vāyu*). She moves inwardly and so is the inwardly moving one. By `inwardly' is meant `within the sixteen' (or 'the end of the sixteen'). She resides there. This is the pervasion of the third Jewel.[1]

D) The Jewel of the Mortal World

Again, (another of the five aspects of this energy) resides in (the world of) mortals and emanates (her energies). Pervasive, she is the mortal (world) and resides in the womb of the enjoyment of the mortal world as the division of eight hundred million (*koṭi*) (Yoginīs) of many forms. She is the fourfold Yoni as the throng (of all) the two legged, four legged, legless and (many) legged (creatures). She has may forms and so emanates (her energies) in association with the (subtle body called the) City of Eight.[2] She resides in the Wheel of the Heart. Seated on the Wheel, she generates, by (the Wheel's) anticlockwise rotation, lust and the rest, that is, lust, anger, greed, delusion, mad passion (*mada*), fear, aversion, jelousy, meanness and the like. Associated with this City of Eight, she emanates (them) and so withdraws (them also). This the pervasion of the fourth Jewel.[3]

E) The Jewel of the Hell World

Again, (the same energy) is located in the netherworld (*naraka*). She pervades by the sequence of the lower path. She resides in the womb of the enjoyment of the (world of the) snakes (*nāga*) and is established in the (midst of the) four hundred million (Yoginīs). She is in a pervasive (state) and is born as many Yoginīs in order to protect the stability (*sthiti*) (of the universe). She pervades at the End of the Nine[1] as the Sun and Moon and as Śakti by means of the sequence from Na to Pha.

In the form of a Liṅga, she is mounted on the Wheel of the Foundation. She resides in the essential nature of the letters in the division of the twelve jewels (of the vowels). (Thus) she is mounted on the wheel of twelve spokes that extends from Someśvara (Ṭa) to Śikhin (Pha) and emanating them one at a time in due order, she resides in the body and she is present outside (it) as the Jewel (of Kuṇḍalinī).

(Thus) one should know the group of five '(that comes from) Akula and enters Kula'.[2]

The (first) group of four

This consists of the four sacred seats. This passage is quoted complete elsewhere[3] to which the reader is referred.

The Worship of the Krama (*kramārcana*) according to Chapter Twenty-three of the *Śrīmatottara*

Chapter twenty-three of the *Śrīmatottara* is dedicated to the worship of the *maṇḍala*. This takes place in two modalities. Firstly, as the *Gurumaṇḍala*[4] in which Bhairava and his emanations are worshipped as the teachers. This is followed by the worship of the Krama in the *Kramamaṇḍala*. After expounding the first in the first half of this chapter, the second goes on to treat the second. The exposition begins, as usual, with the three Kramas corresponding to the lineages (*oli*). They are the three basic ones. There is no reference to any subsidiary permutations. The Transmission of the Aged, Middle One and Child consist of 28, 26 and 27 mantras, divided 4-5-6-4-5-4, 5-5-5-6-4-1 and 4-5-6-4-5-3, respectively.

The Kramas are worshipped with meat and wine. And also, more elaborately, with menstrual blood, fish and sexual fluids (*kuṇḍagolaka*).[1] Offerings of bodily fluids and flesh is consonant with the essentially embodied nature of the Krama. The external form of the Krama (*bāhyakrama*) in the *maṇḍala* is only one of two aspects the worshipper should recollect. The other is the internal one (*antakrama*). Indeed, this is the basic one. The parts of the Krama are energies that sustain the constituents of the body, gross and subtle, pneumatic, sensorial, mental, and biological and those of the metaphysical principles that trail off from it progressively, step by step into their transcendental source. Thus the organic offerings to the Krama in the *maṇḍala* are appropriate. They feed the deities who embody these energies with those substances that are their food in the inner Krama. Satisfied, they nourish the body and the energies that stream into it and out of it.

The Transmission of the Aged

The Group of Four Sacred Seats

The structure of the mantras: 1) The Five *Praṇavas* followed by the syllable HSKHPHREṀ. 2) The name of the sacred seat ending with ‘*-pīṭha*’. 3) The name of the goddess. This is formed from the name of the sacred seat by adding ‘*īśāmbādevī*’ to it and prefixing with ‘*śrī*–‘. 4) The name of the Siddha is formed similarly but is suffixed with ‘*-ānandadeva*’. 5) The syllable KHPHREṀ. 6) The name of the tree growing in that seat prefixed with *‘śrī-’* and ending with ‘*-vṛkṣa*’ 7) The syllable KHPHREṀ. 8) The name of the cremation ground in that sacred seat prefixed with *‘śrī-’* and ending with ‘*śmaśāna*’. 9) The name of the guardian of the field prefixed with *‘śrī-’* and ending with ‘*-kṣetrapāla*’. 10) The phrase ‘*tayor yugmapādukāṁ pūjayāmi*’ – i.e. ‘I worship their pair of sandals’. For example, the first mantra is:

[1] He who worships (the Krama) regularly with meat and wine has knowledge and is free. Having learnt the knowledge (of the Krama) he possesses the Śāmbhava (state). (Only then) should he be known to be a member of the tradition, otherwise (he is so) (only) by name.

Scent, flowers and a lamp along with the food offering (*naivedya*). Liquor, menstrual blood, fish, meat and sexual fluids (*kuṇḍagolaka*) – O beloved, worshipped during the regular and occasional rite as prescribed, (the Krama) bestows enjoyment and liberation and, divine, it is the means to obtain every object of desire. (He who worships in this way has a) long life, good health, lordship and the intense (grace of the) Command. He who knows the three Transmissions and reveals the types of the Transmissions is an elder in the Kula lineage and is like Bhairava himself. One should worship him with (all the) activities of speech, mind and body.

The Group of Five Jewels

The Five Jewels are a series of five mantras dedicated to the Yoginīs who reside in five spheres of existence and the Lord – Nātha – who governs them. 1) All the mantras begin with the Five *Praṇavas*. 2) HRĪṀ. 3) The seed-syllable of the Jewel. 4) The name of the sphere to which is added ‘*lokāmṛtaratnabhogagarbhagāminī*’. This attributive compound qualifies the Yoginī of that sphere who ‘moves in the womb of the enjoyment of the Jewel of the nectar of the world of . . . ’. 5) The Yoginī characterized by the number of Yoginīs in billions (*lakṣakoṭi*) she leads. 6) The name of the Lord – Nātha prefixed by ‘śrī’. 7) The mantra ends with ‘*tayor yugmapādukāṁ pūjayāmi’*. For example, the first mantra is:

AIṀ HRĪṀ ŚRĪṀ PHREṀ HSAUṀ HRĪṀ GLŪṀ GAGANALOKĀMṚTA-RATNABHOGAGARBHAGĀMINĪ CATUḤṢAṢṬHIYOGINĪ ŚRĪCIÑCINĪ-NĀTHA TAYOR YUGMAPĀDUKĀṀ PŪJAYĀMI ||

This group is worshipped in the middle of the Krama and in the places in the body noted in the following chart.

The Hexad of Knowledge

All the mantras begin with the Five *Praṇavas* and end with *tayor yugmapādukāṁ pūjayāmi*. 1) Seed-syllable of the Yoginī. 2) Series of seed-syllables formed from the first letter of the Yoginī's name to which six long vowels are added. 3) The name of the Yoginī. 4) The name of the mother. This ends with the title '-*kubjikāmbā*'. 5) The syllable KHPHREṀ. 6) The name of the Lord, prefixed with *'śrī-'* and ending with '-*ānandadeva*'. The first mantra of the series is:

AIṀ HRĪṀ ŚRĪṀ PHREṀ HSAUṀ ḌMLVRYŪṀ ḌĀṀ ḌĪṀ ḌŪṀ ḌAIṀ ḌAUṀ ḌAḤ ḌĀKINĪ ḌĀMARAKUBJIKĀMBĀ [KH: + ŚRĪ] KHPHREṀ ŚRĪḌĀMARĀNANDADEVA TAYOR YUGMAPĀDUKĀ.M PŪJAYĀMI ||

The Hexad of Knowledge is worshipped in the Hexagram and in the places of the body noted in the following table.

The Group of Five Pure Ones

All the mantras begin with the Five *Praṇavas* and HSKHPHREṀ and end with '*ambāpādukāṁ pūjayāmi*'. 1) The name of the Pure One in the locative. 2) The syllable KHPHREṀ. 3) The name of the Mother (*ambā*). They are worshipped in the middle of the Triangle and in the locations in the body recorded in the following table.

22. Table of the Five Pure Ones of the Transmission of the Aged

The Pure One	The Mother – Ambā	Location in the Body
Anādivimala	Mātaṅgī	Between the Eyebrows
Sarvajñānavimala	Śrīśabarī	Throat
Yogavimala	Pulindī	Heart
Siddhivimala	Campā	Navel
Samayavimala	Kubjikā	Liṅga

The Four Leaders of the Siddhas

The four leaders of the Siddhas are Oḍḍīśa and the others who preside over the sacred seats. All the mantras begin with the Five *Praṇavas* and HSKHPHREṀ and end with '*nāthapādukāṁ pūjayāmi*'. The names of the four Siddhas are prefixed with the honorific '*śrī-*'. This, the 'second group of four, is worshipped in the middle of the Triangle and in the body. The four Siddhas and their locations in the body are as follows.

1) Oṁkāra – anus 2) Ṣaṣṭhīśa – penis 3) Cakrīśa – navel 4) Mitrīśa – heart

The Middle Transmission

The First Group of Five – The Five Sacred Seats

All mantras begin with the Five *Praṇavas* and Navātman and end with '*pādukāṁ pūjayāmi*' followed by the Five *Praṇavas* in reverse. 1) The name of the sacred seat beginning with *'śrī-'* and ending with '*-pīṭha*'. 2) The syllable HSKHPHREṀ. 3) The goddess of the seat ending with '*-ambādevī*'. 4) The syllable KHPHREṀ. 5) The name of the god of the seat ending with '*-nātha*' in the first mantra and in the second alternately '*-ānandadeva*'.

AIṀ HRĪṀ ŚRĪṀ PHREṀ HSAUṀ HSKṢMLVRYŪṀ ŚRĪJĀLANDHARAPĪṬHAṀ HSKHPHREṀ CAṆḌAKUBJIKĀMBĀDEVĪ KHPHREṀ ŚRĪKUṆḌALĪŚANĀTHA PĀDUKĀṀ PŪJAYĀMI ||

The first group of five is worshipped in the middle of the triangle and in the body in the places listed in the following table. Note the serial order of the seats. It normally begins with Oḍḍiyāna (= Oḍḍi), however in this case it begins with Jālandhara.

23. The First Group of Five Sacred Seats of the Middle Transmission

Seat	Goddess	God	Location in the Body
Jālandhara	Caṇḍakubjikā	Kuṇḍalīśa	Lotus
Pūrṇagiri	Karālinī	Pūrṇānanda	Forehead
Kāmarūpa	Ucchuṣmā	Kāmadeva	Between eyebrows
Oḍḍi	Oḍā	Oṁkāra	Nose
Candradvīpa	Kubjikā	Candra	Mouth

The Group of Five Siddhas

All the mantras begin with the Five *Praṇavas* and Navātman and end with *pādukāṁ pūjayāmi*. The Five Siddhas are Bhairavas of the Assembly of Sounds. The corresponding letters are noted after the names, which end with '*-ānandadeva*'. They are worshipped in the 'middle of the triad (*trika*)', that is, the Triangle, and in five places in the mouth, as follows: 1) Bālīśa (Ya) – lip 2) Bhujaṅga (Ra) – lips 3) Khaḍga (Va) – row of teeth 4) Pinākin (La) – row of teeth 5) Vakīśa (Śa) – tip of the tongue.

The Group of Five Mothers, the Aged Ones

All the mantras begin with the Five *Praṇavas* and HSKHPHREṀ and end with them. The mantras begin with the Mother's name prefixed with *'śrī-'* and end with '*ambādevīyugmapādukāṁ pūjayāmi*'. This group of Mothers called the Aged Ones (*vṛddhā)* is worshipped in the middle of the Triangle and in the five Wheels of the body. They are: 1) Rambhā – Foundation. 2) Sundara – Self-supported. 3) Cakra

– City of Gems. 4) Vakrā – Unstruck Sound. 5) Ambikā – Purity.

The Group of Six

This group of six consists of the Six Yoginīs of the Hexad of Knowledge in the Transmission of the Aged. After the Five *Praṇavas* with which each mantra begins comes the seed-syllable of the Yoginī, which is the same as in the previous Transmission. This is followed by the name of the Yoginī and the Wheel in the body in which she is worshipped in the dative. Then comes the syllable KHPHREṀ and then the name of the Yoginī prefixed with *'śrī-'* and ending with '*ambāpādukāṁ pūjayāmi*'. Thus the first mantra is:

AIṀ HRĪṀ ŚRĪṀ PHREṀ HSAUṀ ḌMLVRYŪṀ ḌĀKINĪ ĀDHĀRĀYAI KHPHREṀ ŚRĪḌĀMARĪ AMBĀPĀDUKĀṀ PŪJAYĀMI ||

KMLVRYŪṀ	Kākinī	Unstruck Sound	Heart
SMLVRYŪṀ	Śākinī	Pure One	Stomach
HMLVRYŪṀ	Hākinī	Command	Navel

The Group of Four Siddhas

All mantras begin with the Five *Praṇava*s followed by the name of the Siddha prefixed with *'śrī-'* and end with '*-nāthadevapādukāṁ pūjayāmi*'. The four are worshipped in the Square surrounding the Triangle in the *maṇḍala* and in the following parts of the body: 1) Ānanda – middle of the eyebrows. 2) Vimala – heart. 3) Vidyākhya – navel. 4) Ādhārīśa – foundation.

The Transmission of the Youngest

The Four Sacred Seats

The structure of the mantras: 1) The Five *Praṇavas* followed by Navātman. 2) Name of the sacred seat prefixed with *'śrī-'* ending with '*-pīṭha*' in the locative followed by HSKHPHREṀ. 3) Name of the goddess. This is formed from the name of the seat by prefixing '*śrī–'* to it and suffixing '*-maṅgalāmbā-*

devī'. 4) The syllable KHPHREṀ.[1] 5) The name of the Siddha prefixed with *'śrī-'* and suffixed with '-*ānandadeva'*. 6) The name of the tree growing in that seat prefixed with *'śrī-'* and ending with '-*vṛkṣa*'. 7) The syllable HSKHPHREṀ.[2] 8) The name of the guardian of the field prefixed with *'śrī-'* and ending with '-*kṣetrapāla'* followed by the syllable KHPHREṀ.[3] 9) The name of the cremation ground in that sacred seat ending with '*śmaśāna'*. 10) The name of the Maṭha prefixed with *'śrī-'* and ending with '-*maṭha*'. 11) The name of the gesture prefixed by *'śrī-'* 12) The name of the cave prefixed with *'śrī-'* and ending with '-*guhā*'. 13) The phrase '*pādukāṁ pūjayāmi'*. For example, the first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSKṢMLVRYŪṀ ŚRĪKĀMARŪPAPĪṬHE HSKHPHREṀ ŚRĪKĀMAMAṆGALĀMBĀDEVĪ KHPHREṀ ŚRĪMITRĀNANDADEVA ŚRĪCIÑCIṆĪVṚKṢA HSKHPHREṀ ŚRĪḌAMBARAKṢETRAPĀLA KHPHREṀ BHŪTABHASMAŚMAŚĀNA ŚRĪŚAṀKHIṆĪMAṬHA ŚRĪTRIŚIKHĀMUDRĀ ŚRĪSIDDHAGUHĀ PĀDUKĀṀ PŪJAYĀMI ||

[2] In the equivalent series of mantras in the Transmission of the Eldest this syllable is KHPHREṀ

[3] In the equivalent series of mantras in the Transmission of the Eldest this syllable follows the name of the cremation ground.

The Group of Five Jewels

The core structure of this set of Five Jewels is the same as the set in the Transmission of the Aged. However, there is no male partner and each mantra ends with 'KHPHREṀ *śrīkubjikādevīpādukāṁ pūjayāmi'*. Before this comes the name of a Wheel in the subtle body in the dative. All the mantras begin with the Five *Praṇavas*. For example, the first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HRĪṀ GLŪṀ GAGANALOKĀMṚTARATNAGARBHAGĀMINĪ CATUḤṢAṢṬHILAKṢAKOṬIYOGINĪ ĀJÑĀYAI KHPHREṀ ŚRĪKUBJIKĀDEVĪPĀDUKĀṀ PŪJAYĀMI ||

Externally the ŚM says the Five Jewels are projected into the 'second' triangle. Presumably this is the downward facing triangle of the Hexagram. The variables that differ from the mantras of the Five Jewels of the Transmission of the Aged are recorded in the following table.

26. Table of the Contents of the Five Jewels of the Transmission of the Youngest

Gagana	Command	Head	Left
Svarga	Unstruck Sound	Heart	Right
Pavana	Filler of Gems	Navel	Front
Martya	Self-supported	Anus	Middle
Nāga	Foundation	Liṅga	Above

The Group of Six Yoginīs

All the mantras begin with the Five *Praṇavas* and HSKHPHREṀ. 1) The seed-syllable of the Yoginī. This is the same as in the other Transmissions. 2) A seed-syllable preceded by *'śrī-'* and formed from the initial letter and vowel of the Yoginī's name. 3) The Yoginī's name ending with '*-kubjikāmbādevī*'. 4) The syllable KHPHREṀ. 5) The name of the Bhairava prefixed with *'śrī-'* and ending with '*-ānandadevapādukāṁ pūjayāmi*'. The first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSKHPHREṀ ḌMLVRYŪṀ ŚRĪḌĀṀ ḌĀMARAKUBJIKĀMBĀDEVĪ KHPHREṀ ŚRĪKRODHĪŚĀNANDADEVAPĀDUKĀṀ PŪJAYĀMI ||

As usual, the Six Yoginīs are worshipped in the Hexagram. The corresponding locations in the body are listed in the table.

Lākinī	Caṇḍa (Ga)	Throat
Kākinī	Śiva (Gha)	Heart
Śākinī	Dāruka (Ṅa)	Navel
Hākinī	Kūrma (Ca)	Genitals

The Group of Four Mothers

The mantras begin with the Five *Praṇavas* and Navātman followed by the name of the Siddha prefixed with *'śrī-'* and ending with *'-ānandadeva'*. Then comes the syllable KHPHREṀ followed by the name of the consort prefixed with *'śrī-'* and ending with '*-ambāpādukāṁ pūjayāmi*'. The first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSKṢMLVRYŪṀ KHECARĀNANDADEVA KHPHREṀ CAṆḌĀKṢĪ – AMBĀPĀDUKĀṀ PŪJAYĀMI

This group of four Mothers – Ambā – is worshipped in the Triangle. Their locations there and in the body are noted in the following table.

28. Table of the Contents of the Group of Four of the Transmission of the Youngest

Jewel	Ratna	Khaṇḍamālinī	Left	Heart
Wind	Maruta	Vīrāvalī	Right	Throat
Cloud	Megha	Vikṛtā	In front	Tip of the nose

The Pentad of Mothers

This is a group of five Mothers worshipped alone without consorts. As usual all the mantras begin with the Five *Praṇavas*. These are followed by the syllable HSKHPHREṀ. Then comes the name of the goddess prefixed with '*śrī-*' and ending with '*-ambāpādukāṁ pūjayāmi'*.

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSKHPHREṀ ŚRĪŚAṀKHINĪ – AMBĀPĀDUKĀṀ PŪJAYĀMI |

Externally, the ŚM simply says that they are worshipped 'in the middle of the triangle'. They are projected onto the face thus: 1) Śaṁkhinī – ear. 2) Kuṭilā – ear. 3) Antyajā – eye. 4) Viśvarūpiṇī – eye. 5) Bhṛṅgī – nose.

The Triad of the Aged Mothers (*Vṛddhātrika*)

The mantras begin with the Five *Praṇavas* followed by Navātman. Then comes the name of the mother prefixed by "śrī-" and ending with '– *ambāyai pādukāṁ pūjayāmi'*. The three Aged Mothers are 1) Vāmā 2) Jyeṣṭhā 3) Raudrī. This triad is worshipped in the 'middle', presumably on the corners of the Triangle. No locations on the body are mentioned. The first mantra is:
AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSKṢMLVRYŪṀ ŚRĪVĀMĀMBĀYAI PĀDUKĀṀ PŪJAYĀMI ।

The Worship of the Thirty-two goddesses of the Vidyā

The ŚM presents two variant forms of the *Kramamaṇḍala* that accomodates the Krama. The core of both is the same, namely the usual Triangle, surrounded by the Hexagram and three circle ('girdles' – *mekhalā*). This is the basic form of the *maṇḍala* that is described in the ŚM and the KuKh.[1] It is normally augmented with lotuses that are set around it in which the remaining parts of the Krama are worshipped. The account in chapter twenty-three presents two versions which may well have originally been independent. The first has one lotus with thirty-two petals[2] on which the the goddesses of the syllables of Kubjikā's Vidyā are worshipped. The names of these goddesses and how they are worshipped have been recorded previously and so need not be repeated here.[3]

The Six Dūtīs

The worship of this form of the *maṇḍala* concludes with that of the six 'Dūtīs' in each of the 'feet' of the Hexagram. These are, in due order: Kṣobhiṇī (the

Disturbing One), Ākarṣaṇī (the Attractive One), Mohanī (the Deluding One), Jṛmbhaṇī (the Yawning One), Stambhinī (the Paralysing One) and Kṣudrānyutsādinī (the Remover of Vulgarities). Their mantras begin with the Five *Praṇavas*. These are followed by a seed-syllable formed by adding *anusvāra* and the six long vowels Ā, Ī, Ū, AI, AU and Ḥ to HSHPR. Then comes the name of the Dūtī in the dative prefixed with '*sarvajana-*' 'all people'. It ends with the diction '*pādukāṁ pūjayāmi*'. Thus, the first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ HSPHRĀṀ SARVAJANA-KṢOBHIṆYAI PĀDUKĀṀ PŪJAYĀMI ||

Vajrakubjī is worshipped in the middle. This Vidyā consists of sixty-four syllables. It is formed from Kubjikā's standard thirty-two syllables and what one could say is the Vidyā of Vajrakubjī proper by alternating a syllable from each. According to the *Ṭīkā* (MS K fl. 18a) it is as follows:

AIṀ BHA VA GA JRA VA KU TI BJI A KE MBE HSKHPHRĪṀ HSKHPHREṀ TRAI SHKHPHRĪṀ LO KU KYĀ BJI KA KE RṢA HSRĀṀ ṆI HSRĪṀ HRĪṀ HSRAUṀ KĀ ṄA MĀṀ ÑA GA ṆA DRĀ NA VA ME ṆE A KLĪṀ GHO STRĪṀ RĀ MA MU HĀ KHE KṢO CCHRĀṀ BHA CCHRĪṀ KĀ KI RI ṆI ṆI KI AIṀ ṆI SAUḤ VI ŚRĪṀ CCE |

The two Vidyās are:

BHAGAVATI AMBE HSKHPHREṀ SHKHPHRĪṀ KUBJIKE HSRĀṀ HSRĪṀ HSRAUṀ ṄAÑAṆANAME AGHORĀMUKHE CCHRĀṀ CCHRĪṀ KIṆI KIṆI VICCE |

AIṀ VAJRAKUBJIKE HSKHPHRĪṀ TRAILOKYĀKARṢAṆI HRĪṀ KĀMĀṀGADRĀVAṆE KLĪṀ STRĪṀ MAHĀKṢOBHAKĀRIṆI AIṀ SAUḤ ŚRĪṀ |

(AIṀ O Vajrakubjikā! HSKHPRHĪṀ O you who attract the three worlds! HRĪṀ O you make the body of Passion melt! KLĪṀ STRĪṀ O you who cause great arousal! AIṀ SAUḤ ŚRĪṀ)

In this way the initial primary phase of the worship of the Krama concludes with the application of the *maṇḍala* as a powerful magical device over which the goddess in her 'attractive' magical form presides. She deludes the wicked even as she arouses the spiritual energies of her devotees. Thus she protects from the first and inspires the latter.

A similar way of shifting attention from the core of the *maṇḍala* to its surrounding parts in association with the worship of other aspects of the goddess is outlined in chapter 44 of the ṢSS. According to that procedure the goddesses of the thirty-two syllables of the Vidyā are worshipped first in eight groups of four each governed by a Mother. In this case, the eight petalled lotus on which they are worshipped surrounds the Triangle in the centre. Kubjikā resides there as her Samayā Vidyā with her syllable – the Kula Peak – HSKHPHREṀ and Navātman. She is worshipped with the Siddhas who govern the letters of Navātman first. Then the Six Limbs around them. After that comes the eight petalled lotus. The goodesses of the syllables are worshipped in groups of eight along with Mothers and the Siddhas who govern the letters of Navātman. Thus the centre enshrines a complex and thourough union of the god and the goddess along with their component deities, energies and letters. Once this has been achieved the six parts of the Krama that radiate from that union as the 'pulsing energy of the Command' (*sasphurājñā*), are worshipped in the Hexagram. Vajrakubjī is worshipped in the middle of each of the six groups and in the centre of the Hexagram, as if this were a separate *maṇḍala* projected onto the one in the centre formed around the core Triangle. The .SSS enjoins:

> He should worship Vajrakubjeśvarī who resides in the Krama of Twenty-eight within the group of six in the middle conjoined with Ḍa (Ḍākinī), Ra (Rākinī), La (Lākinī), Ka (Kākinī), Śa (Śākinī), and Ha (Hākinī). (This is the group of the six restraints – *nigrahaṣaṭka*). He should worship (this) with the Kula Peak and the aforementioned seed-syllable of each one.
>
> (In this way, he should worship) the goddess who is mounted on the seat of AIṀ and is on the thunderbolt lotus (*vajrapadma*), she who has assumed six aspects (*ṣaṭprakāra*) and is said to be the one who is called Samayā.[1]

Samayā Kubjikā is the form of the goddess worshipped in the centre of the Triangle. When worshipped in the centre of the Hexagram she is Vajrakubjī. The former aspect is concerned with the Samayā, the latter with the magical powers and energies related to the worship of the Krama.

The Worship of the Krama with Siddhakubjī and Navātman

The rite continues with the second form of the *maṇḍala*. This one has two lotuses of eight and sixty-four petals on which the Eight Mothers and the Sixty-four Yoginīs are worshipped, respectively. This is the form of the *maṇḍala* of the

‘Sequence of Sixty-four’[1] a modality that is known to the later Kubjikā Tantras, including the KuKh, but not the KMT. In this setup the Vidyā is worshipped in the Hexagram along with the six parts of the Krama, not on a separate lotus. Thus it is ‘in the six parts’ rather than ‘made of six parts’. Siddhakubjī is worshipped in the centre with Navātman, that is, HSKṢMLVRYŪṀ. Siddhakubjī’s Vidyā is formed from the thirty-two syllables of the standard Samayā Vidyā which alternate with as many consonants in the normal serial order from K to S, thus:[2]

KA BHA KHA GA GA VA GHA TI ṄA A CA MBE CCHA HSKHPHREṀ JA HSKHPHRĪṀ JHA KU ÑA BJI ṬA KE ṬHA HSRĀṀ ḌA HSRĪṀ ḌHA HSRAUṀ ṆA ṄA TA ÑA THA ṆA DA NA DHA ME NA A PA GHO [KH: RGHO] PHA RĀ BA MU BHA KHE MA CCHRĀṀ YA CCHRĪṀ RA KI LA ṆI VA KI ŚA ṆI ṢA VI SA CCE ǀ

The parts of the Krama of Twenty-eight are arranged around this couple in the corners of the surrounding Hexagram beginning with the one in the north-east, moving clockwise, as follows:

The Eight Mothers of the Kulas

After worshipping the Krama in the hexagram, the Eight Mothers and Sixty-four Yoginīs are worshipped in the lotuses that surround it. The mantras of the Mothers begin with the Five *Praṇavas* and HSKHPHREṀ. This is followed by: 1) the name of the place where the Mother resides prefixed with '*śrī*–'. 2) The syllable KHPHREṀ. 3) The caste of her embodiment in that place suffixed with '*ambā*'. 4) The syllable KHPHREṀ. 6) A syllable formed from the eight short vowels with *anusvāra*, one each in serial order. 7) The name of the Bhairava. 8) The syllable KHPHREṀ. 9) A syllable formed from the eight long vowels with *anusvāra.* 9) The name of the Mother ending with '*-ambāpādukāṁ pūjayāmi'*. The first mantra is:

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUṀ ŚRĪPRAYAGĀKṢETRE KHPHREṀ KULAJĀMBĀ HSKHPHREṀ AṀ ASITĀṄGABHAIRAVA KHPHREṀ ĀṀ BRAHMĀṆĪ – AMBĀPĀDUKĀṀ PŪJAYĀMI ||

The following is a table of the directions of the corresponding petal of the lotus on which each Mother and her Bhairava are worshipped.[1]

The Sixty-four Yoginīs

The sixty-four Yoginī (here called 'great goddesses') are worshipped in the end on the outer lotus 'on top' of the *maṇḍala*. They are arranged in groups of eight set in the directions, each of which is governed by the corresponding Mother. The intimate connection between them is underscored by the utterance of the Mother's mantra first and then those of the eight Yoginīs she governs. The form of the mantras are the same. Each begins with the Five *Praṇavas* followed by KHPHREṀ then the name of the Mother or Yoginī in the dative prefixed with *'śrī-'* followed by the usual

The Krama of Twenty-eight of the *Ṣaṭsāhasrasaṁhitā*

The following is a translation of chapter forty-seven of the ṢSS. The ṢSS, like the ŚM, is an expansion of the KMT. Its six thousand verses include almost all of the 3,500 verses of the KMT. But there are chapters that are original, of which there are no equivalents in the KMT. This is one of them. The same is the case with the chapter in the ŚM dealing with the Krama we have just examined.

The Krama presented in the ṢSS is structured as is the one in the KMT into six groups of 4-5-6-4-5-4 and is closely related to it. However, although the Krama of the KMT inspired the one in the ṢSS, we find the version found in the ṢSS in other sources, not the one in the KMT. Muktaka, for example, presents it as the basic Krama of the liturgy he learnt from his teacher and presents it in his KnT. It is also found in chapter two of the *Kulakaulinīmata*. There it is considered to be the basic Krama which is common to all (*sādhārakrama*) the tradition. As such, it generates the most radiant form of the Command (*saṁsphurājñā*).[1]

The ṢSS refers to this same series three times.[2] Taking care to maintain essentially the same Krama, the ṢSS presents it twice, first in chapter two and then in chapter forty-seven, in such a way that the two versions suppliment each other. The former has already discussed by Schoterman,[3] so just a few words will suffice here. The Krama is presented the first time in the context of the production of the letters. These arise from the union of the male and female principle – Śrīkujeśa and Ānandaśakti – in the centre of the *maṇḍala*. The six parts of the Krama correspond to the six higher energies of the utterance of mantra. They are distributed evenly in the twelve finger space above the Cavity of Brahmā up to the End of the Twelve as noted in the following table.

30. Table of the Krama in Relation to the Energies Leading to the End of the Twelve

Group	Number	Principle	Location in the Body
Four Sacred Seats	Four	Transmental (Unmanī)	Forehead
Pentad of Knowledge (*Jñānapañcaka*)	Five	Equal One (Samanā)	Stream of Kula and Akula
Six Yoginīs (*Kriyāṣaṭka*)	Six	Pervasive One (Vyāpinī)	Place of the Jar (Ghaṭasthāna) – the Throat
Four Siddhas of the Seats	Four	Energy (Śakti)	Heart
Five Cakras	Five	End of Sound (Nādānta)	Navel
The Four Goddesses (*Devīcatuṣka*)	Four	Sound (Nāda)	Triangle in the Root – Kanda

These identifications and others in the presentation of the Krama in the ṢSS preserve the essential link between the Krama and higher metaphysical principles that is extensively elaborated in the presentation of it in the KMT. What one could call the concrete contents of the Krama, the divine beings and their mantras, are of relatively minor concern to the KMT, although of course, not ignored. The Krama of the KMT is not so much a liturgy as an object of contemplation of the subtle energies, states of consciousness and the processes at work through which they lead into one another and interact. The exposition of this complex dynamism takes up several chapters of the KMT.

It is also essential to know how the Krama is linked to the body and sustained within it by the Deity, who is the First Lord (*ādyanātha*)[1] of all its energies. Thus more space is dedicated in this Krama to the pyschophysical organism than the metaphysical principles. This is the where the individual soul leads the 'inner life' in its embodied state. Thus the exposition of the Krama is introduced by a warning that it is essentially to know the Krama in the body, not just in the outer *maṇḍala*. As Bhairava says:

> Disease, sorrow, fear, death and the destruction of the family certainly takes place by neglecting the inner life (*adhyātmā*). Therefore the Krama should be known both externally and internally by one who has devotion and not by others who are devoid of it. The fettered soul who worships the body, deluded does not know (its true

nature).[1]

In brief the Krama is as follows. The four seats are related to the four gross elements from which the physical body is made. The five goddesses of the second group are related to the five subtle elements of sound and the rest, that are perceived by the senses. This is called the ‘pentad of knowledge’ (*jñānaṣaṭka*). The following six (*nugrahaṣaṭka*) are related to negative emotive states and conditions which they cause, if ignored, and from which they liberate if worshipped with the proper mantras. The four Siddhas that come next represent the three humours of the body and their mix. Next the Five Jewels are the outer cognitive senses and the inner Wheels. The Four Mothers are the organs of action and the six Yoginiis the bodily constituents (*dhātu*). The Octad of Kula and the following group of eight are the remaining metaphysical principles that make up the set of thirty-six. Let us see now what the text says.

1) The Group of Four Sacred Seats (*Pīṭhacatuṣka*)

Oḍḍiyāṇa

> Oḍḍiyāṇa is within Ilā Kaulapura in the cavity (in the head) (*randhra*) situated at the extreme end of the cavities to the left and the right.[2] It (is spherical), the shape of a bud of a Kadamba (tree) (*kadambagola*) and is (subtle) like a bubble of foam. The sacred seat is situated there, (but even so) it pervades the body.[3] (16)

Jālandhara

> The sacred seat Jālandhara is located below Rudra and should be known to be within Carvīpura. He should savour all that falls from it. It is common to all people and there is no life without it.[1]

Pūrṇagiri

> O mistress of the gods, the sacred seat of Pūrṇa (the Full One) is in the middle of the town called Jīva (Living Being). (It is) a Wheel facing downwards. May it fill all living beings (from within). O mistress of the gods, the sacred seat of Pūrṇa is the foundation of the universe. One should fill all the universe, that is, the triple world with (all that) moves and is immobile.[2]

Kāmarūpa

> That subtle energy of passion (*kāmakalā*) whose source is Emptiness (*khamukhī*) is active (*yāti*) day and night. There, one should worship the (sacred seat) called Kāma which is in the middle of the Moon, Sun, and Fire.[3]

The commentary explains that: The sacred seat of Jālandhara is Carvīpura, the Kaula location of the glottis (*jālandharapīṭhaṁ [kh: jālā-] carvīpuraṁ [k, kh: carcī-] kaulaṁ lambikāsthānam*).

The word '*carvī*' is derived from the root '*carv*' 'to chew or taste'. In this centre the yogi relishes the vivifying nectar that drips from the glottis.

The commentary explains: The sacred seat of Pūrṇa is the town called Jīva. It is the Kaula (reality) that contains the inhaled and exhaled breath (*prāṇāpāna*) (*pūrṇapīṭhaṁ [k: -pīṭha] jīvākhyapuraṁ [k, kh: -pura] kaulaṁ prāṇāpānagarbham [k, kh: prāṇopāna-]*).

This sacred seat represents the vital breath, which is the essential nature of the individual soul in the body. Just as the individual soul, filled by it, lives in the body, similarly, his cosmic counterpart animates the universe.

2) The Five Pure Ones (*Vimalapañcaka*)

According to the ṢSS this group is called the Group of the Five Pure Ones (Vimalapañcaka).[1] However, the commentary calls it the Group of Five Aged Ones. It is also called the Group of Five Mahantārikās (Mahantārikāpañcaka)[2] as each one is 'in the place of Mahantarī'.[3] Thus these five goddesses are aspects of Kubjikā as Mahantārikā.[4] Their names are those of low caste or tribal women and they reside in the five subtle elements of the objects of the senses. As they are related to sensory perception, they are also called the Group of Five (forms of) Knowledge (Jñānapañcaka).[5]

> Cāṇḍālī, who is without beginning, is purity itself (*vimalatva*). Those men who belong to the tradition (*kramika*) should know that she resides in the town of the Kaula of Sound.

> Pulindī is there in the middle of the town of the Kaula of Touch. O goddess, she should be known by those who belong to the tradition in accord with the teaching that comes from the teacher's

The seat Kāmarūpa 'whose form is passionate desire' is the abode of the three lights that illumine the world and all living beings. The driving force of the will directs all activity. Deprived of intention and stimulus to action all would be in darkness. It arises out of the 'darkness' of the emptiness of pure transcendental consciousness and ultimately returns to it. Cf. above 28/143cd-145 and note.

The commentary on ṢSS 40/66 supplies the names of the Siddhas and consorts of these seats. There are two sets. The names in the first set are derived from those of the sacred seats. The second set are the Siddhas and consorts mentioned in the account of the seats in the second chapter of the KMT. The KnT (MS K fl. 22a) presents the mantras of this set, which it calls the Group of Four Lords of the Ages' (*yugādhipacatuṣkam*).

See intro. vol. 1, p. 635 for a table of the contents of the four sacred seats that constitute this part of the Krama. The parts of the Krama are related to the consonants and vowels. According to the commentary on ṢSS 40/66, the letters of the first group of four are Ka, Kha, Ga, and Gha. See ṢSS 2/16-20, 25 and comments by Schoterman (1981: 74 ff.).

Śavarī resides there in the town of the Kaula of Form (*mūrti*) in the manifest state of all the universe. She is impelled in the Kula teaching.

Campakā resides in the town of the Kaula of Taste (*rasa*) and tastes everything. She is the goddess who gives great satisfaction and (her) abode there is of two kinds.[2]

Kubjinī, who is established in the Rule, is the goddess who exercises her authority in the great location of the Kaula of Smell and is worshipped by the gods. Accompanied by the Siddhas (called) Anādi (Beginningless), Sarvajña (Omniscient), Yoga, Siddha and Samaya, they are said to be five. They should be placed at the beginning as Sound and the rest accompanied by the Pure One (*vimala).*[3]

The commentary explains: Then comes the Group of Five Aged ones which is as follows. The pure Mātaṅgī who is in the Beginningless Rule (*anādisamaya*) resides in the Kaula of Sound, that is, (in the subtle element of) Sound. Pulindī in the Rule of Omniscience resides in the Kaula of Touch (which is in the subtle element of) Touch. Form, Taste, and Smell.[1]

The commentary relates the five goddesses to as many '*samayas*'. The word literally means 'rule' or 'pledge'. The goddesses attend to their sensory spheres of influence, sustating their essentially spiritual essence as members of the goddess's Kula attending on her and acting in harmony with it. In other words, the world of sensory perception is part of the Krama and the 'body' of the goddess and the initiate who devotely worships this aspect of it as he does the others. The mantras of this group recorded in the KnT invoke the consorts of the five goddesses with these names. Thus the first is Anādivimalanātha and so on.

of the Greedy (*lolupa*). She makes the person who always acts (only) out of greed, suffer.

Maṇi Avvā is always present (in the Town) called the Conjoiner of All Things (*viśvasandhānaka*). She resides (there) as bondage (*bandha*) within gods, demons, and men. She breaks those who are on a false path and are devoid of devotion.[1]

O goddess, Suśirāvvā resides in the Kaula Town of Pride (*garva*). She quickly kills those who, penetrated with energy (*tejas*), are wrongly endowed with (too) much power (*tejas*).

Rantnasundarī resides in the Town of the Belly of the Fish (*matsyodara*). She binds those who are overcome with envy.[2]

The commentary explains: In this way the Hexad of Grace resides in lust, anger, greed, delusion, false elation, and envy.[3] This is said to be the group of six goddesses present in the body of Kula yogis. (The power of) these goddesses prevails in the bodies of mortals by lust, anger, greed, delusion, false elation, and envy.

These goddesses who reside in the body of those who are not absorbed in the contemplation of the supreme spirit (*brahmāniṣṭha*) and speak badly of the deity, fire, and teacher are angered and cause (them) to fall into a terrible hell because of (their) past conduct. (The does this especially to those who pretend to) devotees of the deity, teacher, and the fire and (even more so if they are) women.

One see those of the lowest and (most) degraded caste (*pukkasa*) and Brahmins and others of the (first) three castes who have devotion and are firm in (the fulfilment of their) vows with an equal eye.

These goddesses reside in the body and illumine the path to liberation. A mortal is led (by them) to Ahasta (?) where mother Kujā resides.[4]

4) The Group of Four Siddhas (*Siddhacatuṣka*)

> She who, having contracted (herself), enters (into the body) (and is bent over) is for this reason (the goddess whose name begins with) Ku (*kukārā*). O mistress of the God of the gods, she is present in all living beings in the process of the conjunction of the vital breath (*prāṇayogakrama*) (which serves to vitalize the body) of embodied beings. O mistress of the God of the gods, she is Sound and resides in the Void (of consciousness) (*kha*).
>
> Mitranātha is said to be the supreme deity (who presides over the) exit (from the body) (*niṣkāsa*). O mistress of the gods, Mitranātha is on the same level as Śrīkaṇṭhanātha.[1] He is together with the goddess when asking for the (boon of the goddess's) Command. Śrīkaṇṭha is called `Mitra' by virtue of the power of Śiva's Command (*śāmbhvājñā*). He is then Mitranātha in the family, which is the lineage of teachers. He is famous in the lineage of

Siddhas and is always present in the tradition (*anvaya*).[1]

O supreme goddess, he resides in the middle of the town of Vārdhikya. Vulgar men do not know their own sixfold nature (as the Krama) and (so) they profess to be teachers in (their) ignorance, deluded by greed. Present in the body of (all) people, he breaks apart even (the most) fierce (people, as a punishment for their wickedness).[2]

O great goddess, Oḍḍadeva resides in the town of Pilipiccha. (If) one behaves unjustly and keeps the company of the wicked he is angered and then, O goddess, he causes the body to wander about (aimlessly in distress).[3]

He blends (*śleṣayet*) the six constituents of the body together thus in every way. O supreme goddess, he resides in the middle of the Town called Śleṣma (Saliva). (Thus) because (he is) associated with the Town of the group of Six, he is called Ṣaṣṭhadeva.[4]

He moves in (the land of) Bharata (throughout) all that is made of words, (that is, all that each) living being (there) has named (*jīvasaṁjñaka*) and, O goddess, he worships everybody with the juices of the supreme nectar (of immortality). (Thus he is) then (known as) Caryānātha who resides in the Town of Sannipāta (the Aggregate). O supreme goddess, this should be known to be the group of four Siddhas.[5]

The commentary relates the first three Towns to the three humours – Vāta, Pitta and Śleṣma, which is more commonly called Kapha. The fourth Town consists of the aggregate of these three.

5) The Five Jewels (*Ratnapañcaka*)

The Houses of the mantras of the Five Jewels are the five Wheels (*cakra*) in the body. They are also present in the locuses of the five senses of perception.[1] The ṢSS continues:

> O goddess, the Town of the Foundation is the is the support (*āśraya*) of phenomenal existence. O fair lady, the Town of Tvagdīpti (Radiance of the Skin) is said to be (the Wheel of the) Self-supported. Go (Sight) is the Town of the god (of the Wheel of the City of) Jewels. One should know that the Town of (the Wheel of) Unstruck Sound in the body is Sarvasvādi (Tastes All). Now listen to what concerns the Pure (Wheel). (It possesses the Town) that transports the sense of smell and is present in the three channels (of the vital breath). This is the name of the Pure (Wheel). O fair lady, their division corresponds to (their) locations beginning with the anus (which is that of the) first (Wheel), (that of the Wheel of the) Self-supported, the Gem and (those located in the) heart and throat. O fair lady, one should perceive them thus in front (of oneself) objectively (*prameyeṇa*). This is the group of Five Jewels.[2]

The commentary explains that: The house of the (Wheel of)

6) The Group of Four Mothers (*Ambācatuṣka*)

The KuKauM calls this group the Group of Four Beautiful Women – *Sundarīcatuṣka*. These goddesses reside in four organs of action. The ṢSS continues:

> O mistress of the gods, Kuṇḍalyā resides in the Town of Vāsikā. The teacher who has not been pierced (by the energy of the Command) is said to be a fettered soul (*paśu*) (from whose boat his disciples fall) into the ocean of suffering. Kuṇḍalyā is angry there and causes (him) to fall into the ocean of hell.
>
> Mother Vṛddhā resides in the town of Pāṣaṇḍa and emanates all things. She is angry with the teacher who explains (the Tantras empowered) by a false Command. He is bound by his own hands and by the fetters of many kinds of doubts. Mother Bhīmā causes (the fettered soul) to wander in Bhīṣaṇa's location by the force of (his) sin. Mother Lambā kills (the sinner and causes him) to fall on the

The commentary explains: Mother Kuṇḍalī resides in Vāsikā Kaula in the location of speech. Mother Vṛddhā resides in Pāṣaṇḍa Kaula in the location of the hands. Mother Bhīmā resides in Bhīṣaṇa Kaula in the location of the feet. Mother Lambā resides in the Kaula of Pāyu in the location of the anus (*pāyu*). In this way the group of four mothers (*ambā*) is in the location of (the organ of) speech, the hands, feet, and anus.[2]

The Fierce Group of Six Restraints (*Ugranigrahaṣaṭka*)

The goddess who is the abode of these six (groups) is called 'Twenty-eight'. She destroys the delusion of the mind and should be known through the teacher's instruction.

In this context, I will (now) tell (you about) the group of six called that of the goddesses. O beloved, listen carefully (to an exposition) of the great group of six which serves to chastise (and control others) (*nigraha*). Ḍākī resides in Kṛtti Kaula and Rākī in the Rāsaka Kaula. Lākī resides in the Māṁdhātu Kaula (of the flesh constituent of the body), while Kākinī is in the Meda Kaulika. Śākinī is in Aṅgavāha and Hākinī in the great Town of Śukra. The seventh is the goddess Yakṣiṇī who resides in the great Town of the Moon. O mistress of the gods, these goddesses are the mothers (*mātṛ*) of the Fierce Group of Six (*ugraṣaṭka*). They are the protectors in the Kula teaching and reside in the bodies of all (living beings).[1]

(These) six goddesses gobble up (part by part) progressively the seven bodily constituents (*dhātu*) of those teachers who are cheats and are cruel, who have not been pierced by the transmission (of the Command) (*vedhasaṁkrāma*) and so, ignorant of the teachings of the Āgamas, explain the scriptures in another (incorrect way). They cause those wicked men to fall into the great and terrible ocean of hell.[2]

The commentary explains that: Ḍākinī in Kānti Kaula is in the location of the skin. Rākinī in Rasa Kaula is in the location of blood. Lākinī in the Māṁsa Kaula is in the location of flesh. Kākinī in the Maṇicandra Kaula is in the marrow. Śākinī resides in Aṅgavāha Kaula and is in the fat. Hākinī in the great Śukra Kaula is in sperm.[3]

The Octad of Kula

The physical body, its senses, humours and vital constituents is now complete. What remains are the mental and higher principles up to Śiva. These correspond to the following two groups of eight. The first is the Octad of Kula that consists of the eight Mothers (*mātṛkā*) who reside in the three mental organs and the following five Principles. The ṢSS continues:

> Out of (all) the sacred seats, Brahmāṇī resides in the seat of the mind. She brings about emanation which is of many kinds by many means. O Kauleśī, the Great Mother (Mahāmbikā) resides in (the seat) of those who act in the intellect (Dhīcara). She does many things by many means.[1]
>
> Kaumārī, who has many forms, resides permenantly in the town of Ahaṁkaula. Endowed (with all) the attributes of (spiritual) wealth, she plays in many ways. The goddess Vaiṣṇavī resides permanently in Pracaṇḍa Kaula, protecting the entire universe from the Fire of Time up to Śiva.
>
> The goddess Vārāhī resides in the town of Puṇḍarīka. Indrāṇī resides in Rājīva and inspires passion (*rañjayet*) in all people. The fierce Cāmuṇḍā (resides) in the middle of Niṣedha Kaula. She binds those who lack devotion with nets of impediments of many kinds.
>
> Mahālakṣmī, who bestows great enjoyment, generates all that is made of words and resides in the middle of the Town of Kalyāṇa. The one called Kukāra (i.e. Kubjeśa), who is Bhairava himself, resides in the town of Kaṁkāla[2] and, the destroyer of the mass of fetters, he shines in the midst of the troupe of Mothers.[3]

They quickly fulfill the desires of those who, belonging to the Kumārī Yoginī Kula are devoted to the goddess, the fire and the teacher and are, amongst all people, devoted to women, Brāhmaṇī and the other (Mothers).
>
> (But these same goddesses), residing in the body (of those who even though they) belong to the Kumārī Yoginī Kula speak falsely and are averse to both the deity (*brahmadveṣṭa*) and to people, are angered and devour these wicked souls with the rays (of their divine power).[3]

Kamalā is in the town of Vidyut and Kubjinī resides in Kaula. Barbarā is here called Vidhi in Śuddha Kaula. Bahurūpā is in the (the Town) called Īśa and Mahantā resides in the Town of Kha. Kuṁkuṇā is where the town of Śakti Kaula is located.

O noble lady, these, the six towns in the six limbs, have been told to you. These goddesses who reside in the six limbs protect devotees (but) are angry with those who lack devotion, are cheats, cruel and preach false doctrines.[1]

The commentary explains: Kamalā (resides) in the Kaula of the town of Vidyut which is the location of (the principle of limited) knowledge. Kubjinī (resides) in the Kaula of Māyā which is in (the principle of) Māyā. Mother Kuṁkuṇā resides in the town of Śuddha Kaula in (the principle of) Pure Knowledge. All this is the Krama of six parts which pervades (all things) in the Kula.

The first (of all the) Siddhas (*ādisiddha*) has three locations as does the supreme Kubjinī. These three locations are in the End of the Twelve and are as follows. (They are) the locations of Īśvara, Sadāśiva, Śakti, and Śiva. She who consists of the thirty-two lettered Vidyā is called Kubjinī. The First Lord (Ādyanātha) is Navātman. The Three Places do not have a form as do (the lower) adventitious realities (*āgata*). Thus those two are beginningless and well known.[2]

Vaṭuka and the guardian of the field, reside in the town of Ulkāmukha. (Vaṭuka) bestows accomplishment to the adept (if) he is devoted to the teacher, not otherwise. He casts down into hell one who despises the deity, fire and the teacher.

Again, O mistress of the host, Gaṇeśa resides in the great town above the anus. He removes the obstacle the Yoginī (creates) for one who is devoted to the deity, fire, and the teacher and is devoted to the knowledge of the Self. O beloved, he causes those who despise women and Brahmins and who, most sinful, take pleasure in quarrelling, to fall into the terrible world of transmigration from birth to birth.[1]

The commentary explains: Here (in this context) the location of Vaṭuka is the town of Ulkāmukha which is at the extremity of the penis, where the aperture (*cchidra*) is located. The guardian of the field is also there. Gaṇeśa is above the anus. This is the Krama.[2]

The text of the ṢSS, it seems, does not coincide with the explanation of it in the commentary. The layout presented in the table, with six goddesses ranging from Kamalā to Kuṅkuṇā, corresponds to the one in the ṢSS. The commentary omits the penultimate two goddesses and shifts Kuṅkuṇā up to the third place, leaving the last three empty. The three goddesses are treated, it seems, as aspects of Kubjinī. The last three locations are in the End of Twelve. They are those of the three highest principles – Īśvara and Sadāśiva together with Śakti and Śiva combined. These are considered to be aspects of Ādisiddha who, unlike the lower realities, is unconditioned. As such, he and his aspects do not have locations – Towns – in the way the principles below do and so, according to the commentary, they are not mentioned. However, nothing of the sort is suggested by the text of the ṢSS that has come down to us. It possible, therefore, that the commentator had a variant form of the text before him.

Appendix X

The Worship of the Scripture

The worship of the scripture is an important part of the liturgy. The rite is already extolled in the KMT, although only described briefly. It is amplified in the ŚM, ṢSS and MBT. In the ṢSS, as here and in the YKh (cited below), it includes the procedure for the copying of the text and the transmission of its meaning. The way in which scripture should be copied is a topic also discussed in Siddhānta Āgamas as well as Vaiṣṇava and Buddhist Tantras. However, the earliest Kubjikā sources, the KMT and the ŚM, make no mention of it. While the dictation and writing of the scripture may not originally have been part of the rites of initiation, its worship was an important part of the regular rites from the beginning. Thus it is described in the very first chapter of the *Śrīmatottara* and the third of the ṢSS, after an exposition of the *Kramamaṇḍala,* as it is here in the KuKh. Although details vary, the rite is recognisably the same. The one described in the beginning of the ŚM is as follows:

> First, a golden jar is placed on level ground that has been smeared with cow dung, strewn with flowers and well fumigated with sacred aloe. (It is then) filled with liquor (*ali*), covered with young mango leaves and wrapped in a sacred cloth. It is smeared with sandal paste etc and, well fumigated with sacred incense, a lamp is offered to it (*dīpotsava*) with a food offering (*naivedya*) and a bell is loudly rung before it.
>
> One should worship the Kumārīs there along with Kumāras and Yoginīs, the teacher and one's elders, the senior initiates in the lineage and other servants (of the deity) (*praticāraka*). One should worship (them) with many kinds of clothes and ornaments.[1]

First, one should worship the teacher with beautiful and sacred clothes, a straw mat, gold bracelets, necklaces and rings with supreme devotion and not be stingy. The Āgama should be worshipped devoutly with jewels and corals. Then, after offering three handfuls of flowers with golden lotuses, it should be wrapped first in white cloth and then with pieces of black, red, yellow and blue cloth and (then) with one of all colours as the sixth. (The Āgama is then) placed on a divine seat (*pīṭha*) with beautiful (offerings) shining with gold. One should (use) blindfolds, necklaces of pearls and jewels along with beautiful ornaments to adorn it. It is covered with an awning and adorned with a bell and chowrie. One should offer vessels of liquor and three kinds of meat to it. (The teacher) should explain and write it with special (care) in a solitary place out of sight of the uninitiated. This should be done in accord with the prescribed method and not otherwise.[1]

I will tell you the troubles one who is devoid of the prescribed method suffers. There will be quarrels, worry, strife, disease, fever, harm from attacks by (enemy) kings, loss of wealth and suffering. Kites (*cilla*), crows, ravens, pigeons and jackals that howl terribly rise and enter his house.[2]

The worship of the scripture is so important that the KMT concludes with a section concerning the sacred days when it should be worshipped and a list of Kaula substances that are offered to it. For, as the KMT (25/221ab) says: ‘When the scripture is worshipped, the (entire) ocean of knowledge is worshipped’.[1] Similarly, following the lead of the KMT, the ŚM ends with a lengthy eulogy of the worship of the scripture and how it should be done. Bhairava is speaking:

> O Mother of the Kula, listen, to the merit of one who, free of deceitful (desire for) lucre, causes this, the King of *Matas* to be written out of devotion, in accord with the method prescribed by the Āgama. The merit of gifting millions of cows and (that) of hundreds of millions of sacrifices and (the merit) one gains by being consecrated with (the water) of all the sacred bathing places is present in the teaching (*naya*). One possesses that (same) merit by writing the *Śrīmatottara*. O goddess! (One acquires) the fruit of a thousand horse sacrifices and a hundred *Agniṣṭoma* (sacrifices) by writing the *Mata*.[2]
>
> O sinless one! the Tantras I have uttered, born of the five currents (of scripture), are not worth a sixteenth part of the King of *Matas* (*matarāja*). O goddess, the country in which there is (a copy of) the venerable *Matottara* is pure (*pūta*) and the town (that has one) is equal to a sacred seat. O goddess, (one's) house (becomes) Candrapura (itself) by the power of the King of *Matas*. O mistress of the gods, he who, endowed with devotion, having praised (this) the foundation (*utthāna*) of the *maṇḍala* at the three times (of the day) worships (it), attains, O mistress of the gods, the plane of the Skyfarer. The emperor is pleasing to (his vassel) kings. (One's) health, good fortune, fame and reputation grow. O (goddess) praised by heroes! He obtains all (his) desires (only in this way and) in no other.[3]

O goddess, according to the declared injuction of the scripture (*āgama*), listen to the fruit which is the merit one (accrues) who, endowed with faith, causes (the scripture) to be installed in the proper manner (*vidhinā*). The fruit that one attains, having donated all (one's) wealth of countless millions of gold coins, is the fruit (found) in the *Śrimatottara*. What is the use, O mistress of the gods, to describe again and again the auspicious (merit one) possesses who has (a copy) in his house that is worshipped and pondered. (It may be worshipped) at (all) three times (of the day) or one time (daily) with many kinds of fragrant flowers.[1] [. . .]

O goddess, it is (to be) worshipped regularly with camphor and other such things, (pieces of) sandalwood, vermillion and the like, incense, perfumes, divine musk and the like. And after worshipping (it), (one should worship) eight virgins (*kumārī*), four, two or (just) one. The glory (*śrī*) of one (who does this) always increases and he is always happy. The Yoginīs who are the goddesses that move in the sky (*khecarī*) and on the earth (*bhūcarī*), those Born of Yoga, of Kula and, especially, the Innate (*sahajā*) ones always abide intent on (giving him their) blessing. The deities are satisfied with him and give him whatever he desires. O god, as long as he lives, he is happy, and at the end (of his life) he goes to the supreme plane. O lord of the gods, (this) has been explained to you in brief in the *Śrīmatottara*.[2] [. . .]

One is free of all impediments, suffering, the opposites, and there is no fear from (any) enemy. One obtains all (one) desires and the fruit of all accomplishments. Here the ŚM ends. Chapter 20 of YKh (1) is called 'the prescribed method for worshipping the *Śrīmata*' (*śrīmatapūjārcanavidhi*). It begins with a section that describes the iconic form of Bhairava who embodies the *Śrīmata*. The goddess continues saying:

> Next I will explain how the *Śrīmata* should be worshipped. One should make a pure, even square, well smeared with the five substances. A jar is placed in the middle and then filled with liquor. One should deposit four clay auxiliary jars (*vardhanī*) in the four directions along with it. All four (should) be filled with water and contain cloth and gems. They should be worshipped with the sacred seats by means of the (energy of the) Command (that comes from) the parts (*pada*) and syllables (*piṇḍa*) (of their mantras). The jar in the middle is on top of a *svastika* and having placed it (there, wrapped) with a blindfold (*netrapaṭṭa*), one should worship the pure

After that one should commence the sacrifice in a solitary, beautiful place, free of thorns and animals, as before, in a hidden pavilion where there are no sunrays. (The teacher) should introduce his disciple through the western door. The god faces north and the teacher west and he should worship the *Mata* with his left hand and with the Vidyā. Lit lamps should be waved (*āratī*) after having arranged a row of lamps (in front of it). (He should) salute it with great devotion and repeated prostrations. The virgin Yoginī should be worshipped. She should be worshipped in secret according to the prescribed method. Then one should eat the sacrificial pap filled with meat (*dīpaka*) and liquor. Having done that one should offer one's wealth and, desirous of accomplishment, receive the benediction of the assembly (*cakra*).[2]

Whether a Yoginī or a virgin, (she should) place the *Mata* in his hand. He should take it with (a bow of) the head and (say) with faith 'be propitious and forgive (my sins)'. Then (the teacher) should cause it to be done according to the prescribed method, whether it is to be written (if it is the scripture) or not written (if it is the explanation). O god, having worshipped the great wheel with offerings of money, gold, cloth and the like, (in this way) both will certainly be free of troubles. Then, having prayed to the teacher for forgiveness, he should offer (his) wealth (to him). By taking the blessing of the assembly (*cakra*) it bestows accomplishment. [. . .]

The *Mata* should be worshipped in the course of the sacrifice and in particular, on sacred days, when going on a journey, when making love (*smarakāla*) and during a consecration ceremony. O god, worshipped, it certainly gives what one desires. It (gives) six times more merit than the sacrificial area, fifty times more than a Siddha Liṅga, 500 times more than a Bāṇa Liṅga and 100,000 more than a self-generated one.[1]

(The accomplishment attained by) the worship of the scripture is endless. Therefore one should worship the Kulāgama. One should worship with faith (the scripture) of 125,000 (verses), or that consisting of half the number, half again, half or a quarter of that. (He who does so obtains both) worldly benefit and liberation and is certainly Bhairava himself. The Maṇḍala of the Teachers (*gurumaṇḍala*) should always be worshipped and praised at all three times (of the day). Mantra and (its) parts (*pada*) function wherever there is the *Śrīmata*. All that is equal to a sacred seat by virtue of the power of the King of Matas (*matarāja*).[1]

Thus, it should be protected with effort and not given without having tested (the recipient). O god, the merit that comes from the erection of Liṅgas and millions of sacrifices (or) when the renovation (of a temple) has been completed (or) the sacred seat is worshipped regularly in the land of Bhārata on a Kula mountain, is acquired by one when the *Śrimata* of 24,000 (verses) is present (before him). The Command of the goddess is that there is no merit (to be found) in any other *Mata*.[2]

CHAPTER THIRTY-ONE

The Initiation by Piercing (*vedhadīkṣā*)

Initiation and Initiates

Śrīnātha said:

O Great Goddess, I have understood the method enjoined (for the copying and explanation of) the Kula scripture. Now, in due order, I want to hear the prescription concerning initiation. I wish to know this, the essence of the Western Tradition. Everything (comes) after initiation – the rite of adoration (*pūjā*), the scripture and the *maṇḍala*. (1-2)

Why is the word '*dīkṣā*' used (to mean initiation). By (your grace) please explain this (to me). (3ab)

The venerable (goddess) Vakrā said:

O Lord, listen, I am speaking. I will explain (the true nature of) initiation to you. It is called '*dīkṣā*' here (in this world) because it has the power to `give' and `destroy'. It gives (*dīyate*) the essence of knowledge (*jñānasadbhāva*) and destroys (*kṣīyate*) the cage of the fetters.[1] (3cd-4)

Śrīnātha said:

How many kinds of piercing (*vedha*) are there?[2] Where should it be applied? What is the power of the Command and the purification of the impurities of the fettered? (5)

How is the follower of the Rule (*samayin*), the spiritual son (*putraka*) and the adept (*sādhaka*)? (What is) the state of the teacher (*ācārya*)? In brief, (what is) the teaching concerning the four stages of life (*āśrama*)?[3] O mistress of the gods, tell me all (this) if you are pleased (with me), O Crooked One. (6-7ab)

The Four Types of Initiate

The venerable (goddess) said:

Now, a man attains the status of a follower of the Rule by the (purifying) consecration (*saṁśeka*) of the sacrificial vessel, by seeing the worship of the Krama (*kramapūjā*) or hearing the rules. (7cd-8ab)

He attains the status of a spiritual son through the rite of the stick for brushing the teeth.[4] An adept in the Teaching (*śāśana*) of the Siddhas is one who has been consecrated and pierced (by the power of grace). (8cd-9ab)

The teacher (*deśika*) should be a man to whom (a correct) understanding of the knowledge (of the tradition) has been transmitted. (He should be) well versed in the Current of the Krama, consecrated and know the state of total liberation.[5] (9cd-10ab)

Types of Initiation by Piercing[6]

Now, (I will tell you) something else, namely, the supreme secret which is the most excellent knowledge of (the various types of) piercing (*vedha*). (10cd)

Here it is said that the piercing process (*vedhakrama*) is divided into (two phases, namely, the piercing that takes place) below (in the lower centres) and (the one that takes place) above (in the upper centres).[7] (11ab)

Varieties of the Lower Piercing

The Piercing with Mantra, the one called (the Piercing with) Sound after which comes the Piercing with the Drop and (the Piercing with) Energy, the Piercing with the Snake and the one said to be supreme. (This) is said to be ‘piercing’ (*vedha*).[8] (11cd-12ab)

The Piercing with Mantra

The Piercing with Mantra (takes place) by contemplating (*paribhāvana*) the Wheels and the rest (in conjunction) with mantra.[9] (12cd)

One should visualize (*dhyāyet*) the excellent Wheel of Six Spokes surrounded by a garland of flames. Or else, (one experiences) pervasion (*vyāpti*) within the Twelve-spoked (Wheel) in conjunction with the retention of the breath. (The teacher) should awaken the mind of the other (i.e. his disciple). (This) is said to be the Piercing with Mantra.[10] (12cd-14ab)

The Piercing with the Drop

O Great Lord, there is a light in the Wheel of the Heart which is full of the flames of the Drop. One should awaken the disciple with that. This is said to be the Piercing with the Drop.[11] (14cd-15ab)

The Piercing with Energy

O handsome one, the Empowered (Piercing takes place) once one has projected forth (*samuccārya*) Energy by the upward movement. Kubjikā, whose form is crooked, sits on the seat of the Water Chestnut. Her form is that of a lamp, like a flame (*śikhā*). She should be led upwards from the Foundation onwards. (15cd-16)

With the mind and limbs firm, pierce the entire universe. The Empowered Piercing is said to be the mighty force that wanders in the (Cosmic) Egg (*bhramadaṇḍamahāvega*).[12] (17)

The Piercing with the Snake

She is this Supreme Energy who brings about the expansion of Supreme Bliss. Adorned with the five groups of five,[13] she travels from the Abode of Birth to the Supreme (Place).[14] (18)

O skillful one, these (pentads ranging) from the Supreme Principle are (firstly) the Pentad of Energies (*kalāpañcaka*). (These five are) Vyomā (Sky), Śāntā (Tranquil), Vidyā (Knowledge), Pratiṣṭhā (the Established One) and Nivṛttikā (Cessation).[15] (Again), the subtle (goddess who is) supreme nectar (is) Nandā,[16] Bhadrā (Auspicious), Jayā (Victory), Riktā (Empty) and Pūrṇā (Full). She is endowed with the Pentad of Kula, adorned with the Pentad of Space and, conjoined with the Pentad of Brahmā, is endowed with the Five Causes.[17] (19-21ab)

In this way, (the goddess) with five aspects, has emerged from the Abode of Brahmā. Reposing in the Abode of Brahmā she appears in the form of a lightning flash. She who is well-established (*pratiṣṭhā*) should pierce the body and awake the Supreme Self. This is the way the Piercing by the Snake is explained in the Kula Teaching.[18] (21cd-23ab)

The Piercing (with its different types) such as the Illuminating (Piercing) (*saṁsphuraka*) is said to be the Path of Energy and of the Parts (*pāda*). O god, it should not be told to anybody but should be kept secret with great effort. (This) secret is more secret than secret and should be protected as one does (one's own) body. (23cd-24)

The Supreme Piercing

O Lord of the gods, when the mind ceases, (that) is said to be Supreme Bliss. (In that state) there are no senses, vital breath or field of the inner (mental) senses. There is no mind, no object of the mind nor cogitating subject (*mantṛ*). When all phenomenal existence (*bhāva*) ceases, that is said to be the Supreme Piercing.[19] (25-26)

I have told you all this out of supreme devotion (for you). It should be kept concealed with effort, as one does wealth from thieves. (27)

Entry into the Centre takes place by the movement in the Centre. The (Goddess of the) Centre (*madhyamā*) is Rudra's energy. One should squeeze (it) above and below.[20] (28)

Then the vital breath (*prāṇa*), in the form of a Drop, should be applied to the Tip of Energy (*śaktyagre*). The Self should mark that Form which is subtle like (the light of a) firefly.[21] Commencing from the big toe of the foot (it moves upwards until it) enters the Undefinable (*alakṣyalakṣita*). Rudra's energy should be applied up to the location of the navel.[22] (29-30)

She is in the citadel whose form is (triangular like) a water chestnut.[23] Her shape is (round like) an earring (*kuṇḍala*). She is subtle and rotates (on herself constantly). (Her) light is like a garland of flames. One should visualize her within the centre of all the cavities (of the body) as burning fiercely. (31-32ab)

If Energy abides (even) for a short time in the body within the cavities,[24] a state of swoon (*mūrchā*) arises which is (the initial experience of) universal pervasion. (When that happens the adept) invariably shakes as does a tree cut (down from the) root.[25] Fearless (of pain) (*niḥśaṅka*) and distraught, he falls (senseless) to the ground, like a stone. Then, pervaded by the energy called Amṛtā (Nectar), the Full Moon, he regains consciousness. (32cd-35ab)

Varieties of the Upper Piercing

Entry Through the Cavity of Brahmā

The lower piercing has been explained; now listen to the upper piercing. (35cd)

Once one has fixed the mind within the Transmental, then the Supreme (Energy), in the form of the Equal One (*sāmana*), fills the entire universe, up to the end of the seven worlds. (36)

The Pervasive (*vyāpinī*) Energy is at the end of that, on the peak of the triangle (*śṛṅgāṭa*)[26] of Meru. She resides in the Aperture of Brahmā and is as pure (white) as snow, the jasmine (flower) and the moon.[27] (37)

Within the conjunction between the Sun (Ha) and the Moon (Sa), (her) form Space, (she is) the seat of the Elements. Penetrating into the middle of the lotus of the navel, she has emerged as Unstruck (Sound).[28] (38)

O god, contemplate the subtle Supreme (Energy) within the channel of the throat in the form of a snake until she enters the Aperture of Brahmā. (39)

Once merger has been brought about there, the Self should perforate the Door of Brahmā. (Then) the Full Moon in the form of (the divine) will (*kāmarūpeṇa*) becomes the New Moon. (40)

She is a great flame of fire and her tongue is a lightning flash. She emerges out of the Principle of the Foundation and (moves upward) by means of the Upper Cavity until she reaches the deity's (*sādhya*) head. Her form is like that of (all the) twelve suns (of the year). Her light like that of the Doomsday Fire (*pralayāgni*).[29] (Thus the process) that reveals all knowledge (whereby) the Centre is draw towards oneself (*ākarṣaṇa*), has been explained.[30] (41-42)

Entry through the Beak of the Crow

The Supreme Energy moves up joyfully (*ullasantī*) through the Six Wheels and the Sixteen Supports. Located in the encapsulated Cavity of the Beak of the Crow,[31] she destroys the aspect (which relates to the manifest, differentiated) letters (*akṣapakṣa*). She, the Supreme (Energy), pierces the Drop in the centre of the palate at the End of Sound. (43-44ab)

Kuṇḍalinī

In the form of a crow (she is called) Kākinī (the Female Crow). In the form of a gander, she is Haṁsinī (the Female Gander).[32] (44cd)

Mistress of the universe, who destroys the universe, she is the female swan (who swims) in the lake of transmigratory existence. She is that subtle Transmental (Energy) who uproots all duality. (45)

She is the Yoginī who was in the past, is in the present and will be in the future. Then by her own (free) will, she is the universal (Energy) of the Wheel of Khecarī. (46)

O you who are praised by the Heroes (*vīra*), above that is the Accomplishment (of the energy) of the Skyfarer (*khecarīsiddhi*). She moves in the Sky and is (herself) the movement in the Sky. She is in the middle between the one who moves in the Sky and the movement. (47)

She is Khageśī (the Skyfaring Goddess) who is (both) the Void (*kharūpā*) and Kubjikā, the Supreme (Energy) who moves in the Void. She, Khageśī, is sixfold and (as) Suṣumṇā, she is the Void *(vyomarūpiṇī*). (48)

Again and again the yogi sees many kinds of Siddhas there.[33] Above that is the clearly evident abode of liberation. Having penetrated (into it), the divine yogi should fill (that) most excellent energy with effort and enter the Pure Principle, which is pervasive, free of the qualities (*nirguṇa*) and supreme. (Therein) is omniscience, perfect satisfaction and the abode of beginningless consciousness (*bodha*). (49-51ab)

The (yogi) who is ever intent (*yukta*) should contemplate (therein the Principle) which is free, eternal, never destroyed, endless, perennial, stable, pervasive, within the Void (*vyomarūpānta*)[34] occupied by the endless Lord (*anantanātha*), extremely subtle, supreme, tranquil, free of going and coming,[35] dense (and uninterrupted) like the sky. It is stainless (*nirañjana*), supreme, tranquil, unchanging, *Nirvāṇa*, generated out of Kula, Kula (itself), Kaula, Akula, both supreme (transcendent) and inferior (immanent). (51cd-54ab)

And she is the (goddess) Raudrī I have told (you about who is brilliant) like the sun freed from Rāhu (who obscures it). The constantly attentive soul should contemplate her, whose light is like that of the Doomsday Fire, brilliant as a hundred million suns, until by means of (that)[36] energy he dissolves away. There he views the plane (*caraṇa*)[37] of the Rudras constantly. The yogi who always practices in this way should mark (her) there. (56)

Another Ascent

The Navel

The Flame (*śikhā*) (is Kuṇḍalinī) who, similar to the flame of a lamp, has emerged from the centre of the navel. She is seen there in the centre, her form (like) a spark from a fire.[38] (57)

The Heart

She emerges out of the Drop and scintillates with her own radiant energy (*tejas*). In (the phase of) entry, once (the yogi) has conceived (her through meditation) she resides in the heart. (58)

The Throat

From there, like the flame of a (well) oiled lamp, she crawls upwards. She should split apart the subtle thread (of Suṣumṇā) which is like a radiating Liṅga.[39] (59)

I am the goddess who resides there in the form of a hunched-back woman.[40] (Her) form subtle, she rests when she reaches the throat's cavity. (60)

The End of the Twelve and Ultimate Realisation

She exits upwards through the field of the cavity of the palate by the path of the door of the uvula into the sphere of the Drop called the Krama.[41] Then one should perceive (*lakṣayet*) (her) in the centre of the Drop. There is a Sound there of many forms. (61-62ab)

That Energy (*kalā*) that exits upwards above the Drop is Kālakarṣinī (the Attractrix of Time). Her nature and form is light that shines like a smokeless burning coal.[42] (62cd-63ab)

She is Nirvāṇā (Cessation) and is called the Form of Peace (*śāntarūpā*). In the form of a snake, she sleeps.[43] The unmanifest (*nirābhāsā*), she is the beautiful light within the End of the Twelve. Devoid of inhalation and exhalation, her form is the flow (*dharā*) of the Void of Sound (*śabdāmbara*). (63cd-64)

The Supreme Principle is devoid of Sound (*niḥśabda*). It is said to be the Place of the Unmanifest. Once the yogi reaches that place, he is endowed with divine qualities. (65)

His mind has abandoned the world of transmigratory existence and his form is (the transcendental) Void.[44] He has entered the divine body (of the deity) and possesses divine power (*tejas*), sight and knowledge. (66)

He knows the three times and his form is that of unseen knowledge. He is himself the agent and the destroyer and assumes (whatever) form he desires. (67)

He observes (the Kaula's) vow (*vratin*), he performs divine works and knows (the supreme state of) Yoga at all times. Once he has left (the body) by means of the Three Cavities, (the Drop) becomes perceptible. (Its) form is (round like) the bud (*golaka*) of a Kadamba (tree) and is luminous with radiant energy (*tejas*) like the solar orb. (68-69)

He should mark it attentively (*lakṣayet*). The subtle Flame, which has come forth through the Three Doors, penetrates through the Sun, the Moon and the Circle of Fire, which is the third. It then merges into that Circle shaped (like) the bud of a Kadamba (tree).[45] (70)

(The energies of) will, knowledge and action (are located) there (along with) Brahmā, Viṣṇu and Maheśvara. The hosts of gods are all there and there are (many) mountains, forests and groves.[46] (71)

Then he should see the three lines at the great junction at the end of the Great Nose (*mahānāsa*). He should deposit the Trident of Knowledge onto water or ashes.[47] (72)

The Fruits of Attainment

A direct vision of the Goddess through the senses is only (possible) by attaining this. In that very moment (she) pierces through (all) that is moving and immobile in the universe.[48] (73)

The power of his Yoga evokes the modalities of motion, penetration (*āveśa*), trembling and the pulsing field of lightning, whether the conch and the jar (to which one offers) the handful of flowers are directly apparent to the senses or not. (74-75ab)

Then that man (becomes) a Siddha and he achieves unconditioned success. (He acquires) a divine beauty and the eight (yogic) qualities including the power to make himself small at will (*aṇimā*) and the rest.[49] (75cd-76ab)

O handsome one, the (yogi) who has managed to pierce (through the inner centres) acquires yogic power (*siddhi*) from ghosts, Vetālas, Yoginīs, Guhyakās and the Mothers (*mātṛkā*). (76cd-77ab)

The yogi pierces through everything, a lotus leaf, a fruit, water, the immobile, the moving things, wood, iron and stone. There is nothing higher than this in the three worlds. (77cd-78)

O god, once one has known the process of piercing (the inner Wheels) (*vedhakrama*), which is hard to acquire in the Three Worlds, one should pierce the mantras and Tantras by gazing at the Supreme Principle. (79)

The Energy called Amṛtā (Nectar) has come forth out of the womb of the Moon. Once it reaches the Aperture of Brahmā, it should (go on to) pierce through the inside of the worlds. (80)

The piercing (motion passes) through every single world. One should recall it in each corporeal form (*vigraha*). The Great Piercing takes place in (all that has) shape; within (one's own bodily) form it causes trembling. (81)

The piercing born of smoke takes place within the smokeless.[50] (The wise) know that (the piercing that takes place) by means of the Sun is born of the Sun. O Great Lord, it is said that your Intense Piercing (takes place) in the Nameless (*anākhya*). (82)

In the same way, the Great Piercing which is Light (takes place) by means of the Firefly.[51] The piercing of the Drop (takes place) within Sound and the third one within Energy (*kalā*). (83)

There is the Piercing of the Jar (that is the body), the Great Command (*mahādeśa*) and the Piercing of the Sky. Again, there is the fierce Piercing of Energy which brings about many wonders. (84)

A Sound (*hakka*) full of Energy arises within the Wheel of the Void. One should (then) recollect the net of letters (*varṇajāla*), that pervading (all things), is established in the Word. (85)

(The yogi) should make an effort to perceive the mind, the intellect and the ego through all the cavities in the Supreme Abode, (namely) the heart, the throat and the centre of the palate. (86)

When (the Plane) at the extremity of the Nose (*nāsikānta*)[52] has been attained, then do what you like. O handsome one, he should pierce through trees, stones and wood. (87)

The Wooden Piercing (*kāṣṭhavedha*) takes place with difficulty (*kāṣṭhena*) and that is devoid of knowledge (*jñāna*).[53] (88ab)

O god, the knower of Yoga who has attained the goal in this kind of yogic practice, makes all things visible to the senses wherever (that energy) is applied.[54] O Maheśvara, one who has accomplished Yoga becomes Bhairava himself. (88cd-89)

By the power of my Command he is always devoted to the Kulakrama and his consecration has taken place in the House of the venerable City of the Moon. (90)

The Nine forms of the First Teacher and the Lineages of Teachers

[55]The one called Kucandraśekhara who, very powerful, is the bearer of the Command is Śrīnātha, the one called Mitranātha, Śrīkaṇṭha with the name Tūṣṇī(nātha), Ṣaṣṭha(nātha), Oḍīśācārya, the one called Sadā(śiva) (Sadākhya) and the great Piṅgala. The Lord (*nātha*) assumed nine names by gazing on the Tamarind Tree.[56] (Thus) the ninefold Principle, which is the house of the world and the abode of the gods, has been explained. (91-93ab)

The gods he commands by name and by their causal terms (*karaṇasaṁjñā*) will come into existence in the world of bondage (*bhava*). They will come into being in the South of India (*dakṣiṇa*). (93cd-94ab)

Of one kind with three natures, five, seven and nine letters and the End of the Sixteen which is the culmination of the transmission (*krama*) has come into the Krama liturgy. The Krama liturgy is said to be the Couple, along with the eighteen divisions (of the Divine Current).[57] (94cd-95)

The Fruits of Attainment (continued)

O god, he who attains the Piercing Path (*vedhamārga*) in the Kula scripture is not burnt by fire and is not cut by weapons. O god, he does not die (of drowning) in water and is not harmed by anybody. He constantly enjoys many kinds of enjoyments, including those of men, gods and demons. He possesses a divine form, great beauty and knows the three times. (96-98ab)

In truth he is said to be pierced to the extent the stainless god shows (him) the Māyā of all the world, full of (its own) creation. (98cd-99ab)

The Contemplation of Energy

Having contemplated Energy (*śakti*) in the form of a lotus whose light is like a hundred million suns and (contemplated) tens of billions of moons, billions of lightning bolts, countless fires and multitudes of violent winds, he should enter (that) Energy in a moment. He should pierce the entire universe by the power of divine Energy. (99cd-101)

Of all (types of) contemplation (*dhyāna*), that of Energy is the most important. O god, he who knows (reality) in this way is the Lord, the Lord of Kaula. (102)

He is the Self of all the worlds. He himself is the eternal plane. He indeed is Brahmā, Śakra, the Sun and the Moon. He is Fire, Yama, Dharma and the Wind. Omnipresent, the liberated soul is like the Gander (the Supreme Soul) himself. (104)

He is venerated (by the fettered) for (their) salvation and so descends (into the world) during the Age of Strife. This most excellent of adepts is as you are and I am. (105)

He is able to understand completely the essence of the essence of transmigratory existence. O Śambhu, he who knows this is said to be in his last life. (106)

He who knows the piercing procees (*vedhakrama*), O Lord of the gods, is a (true) teacher. O Bhairava, by the grace of (his) Command and the splitting apart of Energy (*kulabheda*), he instigates the piercing which lays hold of the fettered soul and immediately brings about realisation (*pratyaya*). The Initiation by Piercing Devoid of Outer Means

Śrīnātha said:

Such knowledge of the act of piercing inspires great wonder. O Lord, tell (me) about the instrument (of realisation) (*karaṇa*), namely, the piercing of the fettered. (109cd-110ab)

The venerable (goddess) Vakrā said:

Listen, O Lord, I will tell (you) the supreme (teaching), more essential than the (very) essence. (110cd)

The heart is (at a distance of) thirty-six fingers from the Foundation. The throat is twelve fingers (from the heart).[58] (111ab)

Having placed the fettered soul, who is enveloped in the utterance of Energy and in dynamic union (with it) (*lolībhūta*), in front of himself and, having laid hold (of him), (the teacher) should lead him to his own abode (*pura*). (111cd-112ab)

Having brought him to rest by means of exhalation (*recaka*), he should (then) be penetrated by suspending the breath (*kumbhaka*). Latent traces of past action (*saṁskāra*) are purified within the pure, undifferentiated (*niṣkala*), tranquil and flawless transcendent (reality) by means of tranquil inhalation (*pūraka*). (112cd-113)

Having first extracted it by means of exhalation, he should throw it into the jar (of breath retention) (*kumbhaka*) and abide (therein immobile and vacuous) like a jar (while) the ball of nectar (*amṛtagolaka*) is generated (within it). (114)

The Energy whose form is the Tree (*vidruma*) (of the Transmental), who bestows all the goals of accomplishment (*siddhi*), should be conjoined within every single principle in her 'crooked' aspect (as Kuṇḍalinī).[59] (115)

The Śāmbhava Piercing

Śrīnātha said:

O Lord, the Initiation by Piercing devoid of (outer) means has been explained. O mistress of the gods, tell (me about) the Śāmbhava one by means of which there is no further rebirth. (116)

The venerable (goddess) Vakrā said:

The question (you) have asked (concerns a) secret. O Bhairava, listen to the clear (reply). Listen to the supreme knowledge that is visible to the senses and is present everywhere. You should always keep it hidden as one does the seed of the Yoginīs. (117-118ab)

(There is a) place made of the Beak of the Crow,[60] which is devoid of upper and lower. It is a (Wheel of) sixteen spokes that possesses great lustre and is located in the middle of the Circle of the Palate. There that certain (subtle Energy) called `she who desires everything', sports. (118cd-119)

If a (subtle) tactile sensation (*sparśa*) occurs within that place, (the teacher) then pierces (all) fettered souls and (each one) attains the supreme abode. (Thus) he should recall the omnipresent Śiva. (120)

This, the (act of) Piercing, has been explained to you in the *Śrīmata*, the best of Matas. The deities residing in the leader (of all the Wheels), namely, the Khecarīcakra (the Wheel of the Skyfarers),[61] which is the great Wheel of the Sixty-four (Yoginīs), are pleased with one who knows it correctly. (121-122ab)

The Guhakas who live in the sky, on the earth and the lower regions, (the Yoginīs called) Antyajā (Last Born), Sahajā (Innately Born) and Kulajā (Born of Kula) are pleased (with him) at every step. Certainly, O beloved, they view (this) adept, the son of a Yoginī, (lovingly) with their long, playful, swan-like eyes that shine like twinkling stars and whose form is like charming lotus leaves. (122cd-124)

Well attentive, wherever he may be, he gets (whatever he wants) by (this) practice. Without (needing) to reflect, he accomplishes (both) chastisment (*nigraha*) and grace (*anugraha*). (125)

The Practice of the Moving Wheel (*calacakra*)

One should fix one's mark in the Six Wheels in accord with the division of the Moving Wheel (*calacakra*).[62] The (adept) of contented intellect should again set (them) in motion and then having again penetrated (into them) set (them) in motion once more. (126)

By setting (them) in motion and penetrating (them thus), he then pierces (all) fettered souls. By means of Yoga, he should pierce the body (of the letters) (*piṇḍa*)[63] that has been encapsulated in the belly of the body. (127)

By means of the body (of the letters) he should pierce the body (of the universe). He should conquer the body (of the universe) by means of the body (of the letters). (Thus) one's own (inner) Self and the external Self are brought together in one place. (128)

O knower of reality, the Self should be purified by the Self through the power of grace (*śaktipāta*). O Bhairava, because of your devotion (for me) I have told you this, O god. (129)

Conclusion – The Evils at the End of the Age of Strife

At the end of the Age, when barbarian rule is established, there will be those who belong to none of the castes, speak incorrectly and have no lineage (*kula*).[64] (130)

Men (will be) young and pale. (They will be) short lived and have little consciousness. Devoid of right conduct, (they) go to places where one should not go. (131)

Extremely greedy and attached (to material things), they lay waste (the world). There will be no desire to listen to a teacher nor will they want to listen (to even their own) mother and father. (132)

(But at the same time), at the end of the Age of Strife, there will be adepts who belong to Kaula (lineages). They will be members of (all) the four castes and, in particular, Brahmins. (133)

The best (will be), well versed in the Veda (but) there will also be others who belong to the lowest caste. Those of the lowest caste and the twice born eat the sacrificial pap together in one place. (134)

This is the (thirty-first) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description of *the Initiation by Piercing*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Subsequent Six Thousand (verses) of the Pure Division (*vimalabhedottaraṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-TWO

The Characteristic Signs of Teachers and Disciples.

The Arising of the Years (*abdodaya*)

The venerable (goddess) Vakrā said:

O Lord, I will now explain the great arising from the centre of Meru by knowing which alone, the descent (of deity into the world) takes place. (1)

This is said to be the Arising of the Years (*abdodaya*) which begins with Sumanta and ends with Dakṣa. (They) change (one after another) like a (rotating) wheel. The arising (of the years) commences with Sumanta. When it ends with Dakṣa, it (again) starts in (the year) Sumanta. (10cd-12)

(All the members of the series) should be known in the course of (their) arising and falling away (in this way) within (the four Ages) beginning with Kṛta and the rest. Dakṣa (lasts for) for a hundred centuries after the passing of ten thousand (years). (13)

Thus the arising (of the tradition) when (only) Dakṣa's part remains, that is, the eighth (lunar day) of Śiva in Śiva's month consecrated by Siddhanātha, occurs in the West. (14)

The arising of the years (*abdodaya*) in this way is said to be that of the gods (*daivika*). The best of teachers who knows this possesses authority in the Kula tradition.[1] (15)

True and False Teachers and Disciples

Śrīnātha said:

(The true teacher) frees the fettered from sins in this and the next world. How, (then), should one test the teacher (to see if) he is one who has completely understood (*pāraga*) the science of piercing (the psychic centres)? (16)

There are many teachers who wander on this, the surface of the earth. Tell (me) the characteristic of a true teacher. I wish to hear (it) as it truly is. (17)

O mistress of the gods, tell (me) correctly the characteristic of (true) disciples also. Tell me clearly about the practice of the Rule and *Nirvāṇa* in accord with the prescribed method of initiation. (18-19ab)

The False Teacher

The venerable (goddess) Vakrā said:

O great Śambhu, wisely indeed have you asked me about (this) most extensive (matter). Now listen, I will explain everything in due order by virtue of which the Great Pervasion yogis (experience) occurs everywhere. (19cd-20)

O god, those teachers who earn a living by being teachers on the surface of the earth wear Māyā's (deluding) form. (21)

They have fallen from (their) Kula, they have no mercy and are always intent on what is despicable. They are attached to meat and wine and are fickle and deceitful. (22)

They are ever devoted to slander and vile actions. They are proud, dishonest and cruel. They impart ignorance (born of) false empowerment (*mithyājñājñana*). They are quarellsome, garrulous and always speak badly of others. They are attached to (their) greed, full of delusion and are always ready to deceive (others). (23-24)

They collect the teachings of others (but do not practice anything) and their behaviour is false. Those who have these (defective) qualities are teachers (only) in name. (25)

(Caring nothing about purity and pollution, they profess to be) always intent on oneness in the food they eat. These (teachers) should not be venerated in the world. They desire the substances (offered) to a teacher and (deceitfully) eat the (sacrificial) substances (offered) to the Yoginīs. (26)

They are fierce and violent, particularly (those who call themselves) Kāpālikas and they crave for (the wine and meat that are) the (sacrificial) substances of Heroes. (27)

They are false teachers who (profess to be engaged) in penance (although) devoted to eating what should not be eaten and drinking what should not be drunk. (Such teachers) should be streneously avoided. (28)

He who disobeys the teacher's Command never leaves the hell (he is condemed to enter). The disciples they initiate will not possess auspicious good fortune (*kalyāṇa*). (29)

They give initiation out of greed and crave for the objects of delusion. Devoid of the initiation by piercing (*vedhadīkṣā*), they are lustful and have sex with the wives of (those who taught them) the Krama. (30)

O god, devoid of the rite of adoration (*pūjā*), they fall into the ocean of hell. Wood gets one across a river; a stone does not get one across stone. Similarly, a teacher devoid of (good) qualities does not save one from the ocean of phenomenal existence. He should be strenously avoided and excluded from the Teaching (*mata*). (31-32)

The True Teacher

O lotus faced one, listen to (the qualities of true) teachers belonging to the four castes. (The teacher can be a) Brahmin, Kṣatriya, Veśya or Śudra who drinks wine. (33)

I have explained the (true) sign of the teachers belonging to the four castes. They possess the awakened consciousness of an intensely powerful Command and enlighten as to the meaning of the *Śrīmata*. (34)

They are endowed with both knowledge and understanding and carry out the teacher's Command. They are pure and thought-free, selfless and detached. (35)

They are not troubled, but are always blissful, without stain and without (obscuring) ideation, they are merciful, compassionate, truthful and have conquered the senses. (36)

They are all intent on non-violence and have compassion towards all living beings. Their mind is tranquil, their behaviour correct, they have abandoned duality and firmly maintain their vows. (37)

They are not greedy for women or cruel and are averse to vile actions. They are satisfied with divine knowledge, dignified and (their) intellect is tranquil. (38)

They are always devoted to the loving affection of (their spiritual) clan and are indifferent to kingly riches. They are fit (to be worshipped) on the teacher's day and intent on (his) Command. They are very powerful. (39)

They are yogis and speak in a pleasing way. They are benefactors, enjoyers (of the best things of life) and ask nothing of others. They do not find fault with the Vedānta, (Śaiva) Siddhānta or other (schools of the Tantras whether) of the Left (*vāma*) or the Right (*dakṣiṇa*). They are true devotees of the scriptures and the virgins (*kumārī*). (40-41ab)

(The true teacher is one who) sees the land of yogis, Yoginīs and Heroes. Not vulgar, he is compassionate and knows the three times. Steadfast, he both blesses and curses. He is well versed in the initiation by piercing, both when (the disciple is present) visible (before him) and when (he is) out of reach of the senses. He is devoted to the practice of austerity, tranquil, desires little, is disciplined, always intent on divine bliss, he is always pure and saintly. (41cd-43)

His greatness is in conformity with Kula and Kaula and he has mastered the Western Tradition. He does not feel disgust, knows everything and is indifferent to the gift of a benefactor. (44)

He knows how to maintain the practice of the Rule (*samayācāra*) and is well versed in the (teaching handed down through) the lineage. He knows the conventions and is learned (but) never sports any (external) sign (of his attainments). (45)

He is given to the path of the wise and rejects the false one. He is dedicated to (his) worldly duty, eats at the correct time and is detached. He is devoted to ritual and, tranquil, is solitary (although) he lives in a town. He is a learned versed and respected man who has mastered all the scriptures. (46-47)

He is always joyful, a renounciate and liked by all. He is an expert in the rites of initiation and installation (of idols) (*pratiṣṭhā*) and grasps every single meaning (of the scripture). (48)

He is a renounciate and knows how to follow Dharma. He attends to (the auspicious and inauspicious) times and is not violent. He is set on the Heroes' Path (but) avoids drinking parties. (49)

His wife is learned (*bhaṭṭabhārya*), he is pure and rejects the path of the fettered. (He) is beyond mind and his state is one of (spiritual) inebriation. He is free of (lower) Tantric practice (*tantrācāra*). (50)

He wears a white cloth (or) is naked and has dishevelled hair. Handsome, he wears (the yogi's) earrings (*darśanin*), speaks well and is unconcerned with (the ostentatious performance) of many vows. He dresses as he likes,[2] is very clean and desires sound understanding (*matilampaka*). (52-53ab)

One should avoid (and maintain) a great distance from the teacher who is attached to attachment and aversion or who behaves badly and lives far away (in inauspicious places) (*pratyantavāsin*). (53cd-54ab)

One who is born in a country of wise people and can both grace (good disciples) and chastise (the wicked) – such is the teacher in this tradition who bestows (all that) is auspicious. Once attained a teacher like this, who is not liberated from bondage? (54cd-55)

The True Disciple

The mark of a (true) teacher has been explained. Now listen to that of the disciples. Disciples who have not been tested are not fit for the Western Tradition. (56)

(The true disciple is one who is) a good devotee, well behaved, reveres (his) mother and father, is always intent on virtue, tranquil, a renounciate and practices (spiritual disciplines) constantly. (57)

He is intent on worshipping the teacher's feet, the gods, fire and the teacher (himself). He is frightened of the fear (inherent in) transmigratory existence and desires the path of liberation. (58)

He is not malicious. (He is) wise, tranquil and has no interest in (dry) logic. He is always devoted to the Yoginīs and venerates virgins. He does not get angry, does not backbite and has been well and streneously tested. He distinguishes profound matters (from the trivial). He is not a cheat, (but) always speaks the truth. (59-60)

He offers (his) body and the very essence of (his) life to the teacher. Triply pure by (his) action, speech and mind, he is a dear child of devotion. (61)

He is free of deceit and envy and is indifferent to the wives of others. He craves for the knowledge of liberation. This disciple is the very light of Kula. (62)

He does not quarrel, is not disliked and is always respectful towards elders. He knows how to keep the practice of the Rule and worships by means of the occasional (rites of the) Krama (as well as by the regular ones). He is always intent on worshipping the gods and is intent on the loving affection of (his spiritual) clan. (63-64ab)

The disciple who has such qualities and has been variously tested, deserves initiation by means of the most intense Command (transmitted through the teacher's) gaze. Otherwise, if (the teacher) initiates a neophant who has opposite aims (to the correct ones), (then both) that teacher and student will go to the Raurava hell. (64cd-66ab)

Brahmins, Kṣatrīyas, Śūdras or members of other low castes should all be made disciples. One should not hesitate to do so. One should not take into consideration the caste of those who, in this world, are detached and whose feelings (*bhāva*) and devotion (*bhāvabhakti*) are pure. (Instead of inquiring into their caste) one should test their devotion. (66cd-68ab)

A Brahmin who is not a devotee is considered to be an outcaste (*caṇḍāla*). If an outcaste possesses devotion, he is considered to be a Brahmin. What is the use of caste distinctions? Here, (in this case), devotion alone is the prime factor. (68cd-69)

Even a scholar who lacks discrimination in the world is no better than a fool. And even a fool who has discrimination and is intent on devotion, is perfectly pure. He should be known to be well awake. He is fit (to belong to) a Kaula Family. (70-71ab)

Do not confer Kaula status to one who is a bad recipient of it, is vile, a fool, devoid of devotion, keeps bad company, is a cheat and is hard to bear. (71cd-72ab)

Otherwise, if (a teacher), deluded by greed for wealth, does confer (it on one such as this), the Yoginīs will be angry with him and eat the fat and the meat (of his body). And so one must make every effort not to confer initiation (motivated) by greed. (72cd-73)

This is the (thirty-second) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description concerning *the Characteristics of Teachers and Disciples*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-THREE

Concerning the Initiation with Seed

The venerable (goddess) Vakrā said:

(Now) I will explain the Kula initiation of a well-tested disciple.[1] Initiation is said to be of two kinds according to whether it bestows worldly benefits (*bhogadā*) or Yoga (*yogadā*). The one that bestows Yoga[2] does so invisibly, while the one which bestows worldly benefits, does so visibly. O Bhairava, I will explain both of these out of devotion (to you). (1-2)

The Initiation that bestows the Yoga of the Command

The Heart moves within the Self due to the force (*vega* of Energy) as does a flame of a fire. (Kuṇḍalinī) moves quickly (up) to the cavity of the palate and then the sound of a powerful explosion (*sphoṭaśabda*) occurs. (3)

When that fickle (*cañcala*) mind is pierced, it becomes immobile (and) Raudrī is perceived (like the motionless flame of a) lamp by completing the movement of the Gander. (4)

Thus one perceives Energy, which (thereby) moves upwards; a vision of reality arises and one (obtains) the third eye (of inner vision). (5)

Then one attains *Nirvāṇa* and clearly sees the form of the (Supreme) Drop and (so) if (the mind) becomes motionless, one attains the plane of nonduality. (6)

(Then one) abandons the duality of the Knot of Time and (everything) is merged together on the supreme plane (of existence). (One's) aim becomes firm and, (freed of) insentience, one lays hold of the Wheel of the Mothers. Past, present and future each do good (to such a one). (7-8ab)

In deep contemplation (*samādhi*) he sees a fast falling waterfall, the contraction of the psychic channels and entry into fire. (8cd-9ab)

(He) converses with ghosts (*vetāla*) and he hears (them) blessing him. He perceives sacred knowledge and divine beauty manifests (everywhere). Such are your eighty-four states enumerated completely.[3] (9cd-10)

Just as one is, so are they all. This is the sign taught in the Kulakrama of disciples who are (as close to the teacher as are his) sons and are (veritable) vessels of liberation. (11)

Those disciples who possess none (of these) states and disobey (the teachings of) the transmission (*kramika*) do not achieve liberation even in countless millions of aeons. (12)

Know that they have no seed (that can give rise to the liberated state) and they do not develop anywhere. None of them are initiated and their impurity (*mala*) has not been destroyed. (13)

O Great Lord, an intensely powerful Command (is transmitted) by the grace (*śaktipāta*) of the Command that brings about the piercing (of the inner centres). O god, without the Command (that gives rise to) the states, no sign of attainment (*pratyaya*) arises. Those who are devoid (of any) sign of attainment are said to be fettered souls (*paśu*). (14-15ab)

O lord of the gods, (now I) will explain the invisible (*parokṣa*) piercing[4] and (its corresponding) states. Even those who have been initiated and purified the Six Paths (*ṣaḍadhvakṛtasaṁskāra*),[5] but are devoid of the state (of attainment) are said to be fettered souls according to the teaching of the Siddhas (*siddhaśāsana*). (15cd-16)

The states (of attainment) of those who have been pierced by the invisible piercing (*parokṣavedha*) develop in strength.[6] Then the destruction of impurity (*malakṣaya*) takes place. This is the Supreme Goddess's Command. (Thus) the initiation of the Command that bestows Yoga (that can be performed) even at a great distance (*yojanāśata*)[7] has been explained. (17-18ab)

Varieties of the Initiation by Piercing

The Initiation by means of the Principles (*tattvadīkṣā*) (that takes place) on the Six Paths, consists of the Principles, mantra and the parts (of mantra) along with the letters and worlds and (involves the use of) coloured powders (*rajas*), a fire pit and *maṇḍala*. (18cd-19ab)

The initiation that takes place in this, the family (*santāna*) of the Śrīkula, is of two kinds, according to whether it is Tāntrika or Kaulika. (The former involves) sacrificial offerings to the fire (*hotrī*) and (the latter) is one that takes place by piercing (*vedhavatī*). The one requiring offerings to the fire is everywhere said to be for those who are engaged in the repetition of mantra. (The second type is) the initiation by piercing which bestows Yoga. It is heralded by the Command and is very hard to acquire. (In the course of this type of initiation) the cage of the body shakes by meditating on the teacher's sandals. (19cd-21)

Now I will explain the method enjoined for the initiation by piercing. One should make use of the (various forms of) piercing in the course of initiation in the case of a disciple who is at the human (*mānava*) (level).[8] The Flower and the Consecration of the Conch, the Sign of the Balance (*tulāpratyaya*), Paralysis (*stobhana*) and Protection (*pālana*) – initiation is said to be of five kinds. (22-23)

The Consecration of the Flower

The Consecration of the Flower takes place by the power of the energy of mantra when, having filled the folded hands with flowers, (the neophant) lifts them up by himself to (his own) head. (24)

The Consecration of the Conch

The Consecration of the Conch takes place when (the neophant) gradually lifts a conch bowl held in (his) hand, along with flowers and unbroken rice, to the head. (25)

The Sign of the Balance

The disciple who has been purified by the Scale should be initiated after that. The decrease in (his) weight that results from the elimination of Karma is said to be the Sign of the Balance (*tulāpratyaya*).[9] (26)

(The teacher) should first draw a six petal lotus with a circle of thunderbolts (v*ajramaṇḍala*) outside (around) it. He should place the disciple in the middle of it along with the sacrificial substances (offered) to the Yoginīs. (27)

Having worshipped the host of Yoginīs with scent, incense, garlands and the rest, then, by (the power of the teacher's) gaze (the disciple experiences) pervasion (*vyāpti*) and shaking in all the limbs of (his) body. (28)

Pierced (by that divine power) he falls down unconscious. (This is certain), one need not reflect here (about this). One should understand this, the prescribed method of initiation transmitted through the succession (of teachers), in this way. (29)

Three kinds of Initiation by Piercing

Again, initiation is said to be of three kinds, namely, Individual (*āṇava*), Empowered (*śākta*) and Śāmbhava.[10] The one that takes place in a visible way is called Individual. The Empowered one is of five kinds. The initiation in which the Six Paths have been purified is said to be Śāmbhava. (30-31ab)

The Individual (*āṇava*) Initiation

The Individual (initiation) is manifest when the fetters are paralysed by means of a mantra, whatever it may be. It is (both) within time and beyond it. The Individual (initiation) is of four kinds, namely, by seeing, by touching, verbal and mental.[11] (31cd-33ab)

Piercing by Touch

(The initiation a teacher imparts) by touching (his disciple) with (his) staff (*daṇḍa*), quilt (*kanthā*), cloth (*paṭa*), (drinking) vessel or the like or else by touching a limb (of his body directly) is said to be piercing by touch. (33cd-34ab)

Mental Piercing

O handsome one! O beloved child of devotion! The triple purification (takes place) even if the Command traverses a distance of five hundred leagues. The power of one (initiated this way) is (his) teacher's Command that, out of compassion (for the disciple), is deity. This same attainment of (spiritual) qualities is called Mental Piercing.[12] (34cd-36ab)

O Śambhu, Mental Piercing (is the first). The Piercing by Touch is the second. The Piercing by Sight is the third, while the Arduous (*durga*) Piercing is the fourth.[13] In this way, the fourfold Initiation of Knowledge is well established. (36cd-37)

Initiation by Sight

If one initiates a disciple of the lowest caste, this is called Piercing by Sight. Such is said to be the great initiation that gives immediate realisation. (38)

The Empowered (*śākta*) Initiation

In accord with the prescribed method for the Initiation of Knowledge, the disciple who has received the teacher's Command should bring all the offerings for initiation close to the teacher. (These include) fragrant unbroken rice, flowers, incense, a lamp, the sacrificial pap, food and drink, clothes and the like along with gold, elephants, horses and other vehicles as well as offerings of the sacrificial substances. (39-41ab)

Having done that and offered everything completely before the teacher, (the neophant) should worship devoutly the troupe of Yoginīs and virgin girls[14] with divine ornaments, bangles, gold, clothes and the rest. (41cd-42)

Dressing (them with these things), as far as he can, on all the days sacred to the teacher, he should then offer his own body to the venerable teacher. (43)

Or else, (the neophant) who seeks refuge from (his) aflictions (*kleśaparāyaṇa*) (but) has no (great) wealth, should, after he has made a full prostration before the teacher, offer (him) all he possesses. (44)

The Arduous Initiation by the Gaze

O beloved child of devotion, once the teacher has known and tested (the disciple, irrespective of whether) he is rich or poor, (the teacher) should gaze upon him out of compassion. And so, by resting (his) gaze (upon him, the disciple receives) the triple purification and, pierced, he falls (to the ground) in a moment.[15] Rapidly, (the teacher) should utter the essence of knowledge which should (otherwise) not be spoken. The Five Signs of Attainment of the Empowered Initiation

The disciple who has been pierced by the (Supreme) Principle (experiences) the fivefold state. This is joy (*ānanda*), an upward movement (*udbhava*), a tremor (*kampa*), sleep (*nidrā*) and vibration (*ghūrṇi*) as the fifth.[16] (47)

(The initiate acquires the power to) quit the ground (*bhumityāga*), agitate (and sexually arose) the citadel (of any woman's body) (*purakṣobha*). (He has the power to) pierce by making a gesture,[17] which is of many kinds, and (possesses) the knowledge of how to hear from a great distance. (He) starts (to speak spontaneously in) Kaula language (*kaulabhāṣāpravartana*).[18] (Divine) madness (is induced) by every mantra. Song, laughter, dance, rolling around and the like come about spontaneously.[19] (48-49)

The Śāmbhava Initiation

All the aforementioned yogic powers (*guṇa*) certainly come about (within the disciple). By his resting a thousand and when merged in that, one hundred thousand times. In that very (condition) beyond merger (*layātīta*),[20] he attains the supreme place, free of old age and death, by the power of the intense (form of the) Command. (50-51)

O master of Yoga, such is the threefold method of initiation, namely, the human one, (the initiation) by recollection and the third by the gaze (of the teacher). Such is the initiation which is of many kinds and gives rise to the five states.[21] (52-53ab)

Initiation by Means of the Six Paths

The venerable (god) Bhairava said:

Today my birth has born fruit for you have given me a (great) gift. I have understood the initiation by Yoga that gives immediate realisation. By your grace I have come to know the (form of initiation) devoid of the Six Paths. (53cd-54)

Even so, O goddess, (the question) I am (now) asking (you concerns) the form of initiation by means of the Six Paths which is a part of the tradition concerning (the ultimate) Principle that has come down (through the line of teachers). Tell me (this) as it truly is.[22] (55)

The venerable (goddess) Vakrā said:

Listen, O lord, I will tell (you) truly and well all that you have asked about, O god, leader of the sages. The initiation that has been purified through the Six Paths bestows Yoga by virtue of the extension of the Principles (of existence). It is a part of the Kula tradition. Today I will tell you about it. (56-57)

The Construction of the Pavilion for the *Śrīyāga*

First of all (the teacher) who is well versed in architecture (*vāstuvidyā*) should examine the ground. He should dig (to a depth of) seven hand spans and then fill (the hole he has) dug. The ground which gives all that one desires is one where the soil is greater (than the hole). (58-59ab)

It should be cleaned with effort and made free of thorns and chaff, embers, hair and the like. It should (then) be sprinkled repeatedly with water (mixed) with wine, clarified butter, milk, buttermilk, the skins of five trees, the three myrobalans, the sap of a citron tree, and khadira wood. (59cd-61)

(Then), in the north-east quarter, one should fashion a *maṇḍala* that fulfils all desires as explained in the Root *Sūtra* in accord with the previous procedure (*krama*).[23] (62)

One should cause the auspicious *maṇḍala* to be fashioned on the eighth (lunar) day, on the fourteenth (*bhūtākhyā*),[24] the full moon, the seventh, the tenth, the ninth, the third or the twelth (day) in either the dark or the bright (lunar) fortnight. (It may be done) in the summer, spring, winter or autumn. Great heroes (should be present) who possess devotion and whose vows are pure along with those who have passed the test as prescribed in the scripture. (63-65)

The Selection of the Disciples

A *śūdra* should be tested for twelve years, a *veśya* for nine, a *kṣatriya* for six and a brahmin for half that (time). (The teacher) should test (them) by (engaging them in) work that is contrary (to the one appropriate to their caste status in the manner) I am (about to) explain. The lowest (should do) the highest work and a (member of) the highest (caste should be made to do) the lowest work. (66-67)

They should be streneously tested in many such ways. Those who have passed the test and are well fit and instructed should be given, as is appropriate, the grace of the fruit (of their efforts). (68-69ab)

One should carefully avoid those who (behave in a manner) contrary (to their caste norms) (*viloma*). They do not possess the tradition. Those who are not born into the Yoginīkula do not get initiation into the teaching. If one initiates bad disciples out of greed or delusion, both (the teacher and the taught) are certainly very soon afflicted with troubles. (69cd-71ab)

The *Śrīyāga*

Then, once the very wise teacher and great reciter of mantra, has know (his disciples) in this way and is present (there), he should order that the sacrificial substances and (other) requisites for the rite (be brought). He should do this without a thought. Then a virgin girl[25] should be worshipped. The lord of the gods, along with the guardians of the quarters and the doors, should be worshipped there in the pavilion of the great Śrīyāga (the Venerable Sacrifice). (71cd-73)

A group of eight jars, covered with mangoe leaves and bedecked with garlands (should be placed and worshipped) in the primary and secondry directions with the Kula jar in the north-east.[26] (74)

There, one should worship the lord of the gods, that is, Navātman Ānandabhairava.[27] He is associated with the jar of the weapon (*astravardhani*)[28] and is properly worshipped with garlands of flowers. (75)

O god, one should cause the construction of a fire pit purified in accord with the prescribed procedure. (It should be) dug only (to a depth of) a single handspan. (Its shape should be) triangular and (it should have) three (round encompassing) girdles (*mekhala*). (76)

O lord of the gods, once one has done this, one should commence the sacrifice. The well attentive (priest) should first cause the rite of adoration (*pūjā*) to be performed within the *maṇḍala*. (77)

He should worship the Lord who is the God of the gods, Navātman of great lustre and the goddess Parā, the One-syllable (Vidyā), should be next to him.[29] (78)

Her body is large and she holds a lotus. Her form is tranquil and she bestows boons. She drinks divine wine and, inebriated, she laughs.[30] (79)

She should be worshipped, in the manner explained (previously) outside (the *maṇḍala*) in the midst of the Mothers.[31] Two kinds of food offering should be made (to them, one) with wine (*surā*) and (the other) with liquor (*āsava*).[32] (80)

Having worshipped the Krama with devotion, one should perform the rite of adoration in this way.[33] (One should offer), in the manner previously indicated to you, the divine requisites of worship. (81)

Once worshipped the Lord of the gods in this way, one should address the Supreme Lord (thus): "O Lord, in this pavilion of the Venerable Sacrifice (*śrīyāga*), (the Lord) makes one free of defects (*acchidra*). O god, in the same way by your grace, (may the sacrifice) bestow complete success (*saṁsiddhi*)."[34]
(82-83ab)

Having approached close to the fire, one should perform, without (unnecessary) reflection, (all the) rites (of the life cycle) beginning with impregnation and ending with (the funerary rite that conjoins with) Śiva, in due order. (83cd-84c)

Then after having made twenty-five offerings to the fire perform the rite of adoration as before. One should offer libation to (the deity) residing in the *maṇḍala* with the Thirty-two syllable Vidyā.[35] (84d-85)

O fair hipped one, (one should also offer libation to the deity) in the sacrificial area (*sthaṇḍila*) and, in particular, to the one in the Self. One should always perform the rite of adoration according to the prescribed method, in a solitary place and correctly.[36] (86)

Entry into the Pavilion

Having offered animal sacrifice[37] to the god Vaṭuka, the guardians of the field and the rest and the Yoginī and made food offerings to the Krama in the Sacred Seat of Knowledge (*vidyāpīṭha*)[38] and determined (in his mind his purpose),[39] (the teacher) should cause the well disciplined disciple to enter with flowers in his hand. Then he should cause him to release the flowers (from his hands) to the west of the god. Having prostrated before the Great God, he should go near the the fire pit and, having mentally meditated on the Six Paths, he should introduce them into the body. (87-89)

O (observer of) good vows, libation (is offered to the deity of the letters) from A to KṢa in order to invoke the presence (of the deity) (*sannidhānārtha*). The reciter of mantra should always eat the sacrificial pap with milk (as he would) nectar. (90)

O god, (he should offer) red lentils and barley, along with dark blue Kandala flowers, the Priyaṅgu creeper, wheat and rice, both cultivated and wild, in an unbroken and beautiful vessel without hair or dust, made of gold, silver or earth. (91-92)

Once purified with the Weapon, it should be set alight with the Root Vidyā. Laying hold of a firebrand in Śiva's fire, one should light up (everything) inside and outside. (93)

Libations and Food Offerings

The man of contented intellect who has performed (the rites) of protection should place it there in the fire once the caldron has been flooded with milk, clarified butter and the like. (The vessel) should be placed in the middle of the fire in such a way that it does not move. It is stirred (*cālana*) (inwardly) with the Root mantra, namely, the Vidyā of Thirty-two Syllables.[40] One should fashion a white and black cover with the Root Vidyā. The wise should constantly sprinkle (*prokṣaṇa*) and stir it (*cālana*) (it). (94-96)

Once the Vessel of the Siddhas has been prepared, (the contents) should be divided into ten parts. The first (part) should be given to the sacrificial area. The second (is offered) in the northern quarter,[41] the third is (for the south-east which is) fire's (quarter) and the fourth belongs to the Self. (97-98ab)

A food offering is made to the three places and then (the remaining parts are) offered outside as *bali* to the protectors, the Mothers and the protectors of the fields and ghosts (*bhūta*).[42] After having offered the libations, (the officiant) should rinse (his) mouth. (99)

The Stick for the Teeth

Then, having prostrated before the god and praised him briefly, one should offer, along with milk, a stick to brush the teeth without knots. (100)

O god, the Aśvattha and all else that has been mentioned along with flowers and the rest should be offered once the mantras have been intoned. (In this way the rite) gives the fruits of all (one's) desire. (101-102)

(The disciple throws the stick. The teacher) should observe (where) it falls (to see) whether (the direction in which it falls) is auspicious or otherwise. The most excellent is in (the west), Varuṇa's direction. In front of one's self it is (also) excellent. The north should be known to be auspicious and it is also excellent (if it falls) in the north-east. O Great God, in the other directions it is otherwise. (103-104)

The well attentive teacher should careful observe (all this). If (the direction is) auspicious, he attains success; if inauspicious, he should make a fire offering. (105)

******* (?) along with his companions ****** he should give (an effigy of) the 'little man of sleep' (*svapnamānavaka*) to those disciples.[43] (106)

Prognostication of the Disciple's Dreams

Having first performed the morning rite (*sandhyopasana*) and gone (to the sacrificial area) at dawn when the sky is clear, saluted the gods and ancestors, and come close to the teacher, the disciple should tell (him his) dream, whether it is auspicious or not. If auspicious, he attains success, if inauspicious, he should make a fire offering.

When this has been done there is success and the impediments are stilled. O dear one, once one has fashioned crushed *govalakas* (?) in the abode of the most excellent splendour (*śrīvara*) (?) one should, with effort, make a fire offering with thron-apple leaves, bilva and the rest. (107-110ab)

The Drawing of the Maṇḍala

Having first taken a barbed arrow, knife and (a thread) made of cotton, one should take a piece of pure, white chalk and draw it towards oneself. (110cd-111ab)

The thread is in Brahmā's abode One should place it in the eastern direction. O god, the placing of the thread from the southern direction is especially important. Accomplish that in the northern part with effort by the conjunction (of the threads).[44] (111cd-112)

Then having made four parts in the thread in the east, two fish are formed from the fourth part. (113)

One should form the eight quarters by (first) measuring out the (direction) from east to west. It should be the same in the south and north. After that one should form the corners. (114)

(Finally), (one should form the intermediate quarters) in due order (beginning with) the south-east and south-west up to the north-west in the end. Once the field has been formed in this way, one should make a square (around it). (115)

The Drawing of the Lotus

Then, when the square field has been made, one should fashion a lotus. One should draw an excellent lotus twenty-four fingers in breadth. (116)

(The lotus has) eight petals that should (all be) made the same (size). It is brilliant with (its) calyx and stamens. The calyx is the part (of the lotus) in the first (section), the stamens in the second, the conjunctions of the petals in the third, and the tips of the petals in the fourth. A line that wards off (evil influences) should be placed outside (around) the lotus. (117-118)

A leaf should be made outside (the lotus), measuring four fingers. Outside (all of) these, one should fashion an enclosure (*vīthī*) measuring just one handspan. (119)

The door (on each side of the square) is said to be the same size as the lotus or it may be half (the size). Having first marked it out with the thread in this way, one should then spread (coloured) powders (along the lines). (120)

(The lines) are said to be red, yellow, white and black. (Each) line should be straight, unbroken and beautiful. (121)

The junction between the lines should be made the size of a grain of wheat. The calyx should be yellow and the lake,[45] red. (122)

One should make the stamens red, yellow and white. The petals (should be) white and adorned in every way. (123)

In brief, O handsome one, the adept intent on (following) the prescribed method (should do all this). O Great God, he who is engaged in this (work) is not reborn gain. (124)

He wanders in the world of transmigratory existence until he attains the (Supreme) Principle (of existence). When the mind is solely intent on God, he is neither bound nor (needs to be) freed. (125)

Initiation by Means of the Letters

I will now briefly tell (you about) the Path of the Letters.[46] Listen to that. (126ab)

The wise man should worship the god Bhairava, who brings about universal destruction, as he is in the Wheel of Space (*vyomacakra*) on the plane of his own Emptiness (*svakhapādatala*).[47] (126cd-127ab)

After he has worshipped him with effort with perfumes, flowers, food offerings, fine (varieties of) incense and other auspicious things, he should consecrate the disciple. The knower of reality should thus paralyse (the disciple's fetters) by depositing (the letters) on (his) limbs. (127cd-128)

One should apply the Assembly of Sounds (*śabdarāśi*) (in the reverse order) beginning with the letter KṢa and ending with the letter A. One should know that the letter KṢa is the one that separates (*vigraha*) (the series of letters)[48] on the path of the deposition of the Principles. (129)

The deposition of the letters (*mātṛkā*), encapsulated by the principle of withdrawal (KṢa), has been explained. Once the Principles have been visualized and deposited (in the body), then initiation bestows auspicious (results). (130)

(The teacher) should conjoin the sonic energy of the principles (*tattvamātṛkā*) within the disciple as he does within himself. Then, once the knower of Yoga has paralysed the fetters (of the disciple) by conjoining the energies (*kalāyoga*) (to his body) and caused the disciple to face him, he should pierce him (with the energy of the Command). (131-132ab)

Initiation by Means of the Thirty-six Principles

Śrīnātha said:

(This), the Initiation by the Letters (*varṇadīkṣā*), is the supreme essence (of the teachings) that can free from transmigratory existence. Now I want to hear about the Initiation by the Principles (*tattvadīkṣā*) as it truly is. (132cd-133ab)

The venerable (goddess) Vakrā said:

Listen, O long eyed one, I will tell (you) about the Initiation by the Principles (*tattvadīkṣā*).[49] (133cd)

Earth, water, fire (*tejas*), air and space - O handsome one, one should purify the (reality) consisting of six parts (*ṣaṭprakāra*)[50] with these purified (Elements).[51] (134)

Thus, there are said to be (five) organs of action and five organs of knowledge. One should know that there are (also) five subtle elements (*tanmātra*). Now follows the characterization (of these principles). (135)

Sound, touch, taste, form and smell. (This) is the pentad of the subtle elements. The group of five senses (consists of) the ear, skin, eyes, tongue and nose. (136)

The (names of the) sense organs of knowledge have been stated. Listen to (the next) group of five. Speech, hands and feet, the genitals and the anus as the fifth. O three eyed one, you have been told this, the pentad of action. (137-138ab)

The mind, intellect and ego up to Nature (*prakṛti*), in due order; *sattva*, *rajas* and *tamas* that arise as the qualities of Fundamental (Nature) (*pradhāna*) and the Unmanifest (*avyakta*), said to be the twenty-fifth. (138cd-139)

The twenty-sixth should be known to be the Person (*puruṣa*) who experiences pleasure and pain. He is the Knower of the Field (*kṣtrajña*) bound by the Karma he has accumulated due to Nature.[52] (140)

It is said that (the result of) all action and the latent traces (it leaves behind) must be experienced (*bhogya*). All the seeds of conditioned existence are purified by this knowledge. (141)

(Now I will ennumerate), in due order, all the remaining ones on the Path. (The Principle of) constraint (*niyati*) is said to be above (the previous Principles). Established on the Path, (its function is) to constrain and regulate (the lower principles) (*niyamikā*). (142)

O fair one! Time and number (*kālasaṁkhyā*) are the two (that measure) what (the Person) has done. Reality (*tattva*) is pervaded by energy (*kalā*) and is differentiated (*kalita*) according to (its phenomenal) condition. For that reason (this Principle) is called `*kalā'*. The mind (of the individual) Self is broken apart by passion and is coloured (*rañjita*) by it. (Due to it) he is encompassed by Māyā. (143-144)

(The Principle of limited) Knowledge (*vidyā*) should be know to be that which knows. It knows what is auspicious and inauspicious. He who knows the object of supreme knowledge, attains the pure path. (145)

The one who is governed by fate (*adṛṣṭa*) is subject repeatedly to birth and death. Whether it be (the experience of) liberation or worldly experience (*bhoga*), it is impelled by the Lord. (146)

Sadāśiva is the knower. He liberates fettered beings once (they have) abandoned the plane of the seeds of Māyā and have experienced all (their) worldly experiences. (147)

The Pervasive *(vyāpinī*) energy is subtle and is in accord with Śiva's nature (*śivadharma*). Śiva is said to be omnipresent and abides in a tranquil form.[53] (148)

O god, such is the Path that is to be purified in terms of the number of Principles. These thirty-six planes should be purified by the wise. (149)

O handsome one, (the energy) that experiences the mind of the individual souls is to be purified by means of the nine principles that constitute the sequence of (the Principles) beginning with Prakṛti. (150)

Ātman, Vidyā and Śiva are said to be the Triad of Principles. These are said to be the main ones the teachers should purify.[54] (151)

O three - eyed one, one should purify the Six Paths with these pure (principles). Everything is sanctified by those who possess this (Triad). They should be perceived by means of the rays (of the deity). (152)

The Path of the Forces (*kalādhvan*)

O virtuous one! Now I will tell you about the Path of the Forces (*kalā*). (153ab)

The (one) Principle is pervaded by the forces (*kalā*). The (one) Principle is indeed force. Force is the form of the Great God, the omniscient, Supreme Lord. (153cd-154ab)

The (five) forces (*kalā*) corresponding to Earth and the other (principles) are said to be Nivṛtti (Contentment), Pratiṣṭhā (Establishment), Vidyā (Knowledge), Śānti (Tranquillity) and Śāntyātītā (Beyond Tranquillity) which one should know to be supreme. (154cd-155ab)

The pervasive energy (*vyāpinī*) of the Lord of the gods is subtle, very subtle. Pervasive, its form is the Void and endless; it is present (*āśritā*) in the Lord (*nātha*). (And so), O sinless one, you have been told about the Path of the Energies in brief. (155cd-156)

In this way, one out of these (Paths) should be purified by the high-minded teacher. The Path of Mantra, supreme and inferior, should be purified by means of the Vidyā. (157)

O Great Lord, the Path of the Worlds should be awakened by the one who contemplates (the Supreme) Principle.[55] Starting with the first force (*kalā*)[56] up to Śiva, this procedure is in six parts (*ṣaṭprakāravidhi*). O Great God, it should be applied, in due order, within the letters and the entities (of the Paths) by means of (ritual) action seen in the scripture. (158-159)

The Nature of Impurity, Karma and Māyā

Thus, O god, one out of these (Paths) should be purified with effort. Once the teacher who knows the Path has done this up to the extreme end of transmigratory existence, he should grace fettered souls as he pleases. (This can be done) once he has know (the Path) in its (phases of) emanation and withdrawal in accord with (the disciple's past) action (*karmānurūpataḥ*).[57] (160-161)

He who is subject to transmigratory existence and is governed by virtue (*dharma*) and vice (*adharma*) is said to be a fettered soul.[58] He resides in the cage of the fetters that constitute the bondage of (his) previous (Karma and) Māyā. (162)

O virtuous one, the one beginningless impurity abides in the form of a seed (*bījabhūta*). It grows when it enters the field of Dharma (and Adharma).(163)

The field of Māyā is the impurity (of the fettered soul) that is born along with it (*sahaja*).[59] Just as the seed of an Aśvattha (tree) that has fallen (on the ground) grows with thousands of branches and parts by virtue of its association with the field (in which it grows), in the same way the (individual) soul who resides in Māyā is always considered to be of the (same) nature as Māyā. (164-165)

The Māyā that operates due to some (specific) cause is that of the individual soul (*aṇu*). O Lord of the gods, Māyā does not function in the absence of an instigating cause (*animittā*). (166)

Thus the Pure Path never operates for the worldly man (*bhāvin*). O god, then there is no Śiva. There is only Māyā. (167)

By its very nature (Māyā) is bondage (and when the soul is under its influence) there is no liberation (for him) anywhere.[60] (But) in the Yoga of Liberation (*mokṣayoga*) that (same Māyā) is said to be the power of knowledge (*vidyāśakti*). (Otherwise) if liberation were devoid of (any) means (of attainment) those (fettered souls) could not (be liberated). (168-169ab)

Like a king who, bound in his own defects, (finds himself) in prison (but nonetheless remains a king), he who is the (Supreme) Principle, is not (really) subject to bondage or liberation. (169cd-170ab)

The only support individual souls (*puṁs*) have is the binding impurity that is born (*sahaja*) (along with them). Then (when the time comes) Māyā begins to function, awakened by the chain (of the soul's previous births) (*santāna*). (When the soul) is awakened by Māyā, he is is released into (a particular) Principle (in accord with his Karma). (171)

The field (of his) consciousness, which is associated with the power of limited action (*kalā*), is displayed by (limited) knowledge (*vidyā*) and, coloured by passion, he is linked to the organs (of perception), the intellect and the rest. (172)

Thus, bondage, which is Māyā, auspicious and inauspicious, follows as a consequence. In brief, vice (*adharma*) as an attribute (of the fettered condition) takes its support from that, while (Adharma is derived) from Dharma.[61] (173)

The two fetters are said to be those two (Dharma and Adharma); (the fettered soul) is bound by (all of) them. Once one has known (their true nature), the (individual) Self, Māyā and Śiva are disassociated (from each other). (Now) listen to what happens after the fetters have become loose. (174-175ab)

The Disjunction and Paralysis of the Fetters

A distracted person (*acetana*) who, because of he is careless, has been bitten by a snake, (but has) survived, moves about, trembling in the sacred bathing site (*tīrtha*) (to which his well wishers) send (him to be cured). (175cd-176ab)

The power of mantra is visible. There is nothing to reason about here. (By the power of mantras) rocks shake, (the body is) paralysed, (armies are) checked (in their course), (Kuṇḍalinī) comes and goes (ascending and descending). O handsome one, (these) are their best and most excellent signs of attainment (*pratyaya*). (176cd-177)

Bondage is nothing but the Dharma and Adharma of the (individual) Self. O Supreme Lord, this must be destroyed by (the rite of) initiation. (178)

Whatever deeds (the fettered soul) has done, or is doing at present, they are all destroyed by initiation and when the body drops (at death) he attains Śiva.[62] (179)

When the fetter of Dharma has been destroyed, those (fetters that are) grounded in Adharma (are also destroyed). O Lord of the gods, nothing else keeps him on the Path. (180)

If the Self is freed of (its) fetters, it is left without support. (And so the body) shakes and falls, like a tree whose roots have been cut. Just as a tree that is cut by external blows shakes (and then ultimately) certainly falls to the ground. Such is the case with the Self from which impurity has fallen away.[63] (181-182)

The wise should bring about the disjunction of the fetters (from the fettered soul) by means of initiation. If (this) disjunction has taken place, (the fetters) are certainly paralysed. (183)

It is taught (in the scripture) that whoever is established there (and experiences) the paralysis (of the fetters), (his body) shakes (*kampana*) and falls (*patana*) (to the ground). And (ultimately, he attains) flawless Yoga. (184)

The paralysis of the fetters takes place in this way and one is freed of the bonds of Dharma and the rest. The scripture prescribes that such a one is liberated. (185)

Yogic accomplishment (*siddhi*) is attained by the paralysis of the fetters. (The soul who attains this) is accomplished in religious observance (*saṁvara*). Religious observance is the mind (*citta*); without a doubt it is like liberation (itself). (186)

Therefore, this auspicious liberation clearly bestows both Yoga and worldly enjoyment. O Great Lord, he who knows this is liberated and he frees the fettered. (187)

This is the (thirty-third) chapter called *Concerning the Initiation with Seed*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-FOUR

the Teaching Concerning the Offering to the Fire.

Preamble – The Sacrifice to the Fire for Regular *(nitya)* and Occasional *(naimittika)* Rites

Śrīnātha said:

How is the offering to the fire (*homa*) of the initiated disciple to be performed? How is the accomplishment of the occasional rites of one who is engaged in the regular ones (*nityakarman*)? (1)

The venerable (goddess) Vakrā said:

Neither the ritual offering to the fire nor the the repetition of the Vidyā is meant for those who live off others and whose minds are smitten with attachment.[1] (2)

The fire offering along with the (repetition of the) Vidyā (*vidyāhoma*) is enjoined for those who are devoted to the householder's life[2] and those who worship the gods, the teacher and the fire. This is the condition of householders. (3)

The Construction and Purification of the Fire Altar, Sacrificial Area and the Introduction of the Fire

Thus, one must purify a piece of ground in a isolated, beautiful place where there are no people. Once performed the sacrifice of the site (*vāstuyāga*) and the rest, one should have the pavilion erected. (4)

(One should draw) a triangle in the Wheel which is within the icon on the right.[3] The fire pit is (also) said to be triangular and is dug equal (in size and shape) to that (Wheel) with (all the neccesary) characteristics. (5)

The altar should be made in six parts, round and the shape of the world (*bhuvana*). Above (it), one should fashion the three sacred seats, namely, KĀ (Kāmarūpa), PŪ (Pūrṇagiri) and JĀ (Jālandhara), in due order.[4] (6)

In brief there are 106 fingers (in length) in the beginning (?).[5] This is not enjoined on (common) initiates (*praja*) because (the form of this type of altar) is very large (and complex). Moreover, (they would) not know (how to construct) it. (7)

The triangle which, as an aggregate (of parts), has a (solid) base bestows all the accomplishments. It is (used) in the rite of the fire offering and is (taught) in the tradition so that those who desire liberation may achieve it. (8)

The ritual washing (*prokṣaṇa*) (of the sacrificial area) should be done with (repetitions of the) Weapon of the Command and it should be enveloped (*avaguṇṭhana*) with the Armour (of the goddess's Vidyā).[6] The uprooting (*unmūlana*) (of obstacles should be done) with the Eye and then with the Mahantārī (Vidyā). (The holes in the sacrificial area) are filled with (the mantra) in the Khecarīcakra (the Wheel of the Skyfaring Goddess) and it is levelled with Vāgbhavas (AIṀ). It is sprinkled with (the mantra called) Candragarbha and pounded with Bhairava's will (AIṀ). (9-10)

It is cleaned with (repetitions of the syllable of) Supreme Bliss (AIṀ) and smeared with the seed-syllables of the Vidyā. Ritual washing with invocation (*prokṣaṇāmantrana*)[7] and drying (*śoṣaṇa*) should be done with the five sacred seats (that is, the Five *Praṇavas*). (11)

(Those two along with) ritual washing (*prokṣaṇa*), envelopment (*avaguṇṭhana*), uprooting (*unmūlana*), filling (*prapūraṇa*), levelling (*samīkaraṇa*), sprinkling (*siñcana*), pounding (*kuṭṭana*), cleaning (*saṁmārjana*), smearing (*lepana*), washing (with invocation) (*prokṣaṇa*) and drying (*śoṣaṇa*) - these are the thirteen purifications (*saṁskāra*) (brought about) by the instrument (of mantra) that grants fearlessness. (12-13)

(Even if) the four (divine) forms (*mūrti*) of the fire pit are functional, (if) the fire pit has not been purified here, it does not give success. (14)

One should make the Aghora Weapon[8] the seat there in the middle of the image (*bimba*). One should enounciate (AIṀ) the Triangle, which is the world (*bhuvana*) of the Peak (syllable) with the Weapon of the Scalpel.[9] (15)

The Rites of Passage (*saṁskāra*) of the Fire

Impregnation (*garbhādhāna*)

First, Energy is generated in the form of the syllable Vāgbhava (AIṀ) as the man of contented intellect forms the Supreme Gesture (*parāmudrā*) while exhaling the breath. (17)

O mistress of the gods, once formed the Transmission (*krama*) of Kulavāgīśvarī[11] with *`bhagavati'* in the beginning, the descent (of the Vidyā is completed) at the end of the word *`vicce'*. (18)

Vāgīśī (Vidyā), with her energy (*sakalā*) and body (consisting of the six limbs) beginning with the Heart, is in the Circle of Knowledge (*jñānamaṇḍala*). After the site has been purified, place the *Liṅga*[12] in the middle of it. (19)

Having initially formed one Peak syllable (AIṀ) and then (another) seed-syllable (AIṀ) and (so) having placed Emanation (*sṛṣṭi*) within Emanation, one should recollect the Wheel in the Yoni. (20)

In accord with the previous liturgy (*krama*), Consciousness (*caitanya*) (HSKHPHREṀ) is in the centre of that.[13] Emanation comes from that limb and it follows after it (and serves it) (*anuvartinī*). (21)

After one has worshipped everything (*sakala*) in this way, one should offer (one's) actions to the fire. Once the Self which is radiant energy (and white) like sperm has been visualized in the Circle of Fire,[14] the seed-syllable whose form is radiant energy (*tejas*) functions within its womb. (22-23ab)

He who is called Kālāgnirudra is formed (in this way) within the differentiated (*sakala*) (form) of Bhairava. He arises within the Supreme Principle, which is adorned with Supreme Bliss (AIṀ). Generated by the Womb of the Moon, (this) is the process (*krama*) of impregnation (*garbhādhāna*). (23cd-24)

The Parting of the Hair (*sīmāntonnayana*)

One should make three offerings into the fire and worship with the (seed-syllable of the) Heart. Then he is born (*prasavana*) from the supreme mouth by means of the Peak (syllable) of the Heart. (25)

Having done (this) with three offerings to the fire, one should worship by tying the topknot. The parting of the hair (*sīmantonnayana*), conjoined with the the letter `Ī', is done by means of Energy. Having worshipped the head with offerings to the fire, (the sacrament of) the parting of the hair is (complete). (26-27ab)

Placing the Disciple Before the Teacher (*sanmukhīkaraṇa*)

His placing before (the teacher) (*sanmukhīkaraṇa*) (is done) by making two fire offerings within the four energies (*catuṣkala*). Then worship with the (mantra of the) Armour in the Pentad of Nivṛtti. One should worship with the mantra of the Eye and (a few) brief fire offerings. It is agreed that then, O wide eyed one, (one should hold) a bracelet with hairs (of the head) in the left hand (and offer them) with the Weapon of the Vidyā. (27cd-29c)

The Purification of the Newborn Child

The Thirty-Two Principles

Next (comes) the teaching concerning the principles. Earth, water, fire (*tejas*), air and space (these are the gross elements). Sound, touch, taste, form and smell – (this) is the pentad of the subtle elements. (29d-30)

Speech, hands and feet, the genitals and the anus are the pentad of action. The pentad of the senses (consists of) the ear, skin, eyes, tongue and nose. (31)

The mind, intellect and ego, attachment (*rāga*), (limited) knowledge (*vidyā*), (limited) power (of action) (*kalā*), Māyā, the principle of Kāmeśvarī, Pure Knowledge (*śuddhavidyā*) and (the Principle) called Śiva, the goddess who is the Command and the Supreme State – this is the teaching concerning the thirty-two principles.[15] (32-33ab)

Initially, the Vidyā, conjoined with the Point, is in the Circle of Kālāgnirudra (KṢa).[16] VAṢA, conjoined with RŪṆA and the god of the Sound along with the Point. (This is) the seed-syllable that generates the Great Seed-syllable. (One should repeat) the current of seed-syllables again and again. (33cd-34)

Then the newborn child is purified by means of the Weapon of the Vidyā along with three offerings to the fire. This (purification) has been explained in due order to liberate those who desire liberation. (35)

By this same (rite) one attains purity (*śuddhi*). (In order to do this) one should, omitting the hair and the bracelet,[17] make an offering to the fire sanctified with liquor. (36abc)

The Consecration of the Name

Then comes the consecration of the name. The one called Kucandra(nātha)[18] belongs to the Age of Strife. (He goes) by the name of Ṣaṣṭha(nātha) in the Dvāpara Age, in the third Age the fire bears (the form of) Caryā(nātha) and Mitra is (the name) enjoined in the Kṛta Age.[19] (37)

In this way, you have attained the status of fire along with the four Siddhas by means of their four mantras[20] and three offerings to the fire (for each one). (38)

The First Feeding of Solid Food (*annaprāśana*)

First (one should utter) the four names that serve as the instruments (of mantra) in the four (Ages) (beginning with) *Kṛta*. The arising of the dental (letters) should be purified five times with (the five) gutturals.[21] (39)

O god of the gods, the offering to the fire should be made with three drops. One should make the offering to the fire with the three-lettered mantra of the (first) feeding of solid food (*annaprāśana*). (40)

The Tonsure (*cūḍākarman*)

One should make three offerings to the fire of Vāgbhava in association with the name (of the Siddha). With another three offerings to the fire (the goddess) Vidyujjihvā (Lightning Tongue) is (lauded as) the greatest.[22] Thus the (sacramental) Tonsure (*cūḍākaraṇa*), which is hard to acquire even by the gods, has been explained. (41-42ab)

The Investiture of the Sacred Thread (*upanayana*)

Now I will explain the investiture of the thread of the girdle (*mekhalāsūtrabandhana*).[23] (The girdle is) the group of four, consisting of the Pervasive One (*vyāpakā*) and the rest, Withdrawal conjoined with the Point.[24] Having made the offering to the fire five times with the mantra in order to (invite) the Yoginī to be present (*sannidhāna*), the whole of the sacred thread (*upanayana*) should (then) be purified on the Path in that place (*pura*).
(42cd-44ab)

The vow is sealed (*vratabandha*) in the Wheel of the Heart within the seed-syllable of fire[25] which is the third. Once the teacher has made a fire offering he, the reciter of mantra, should make a fire offering to Ānandabhairava of the Navātman (mantra). O Lord of Yoga, one should purify (it) in order to successfully complete the vow. (44cd-45)

Impregnation and the other (rites) should be performed. When (these) rites of passage (*saṁskāra*) have been completed, one should offer everything to the fire with four and eight (offerings) along with that visualization. (46-47ab)

The Purification of the Fire Pit

The Offering to the Fire with the Five *Praṇavas* and Location in the Directions

The reciter of mantra, adorned with the five-syllable (mantra),[26] is surrounded by the Rudras. By the Command (of Śiva) who is the Skyfarer (*khecara*), the fire is freed from the support (to which it is attached) and (travels) upwards.[27] The venerable (adept) who possesses the Brahmā Vidyā (AIṀ)[28] should make fire offerings with the Brahmā Vidyā. (47cd-48)

Beginning with (AIṀ), the aggregate of energies (*śaktisamūha*)[29] and ending with the Skyfarer[30] (KHPHREṀ), in due order, such is the fire offering in the Vidyākrama[31] along with the rites of passage (*saṁskāra*) as it has come (down through the tradition). (49)

Brahmā, Viṣṇu, Rudra, Īśvara and Sadāśiva - these five are the authors of emanation and should be worshipped with the five-syllable (mantra).[32] (50)

Brahmā is in the southern image (*mūrti*).[33] Viṣṇu is in the north. Rudra is in the western quarter. Īśvara is in the eastern family (*santati*),[34] while Sadāśiva is within the Yoni (in the centre). (Thus) the one aggregate (*piṇḍa*) is fivefold. (51-52ab)

Brahmā's seat is made of dry cow dung, Viṣṇu's (seat) with a ball of sesame seed. Rudra's seat is the scripture. Īśvara's (seat) is above the head,[35] while a seat made of (sacrificial) substances (*dravya*) (is prepared) for Sadāśiva. First of all, (they are placed) on seats of Kuśa grass (*viṣṭara*).[36] (In this way, the sacrificial area) possesses the five (divine) forms (*mūrti*).[37] (52cd-54ab)

The Guardians of the Quarters

The guardians of the quarters are outside (located in the directions) from the east to the north-east. When the fire pit that serves as protection (*rakṣā*) has been purified, they should be worshipped with the Weapon in accord with the prescribed procedure. (54cd-55ab)

The (quarters) should be worshipped in due order, namely, the east, south-east, south, south-west, the west, the north-west, up to the north and north-east.[38] (55cd-56ab)

1) The Thunderbolt, 2) the Weapon of Power, 3) the Staff, 4) the King of Snakes, 5) the Earring, 6) the Flag, 7) the Pestle and the Trident, said to be the eighth. (The seed-syllable of) Māyā (HRĪṀ) and Śrī (ŚRĪṀ) should be placed at the beginning (and then) the word (i.e. the name of the deity) is uttered (next). (56cd-57)

Brahmā is above, Viṣṇu is below and (their) two weapons are the lotus and the wheel. Having worshipped it in this way with effort all impediments are removed.[39] (58)

The Eight Rites of Purification and the Five Faces of the Fire

Burning (*jvalana*), inflaming (*dīpana*), piercing (*vedhana*), causing fear (*trāsana*), which is supreme, purification (*amalīkaraṇa*), satisfying (*apyāyana*), consecration, and placing (the deity) in front of oneself (*sanmukhya*) – the purification (*saṁskāra*) of the fire takes place naturally by means of (these) eight in accord with the previous teaching. Offerings to the fire are made with these (eight rites of purification). (Thus) the group of five faces comes into being. (59-60)

One should deposit (the mantras of the five faces of the fire) along with the group of (sacred seats, namely) Uḍḍiyāna (and the rest) with the previous method, individually, according to the division of the lineages (*uli*). (Thus) the deposition of the tongues (of flame) is fivefold. (61)

The tongues (of flame) are, in due order, Kapālī, Kāpālī, Kākinī, Kumārikā and Kubjikā.[40] One should make fire offerings (to these five who) belong to the sacred seat of Yoga[41] with the three seed-syllables and then one should indicate the eight energies (*kalā*). (by uttering their mantras).[42] (62-63ab)

The Purification of the Self, the Descent of the Vidyā and the Rise of Kuṇḍalinī

A garland of fifty deities (is formed) with the aggregate of the letters ranging from Na to Pha. Having first recalled them with devotion, (one should worship) the five limbs of the Siddhas. First of all, the limbs are (marked with) the Trikaṇṭhakā (Vidyā) as in the previous procedure. (Then) having fashioned everything (*sakala*) by means of the deposition (of mantras), one should indicate the sign of attainment (*pratyaya*) (that manifests when this is done). (Thus) the rite of passage (*saṁskāra*) takes place within the (individual) Self who is related to Nature (*prakṛtyātman*) by following the sequence of the liturgy (*krama*) of the sacrifice.[43] (63cd-65)

It should be done for Uḍanātha by means of the (mantra of) ignition[44] and the other (rites performed) together. One should recollect briefly the Fire, which is above and below in the middle of the Sun (*bhānu*). (66)

It is placed below in the category of emanation with the three sections (*pāda* of the Vidyā).[45] Then it is called the Flame (*jvala*) and is endowed with the group of six winds. (67)

The letter Ra in the middle is in between these two, while the (fire) is inflammed (*dīpana*) within the Point. Having placed the group of six within Energy, it is conjoined to the lower Energy. That is said to be the (act of) piercing (*vedhana*). The (act of) frightening (*trāsana*) consists of the group of Five Sounds (*rāvapañcaka*). (68-69ab)

The Completion of the Purification with the Fire Offering to the Vidyā

One should bring the goddess of the Vidyā down to earth with the mantra of purification (*amalīkaraṇa*). Filling (*āpyāya*) (takes place) by (means of the mantra called) Candragarbha[46] and consecration (takes place) within the Command (AIṀ). One should place it in front of oneself with the Weapon. This should not be (done) in any other order. (69cd-70)

Having thus concluded in every way the most excellent fire offering of the Vidyā (*vidyāhoma*), Uḍanātha in all his parts (*sakala*) and the Wheel of the Fire of Time have been realised (*pratyayaḥ kṛtaḥ*) by means of the eight purifications (*saṁskāra*) beginning with 'burning' (*jvalana*) and the rest.[47] (71-72ab)

This is the purification (*saṁskāra*) based on (ritual) action (that forms a part of) the liturgy of the fire offering. Without knowing (this), there is no fire offering, realisation (*pratyaya*) or freedom. (72cd-73ab)

Know that he who has not purified the fire pit and makes offerings to the fire acts wrongful. He is not ordained for liberation. (73cd-74ab)

The Offerings to the Fire, their Number, Benefits and Timings.

Having elevated the supreme *Kuṇdalinī* of vibration (*spanda*) from the locus of the navel, and having recollected the Peak (syllable of the goddess's) face, light red with the splendour of fire, she who is born along with Sound (*nāda*) should be experienced (in the End of the Twelve) within the Triangle in (the Point which is) the abode of consciousness. (74cd-75)

O Lord, I am that goddess. One attains the penetration (*āveśa*) (of my power by) recollecting (me).[48] O Great Lord of the Vidyā of the Krama, having placed the mind there and, in the same way, in the Self, and having meditated on the mantra and made fire offerings (one should make offerings) with barley and rice (*rājā*)[49] of the tenth part (*daśāṁśa*).[50] (Thus one attains) success (*siddhi*) in accord with one's actions. The rosary of letters (should be) made of crystal (and in the course of repeating the mantra is to be moved through the fingers) forwards and backwards.[51] (76-78ab)

(Now follows), in brief, the teaching (*nirṇaya*) concerning the fire offering of the tenth part. (78cd)

Possession (*āveśa*) (by the goddess) in the body takes place with one measure (*mātrā*) (of the offering). By offering the second measure to the fire one attains the state of complete tranquillity. (79)

(A man becomes) wise (*medhāvin*) with three measures and with four one attains the (supreme) good (*śreyas*). Having made an offering to the fire with five measures, (one attains) good fortune and happiness. (80)

When the fire offering with six measures has been made, the body becomes firm (and free from disease). One gains renown with (the offering) of seven (measures) and with eight the realisation of knowledge. (81)

When the fire offering of nine measures has been made, (the adept attains) mastery over speech. When the fire offering of ten measures has been made, (one acquires) the flawless body of the Vidyā. (82)

When two thousand fire offerings have been made the fettered soul is invisibly pierced (with the piercing that penetrates) through the jar, wood and the rest. (This way the fetters are) paralysed (*stambha*) by means of the root Vidyā. (83)

The explosive radiance of gesture (is experienced) with three (thousand offerings); with four (thousand), (the adept) accomplishes all (magical) feats. (He can) fell a tree (with his magical power), cause houses to explode and more. (84)

With five (thousand offerings, he bursts apart) mountains and even the sea dries up (at his command). With six (thousand), the series of entrances (to the body) are blocked and (his) grey hairs are removed. With seven (thousand), he brings the gods under his control, (a feat that is impossible) in any other way. (If he can do this to the gods) then, what to say of men, young women or (even) the maidens of the Yakṣas. (85-86)

With eight (thousand offerings) he obtains knowledge and bears Brahmā’s form; with nine (thousand) (he attains) Bhairava's nature and when (he has made) ten (thousand) that of Rudra. (He attains mystical) flight (*khegati*) and flies up (when) the last portion (*bhāga*) (is offered). There is no doubt about this. (87-88ab)

In this way, the (fire offering) in ten parts has been prescribed in accord with the types (*vibhāga*) of accomplishments (*siddhi*) (it gives). One should make the most excellent fire offering of the Vidyā by means of Vīrabhadra. * * * * * * * * one should cause this to be done with the Wind (*vāyuvarga*). One should practice (the attainment of) accomplishment in front of the *Liṅga* in accord with the parts of the fire offering. (89-90ab)

The wise man should make the fire offering with (these) measures (*mātrāhoma*)[52] to pacify (adverse influences) during the daily rite on the eighth and fourteenth (of the lunar fortnight) or during (the rite) of initiation. (90cd-91ab)

One should make eight hundred offerings to the fire. Then (those who do so) possess the accomplishments (*siddhi*). In this way, eight hundred (are to be offered) in every way on Śiva's Night (*śivarātri*) and other (such occasions). (91cd-92ab)

One should always worship (in this way) when the rite of offering the sacred thread (*pavitraka*)[53] is performed and on the sacred lunar days (*parvan*).[54] (Thus) one attains success (*siddhi*), the heroic state (*vīratva*) and Rudra's world. (92cd-93ab)

The reciter of mantra gets a hundred times more fruit (from this ritual) than a thousand Vedic sacrifices (*kratuyajña*) or a hundred horse sacrifices. (93cd-94ab)

The reciter of mantra who has made the (daily) obligatory fire offering, gets the fruit of having bathed in the Ganges. When a fire offering is made on the eighth (lunar day), it is the same as doing it in Vārāṇasī. (94cd-95ab)

When the fire offering is performed on the fourteenth (lunar day), the fruit is similar (to that obtained by doing it) in Kedāra. (This), the sacred king (of all) fire offerings, (is equivalent) to the consecration (obtained) in all the sacred bathing sites (*tīrtha*) (put together). (95cd-96ab)

Once all the fire offering has been completed (one attains) mastery over all mantras. By offering the fire sacrifice of accomplishment (*siddhihoma*), (the adept) becomes the destroyer of all the enemies of accomplishment. (96cd-97ab)

The Substances Offered to the Fire

The fire offering of the Vidyā (*vidyāhoma*) is enjoined as the regular (daily) practice (*sadācāra*) for householders.[55] One should make a fire offering, purified with liquor, to the image (*mūrti*) on the southern side of the Krama (*maṇḍala*) with white Arka (flowers),[56] Hayāras[57] (and other) beautiful white flowers. (97cd-98)

In the case of an occasional rite, (the offering is made) with the great (Kaula) substances (*mahādravya*). (Thus one attains) the power to make oneself small at will (*aṇima*) along with the other eight yogic powers (*guṇa*) and whatever has past or will be occurs in the present (and is known to the adept). (99)

Śrīnātha said:

What is the extent (and form) of the sacrificial substance (offered) here (in this case)? (What is) the teaching and the prescribed rite (*vidhāna*)? What is the extent (and nature) of the accessories (*saṁbhāra*) to the fire sacrifice? In what measure (*mātrā*) is it enjoined? (100)

The venerable (goddess) Vakrā said:

Now follows a reflection on the extent (and form) of the sacrificial substances (offered) in the regular rite for those engaged (in this practice) to pacify (adverse forces) and fulfil all one's desires. (101)

(The adept) attains that by combining the white Ark flower with sesame leaf. The fires have fulfilled their function when (this is offered) along with clarified butter and the seed-syllable of fire.[58] It is perfectly complete when (offered) with knowledge of the Self and the right hand. (102)

It is enjoined that a ball of *guggula*[59] resin the size of a monkey's testicle (should be offered to the fire).[60] Once it has been smeared with sesame (oil) and kneeded, it should be offered to the fire (with) one *pala*[61] of clarified butter. (103cd-104ab)

The offerings to the fire confer complete success in all the auspicious (public) works (one may undertake) in (one’s) town. Five fire offerings of cooked rice (*anna*) are made to the sacred seats in the faces of the Vidyā. (104cd-105ab)

(First), one should offer five *pala*s of meat to the fire and then the ball (of *guggula*). According to the size of the measures (*mātrā*) (offered one attains) complete success. The fruit of the regular (*nitya*) fire offering is (indeed) great. (105cd-106ab)

The reciter of mantra should make offerings to the fire with Rudra's energy and (then) wander as he pleases. In this way alone he becomes the guardian of the powers (*siddhi*) to become small at will (*aṇima*) and the rest. (Indeed), he who has made the fire offering in the (right) measures (*mātrāhoma*) becomes a member of the tradition (*anvayin*). (106cd-107)

The Fire Offering for the Occasional Rites

Next the prescribed method of performing the occasional rite is discussed. Having prepared eight hundred and fifty *prastha*s[62] of sesame seed smeared with clarified butter and a ball (*guṭikā*) of *guggula* the size of the fruit of the Ark tree, the expert should offer (all that) to the fire. Such is the measure of the monthly (offering). One should not make an offering to the fire that has no measure (*apramāṇa*). (108-110ab)

One should offer according to the prescribed method, blood, cow's milk, clarified butter and flowers of four colours, one hundred and eight times. (110cd-111ab)

First comes the deposition of the Three Thorns (*trikaṇṭhaka*)[63] in the centre of the fire pit and within oneself. (One should perform) the deposition of the (Samaya) Vidyā in the same way and after that the (*Praṇavas* of) the five Siddhas. (One should) then form, in due order, the six-limbed deposition of Mālinī and (that of the) faces (of the fire) and the tongues (of flame). One should offer the measures (*mātrā*) in the fire pit part by part (each according to their own) separate form. (111cd-113ab)

Uḍḍiyāna is the Great Face, attended by Siddhas and Yoginīs. One should recollect the god in the centre of the fire pit. The face of Jālandhara is in the south. (The face of) Pūrṇagiri is in the north and Kāmarūpa is in front of it. Above that is one (more) seat, the fifth, called Tisra. (113cd-115ab)

These are the five faces of the sacred seats. The tongues within them (will now be explained) in due order. (115cd)

The group of four, consisting of the Pervasive One (*vyāpaka*) and the rest, Withdrawal conjoined with the Point (KṢAṀ).[64] They are conjoined with six letter Ras[65] separately in accord with their previous name. (116)

The Kula goddess, Kubjeśī, should be deposited in the sacred seat in the centre.[66] One should throw an animal offering (*bali*) outside (the sacrificial area) for Vaṭuka (Bhairava) and the Yoginīs.[67] One should worship the rest (*apara*) there, namely, the great Krama of the goddess of the Vidyā. (117-118ab)

Similarly, (one must worship) the four sacred seats along with the faces and limbs (of the goddess), the four deities, the group of eight (Mothers) and the goddess of Kula. (118cd-119ab)

O god, the wise man should ignite the two spoons (*śruk* and *śruva*) with the King of Weapons.[68] O great lord, once they have been ignited (in this way), he should envelope them with the Armour. (119cd-120ab)

Brahmā, Viṣṇu, and Rudra, (installed on seats made of) Darbha (grass) are the three locations. The two spoons should be placed there, in front of oneself with the seed-syllable of the Vidyā. Having filled one of the spoons (the *śruva*) with clarified butter and the goddess of the Vidyā has been worshipped, it should be offered to the fire while making the self-sustained (*nirālambā*) Gesture of the Yoni (*yonimudrā*) and inhaling. All that should be done with the left hand, when performing the ritual offering to the fire. (120cd-122)

Then the man of contented intellect, offers a handful of flowers once he has penetrated into the Vidyā. Having completed (the rite and the mantras) of the faces and limbs, the expert should make the offering to the fire. (123)

Once the four Tongues along with the six-limbs have been completely offered to the fire, one should then offer the first fire offering to the eight Kula goddesses. Once one has made (all) five of the five offerings, then the fire offering is complete. (124-125ab)

Holding a rosary in the left hand, one should offer in the Citadel of Consciousness, with the going and coming,[69] the spiritual (*sāttvika*) offering to the fire that bestows all one (could) desire of the Vidyā. (125cd-126ab)

None should cross over the Meru (of the rosary while repeating the Vidyā).[70] (None) should cross (even) the shade of the Meru. The sesame seeds should be sanctified with clarified butter and inflammed with the seed-syllable of fire. (126cd-127ab)

The number of offering to be made to the fire should be a tenth of the repetitions (of the Vidyā). (If the offering is made) with flowers and sesame seed smeared (with clarified butter), (the offering) grants every accomplishment (*siddhi*). (127cd-128ab)

Apāmārga, Śārdūla, Somarājī, Pippala, Īśvara, Brahmā, Jīmuta and Meghavāhana[71] - these are said to be the eight fuels (for the sacrificial fire). They should be offered to the fire with clarified butter, sesame seed smeared (with clarified butter) and beautiful flowers. O handsome one, (the offerings) are said to be three thousand two hundred, or half of that, for (each of) all the Faces. Shortened to a quarter or (even) a half, (the sacrifice) does not give success (*siddhi*). (128cd-131ab)

O long-eyed one, one should make an extra fire offering for the Vidyā of the Command, the mouths and limbs, the tongues, the goddesses of Kula and then the Lords of the Worlds. Then (one should recite) the Weapon of Aghora. Once a hundred and eight offerings have been made, then come the five fire offerings. (131cd-133ab)

Once (this) has been completed with lentils (*māṣa*), one must make a libation to the fire offering consisting of the sacrificial pap for the faces, six limbs, the tongues and the Kula goddesses. Then the patron (*yajamāna*) and the adept (*sādhaka*) should make the (final) complete offering to the fire (*pūrṇāhuti*). (133cd-134)

Once the teachers have been worshipped, (one receives) the grace (*prasāda*) of every accomplishment (*siddhi*). Money (should be offered to the officiant) according to one's means and one’s own body. Then, by donating the sacrificial fee (*dakṣiṇā*), they (achieve) success (*siddhi*) and the fruit of the sacrifice.[72] Hell (is the result) of cheating about (one's) means. Moreover, (even if the fire offering) is performed, it is (as if) it had not been done. (135-136)

This is the (thirty-fourth) chapter called *the Teaching Concerning the Offering to the Fire*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-FIVE

The Emanation of the Triple Division and its Authority.

The Emanation of the Triangle of the Sacred Seats

Śrīnātha said:

I have heard about the variety of types (*bheda*) on the Tantric Path, which consists of the collection of the (Tantras of) the Right and the Left. (I have heard) about Trika (*trikabheda*) which is in all (the Tantras), including the Yāmalas and the rest of many kinds, the numerous Nityā Tantras, the Āgamas, the Gahvara (Tantras)[1] and the rest. (1-2ab)

Now I wish to hear about the Kula variety, namely, the Trika by knowing which the triple division (*trikabheda*) functions. (2cd-3ab)

The venerable (goddess) Vakrā said:

O Great Śambhu! Congratulations! This time you have questioned me well. So, O handsome one, because of your devotion, I will tell you this. I have not told (this) to anybody, but out of love for you I will tell (you), (just as) the disembodied Lord (Īśa) previously told me. (3cd-5ab)

O god, when the moving and immobile (universe) was a void, there were (none of) the endless number of gods, heavenly musicians (*gandharva*), Yakṣas, Snake (deities) and Rākṣasas, there was no moon or sun, no planets, constellations, hermitages or the Ṛṣis. (5cd-6)

O god, I did not exist and nor did you. The host (of our attendents) did not exist and there were no mountains or forests. In the (one) non-dual, formless, and fearsome ocean of darkness (*tamas*), the Divine Command was impelled out of the Abode of the Supreme Goddess (*parāsthāna*), the Bliss of Stillness (*nirānanda*).[2] I am that Energy who emerged (thus). (I am) Śivā (who is) Śiva's will. (7-8)

This division is that of Śiva and (his) Energy. (In this way) I, the Crooked One (*kuṭilā*), have come into being. This has been emanated (*sṛṣṭa*) created threefold and so its form is the shape of a triangle. (9)

It abides having pervaded all this with (its) lower, upper and middle portion. The goddess is (thus) on the Path of Kula and contemplates the plane of the Unmanifest. (10)

It is because the unmanifest (goddess appears) in manifest form that the emanation (of all things) has been made manifest. (Thus) the unmanifest (*avyaktā*) love between us which is unmanifest Sound (*nāda*) came into being. (11)

Those two are the Lord and the Command. This world has been emitted from them. The entire triple world with all that moves and is immobile is emanated by (the Lord's) will. (12)

Everthing has been created in this way – the (sacred) fields, the sacred seats, primary and secondary, the sun and the moon, the gods and demons, the (celestial) hosts, the snake (gods), the planets, Yakṣas, Siddhas, Gandharvas and men, the mountains and the seas. (13-14ab)

The goddess who assumes three parts emanates the triple world in a moment. O lord of the gods, the three gods, Brahmā, Viṣṇu and Rudra and (so too), the three sacred seats are fashioned collectively (*samasāt*) where the one mistress of the gods resides, through (her) multiple nature. All this moving and immobile universe has been created by her. (14cd-16)

She brings about the emanation and withdrawal (of all things) merely for the pleasure of play. She emanates the triple universe, the most excellent City of the Triangle (*śṛṇgāṭa*). (17)

Three gods have arisen therein, namely, Brahmā, Viṣṇu and Maheśvara. The three sacred seats have been fashioned in the form of a triangle in the centre of which is Kaulinī who possesses authority (which she applies) through blissful means (*sukhopāya*). (18-19ab)

Kāmākhya is in the eastern corner, Pūrṇagiri is in the north, Jālandhara is in the south, while Uḍḍiyāṇa is in the west. The secondary seats, the (sacred) fields and many kinds of sacred meeting places (*saṁdoha*) are (also) located here, in the middle and in the primary and secondary directions. (19cd-21ab)

The Projection of the Sacred Seats into the Wheels (*cakra*) of the Body

Śrīnātha said:

Previously you talked about the external (location of these sacred places). Now, O all-pervasive one, I want to hear about the three sacred seats of the goddess (as they are) collectively (*samasāt*). Please tell me (this). (21cd-22ab)

The venerable (goddess) Vakrā said:

O lord Bhairava, out of the great love (I have for you), I will tell you what has not been told to anybody, namely, the emission (of energy) (*skandana*) within the abode (*pura*) (of the three seats in the body). The Lord (Īśa) has told me that the abode (*pura*) of the three sacred seats is within the body. (22cd-23)

The rulers and the goddesses of the sacred seats are also (within it). The three auspicious seats within the body are divided into upper, lower and middle.[3] (24)

(The goddess) resides (in the body) in the form of a triangle with these three places. Kāmākhya is in the (Wheel called) Self-supported (*svādhiṣṭhāna*). Uḍḍiyāṇa is in (the Wheel of) Unstruck Sound *(anāhata*). One should know that Kuṇḍalinī (*nāsā*)[4] is Pūrṇagiri, while Ujjain[5] is in the Point (in the centre of the triangle). (25-26ab)

The goddesses (who correspond to) the powers of will, action and knowledge as the third, reside in their own places along with their entourage. The power of the will is (located) in Kāmākhya. She who is (the power of) action is in Uḍḍiyāṇa, O lord of the gods, the power of knowledge, which is the third, is in Pūrṇagiri (*pūrṇapīṭha*). This variety (*bheda*) is said (to be formed) in accord with the division of the foundation of the Six Wheels. It possesses the first division of six, namely, Ḍa Ra La Ka Sa Ha and Ya.[6] Those who don't know (this) variety (*bheda*) of these (Yoginīs) are deluded by the darkness of ignorance. (26cd-29)

Śrīnātha said:

O goddess who bestows knowledge and wisdom, a great doubt has arisen (within me) and my heart is troubled, O Bhairavī! Mistress of the God of the gods! Omniscient Supreme Goddess! How has the goddess arisen in the three sacred seats with (her) enclosure[7] (*saprigrahā*)? (How is it that) the six goddesses in the Six Wheels have been, by single and multiple divisions, divided threefold and reside in the (*maṇḍala* with) six aspects? (30-32)

The venerable (goddess) Vakrā said:

The (reply to the) question you have asked, O lord of the gods, is extremely secret. O Śambhu, you should guard (the answer as a great secret). (33abc)

The Mistress (*nāyikā*) has arisen threefold within the sacred seats. Although she is one, she is divided in many ways and is both within and outside. The goddess is in every (sacred) field and in every sacred seat. O god, listen to the characteristic feature and name (of these realities) according to the Command that has come down to you. (33d-35ab)

Oṁkāra – the End of the Twelve

There is one, all-pervasive and subtle energy (*kalā*) of Unstruck Sound that rains down (nectar). Sustained by the State beyond the Fourth (*turīyātīta*), it should be known to be the Island of the Moon. White as the moon, snow and the jasmine flower, (it is as fine) as the hundreth part of the tip of a hair. It oozes (nectar) spontaneously by its very nature and is said (to be) within the syllable OṀ.[8] (35cd-37ab)

Oḍḍiyāṇa – The Half Moon

The measure of Half of Half of Ha[9] is located in the centre of the Half Moon. It is called Oḍḍiyāṇa and it has emerged from it. (37cd-38ab)

The Cavity of the Palate

The (Divine) Command is the Energy that emerges in a pure form by the will (of the Supreme Principle). (Then), by spliting apart the channel of Suṣumṇā, she reaches the cavity of the palate. She fills (everything) all around by (her) conjunction with the Fire of Time (*vāḍavānalayoga*). (38cd-39)

This is his supreme and divine seat (*pīṭha*) which is extremely hard to attain. From its presence (the goddess) has arisen (in the form of) a straight line and faces downwards.[10] (40)

Jālandhara (Anāhata)

Terrible (*karālinī*) and encompassed by a garland of flames, she is all things and attracts (them all) to herself. When she who expands out the Gander (*haṁsa*) (of Unstruck Sound), reaches (the Wheel of) Unstruck Sound (*anāhata*), she is called Jvālāmukhī (Flame Mouth) and (resides) in the sacred seat called Jāla. (41-42ab)

Pūrṇagiri (Maṇipūrṇa)

That (same) energy (*kalā*), as Time, is (the goddess) Kākinī who, in the form of the Gander (of Unstruck Sound), (resides) in *Maṇipūrṇa.* She is deep blue in colour (*mahānīla*) and She is shaped (like) the Full Moon. (42cd-43ab)

Divine and wearing yellow clothes, she is the sleeping serpent (who, coiled, is circular like an) earring (*kuṇḍalī*). She disturbes (*kṣobhayantī*) the entire universe and resides alone in the sacred seat of Pūrṇa. She resides in the centre of the navel of the (Wheel of the City of) Jewels and her form is that of a triangle. (43cd-44)

Kāmarūpa (*ādhāra*)

The Bhairavī of knowledge and wisdom, shaped (like) the bud of a Kadamba tree (*kadambagolaka*), is self-generated (*svayamutpannā*). She is the goddess endowed with (all the vowels) from A onwards and (the series of consonants) from Ka onwards (up to Tha). She is also divided up into (the consonants ranging from) the letter Tha (up to the end of the alphabet). She is the Stone (*śilā*) which is perfect (*siddha*) and pure.[11] (45-46ab)

She is the mother of all the goddesses, gods, demons and men. She is Kāminī who arises in Kāmarūpa and removes impurity. (46cd-47ab)

A Description of the Six Wheels and the Triangle Beyond

The six sacred seats have been explained. (Now), in the same way, listen to (a description of) the Six Wheels. (47cd)

The Foundation (*ādhāra*) is the first Wheel and it has four petals. (The god) there is the Lord of the Thousand Million Siddhas and the deity is Ḍākinī. (48)

The second (Wheel) is the Self-supported (*svādhiṣṭhāna*) and it has six petals. The lord (*nātha*) there is the Lord of the Thousand Million Seals (*mudrā*) and (the goddess) Rākinī unfolds there. (49)

The third (Wheel) has ten petals and (is attained) by resting in (the Wheel called) Full of Jewels (*maṇipūrṇa*). The Lord (there) is the Lord of the Thousand Million Mantras and the mother (*ambā*) is Lākinī. (50)

The fourth (Wheel) has twelve spokes and and is called Unstruck Sound (*anāhata*). The Lord of the Thousand Million Vidyās (resides) there along with (the goddess) Kākinī. (51)

The Fully Purified (*viśuddha*) is the fifth (Wheel). It is beautiful with sixteen spokes. The Lord is the Lord of the Thousand Million Rules (*samaya*) and (the goddess) is Sākinī who is designation (*saṁjñā*). (52)

The sixth (Wheel) is the Command (*ājñā*) by nature and, as such, it is the non-dual plane of Śiva and Śakti. The Lord of the Thousand Million Drops (resides) there (with the goddess) Hākinī who is the Command. (53)

She is called Haṁseśvarī (the Mistress of the Gander) and she brings about emanation and withdrawal. She is one, pervasive and subtle and is propense (*abhimukhī*) to emanation.[12] (54)

Above that is the power of knowledge that has emerged in three parts. (These are) the powers of the will, of action and of knowledge as the third. (55)

The power of the will is on the left, the power of action is on the right, while the power of knowledge, which follows the divine Command, is between the two. (56)

(If) the goddess is in Raudrī's state (*bhāva*),[13] she is then called Rudra's power. O god, in this way, there are three supreme sacred seats. (57)

On the left is (the sacred seat) called Kāmarūpa. Pūrṇagiri is on the right. Oḍḍiyāṇa is between the two and Ujjain[14] is located in the Drop (in the centre of the triangle).[15] (58)

The Nine Powers, the Eleven Rudrāṇīs, the One, Two, Three, Four and Eight Energies

These (three powers) are said to be called Vāmā, Jyeṣṭhā and Raudrī. The (group of) nine powers, namely, (the nine) Mothers, Brahmāṇī and the rest, arises next. (59)

Śrīnātha said:

(There are) the modality of nine powers, the tetrad consisting of Jayā and the rest,[16] the eleven Rudrāṇīs and (the goddesses), Rudrāṇī and Maheśvarī. Why have you referred to (all) this again? You are confusing me very much. O mistress of the God of the gods, O venerable one called Kujā, be gracious (and explain this to me) in due order. How is it that the goddess, although one, exists (*vyavasthitā*) in many different forms (*bheda*)? How is her entourage? Be gracious and tell me. (60-62)

The venerable (goddess) Vakrā said:

I am pleased with you and so (I will tell you the answer to) these excellent questions. (Now I will) tell (you many interesting) and varied things (*vākya*). (63)

O god, listen carefully, I will tell you how (the goddess) is divided. O Supreme Lord, all these divisions are (part) of her. She abides threefold in this way, as 1) Vāmā, 2) Jyeṣṭhā and 3) Raudrī. Again, listen to the manner in which these, her divisions, exist. (64-65)

The Command, which is above 4) the Half Moon, is in the location of 5) the Point. Residing in the Point, she is the (vital) energy (*kalā*) of all living beings and she rains down nectar. (66)

6) Similarly, above (that) her form is that of a star and she is located at the end (of the Point) (*sthitānte*)[17] in the form of (divine) Light. 7) Above that is the teacher's mouth, which is called 'Unborn' (*aja*) and is free of all defects. (67)

At the end of 8) Īśvara is 9) the god Śiva who is eternal and unchanging. From that is born the ninefold cage of the body of Navātman.[18] (68)

In this way, the Supreme Energy has come into being and resides in (these) nine places. O dear one, the tenfold cause is Yoga and (so) the dual division (of Śiva and Śakti) has arisen.[19] (69)

The entire universe is bound three times, both internally and externally. When both of these become passionate, they emerge from the End of the Twelve. (70)

The Eleven Rudrāṇīs

Through each of the sequences (of emanation) she assumes Raudrī's state.[20] 1) (When) she is in the Abode of the Foundation of the Root, she is said to be 2) the one who shakes (*dhunanā*) and 3) takes possession (of her devotee) (*āveśanī*). (71)

Raudrī is said to be 4) the one who causes trembling (*kampani*), while 5) the one who throbs with inebriation (*ghūrmaṇ*ī) is 6) the upward movement (towards higher levels of consciousness) (*udbhavātmikā*). 7) She is the doe (*kuraṇginī*) called the 8) `one who dances on one limb' and 9) `she who weeps'. (72)

These, together with 10) the Lion's Roar (*siṁhaśabdī*) and 11) Pulindī, are said to make eleven. They are within Rudra's portion and have dissolved away in the End of the Twelve.[21] (73)

(Thus) the sequence of the sacred seats has been explained in terms of the three (goddesses) beginning with Vāmā. (74ab)

The venerable (god) Bhairava said:

O goddess, is it because I have little intelligence and you consider me to be a dullard that you are confusing me? O mistress of the gods, why (are you doing this)? I am the omnipresent agent (of all action) and (yet) I am guided (*avadhiṣṭhita*) by your Command. Therefore, out of compassion (for me), O goddess, tell me the knowledge which is the great arising (of enlightenment). (74cd-76ab)

The venerable (goddess) Vakrā said:

Well done, O Great Souled One, you who possess unfailing wisdom! I will explain that knowledge which is certain and destroys (all) error, O beloved, the secret that is Kaulinī, the mystery generated from mantra. I will tell you what has not been told to anyone (before). (76cd-78ab)

The One Division

O god, the Divine Command came forth, initially, in the first Age. That (was the) goddess (who) emerged there in the form of a sprout. At the instance of the Divine Command she performed fearful austerity by which the senses are conquered.[22] (78cd-79)

And so it is that I who have the form of a hunched-backed woman (*kubjikā*) and am crooked and naked (*nagnavāsasā*) and possess three aspects have become old. (80)

The Two Divisions

The union of Śiva and Śakti is said to be Śiva's universal condition (*sarvaśāmbhava*). Energy arises on the left, while Śiva is said to be on the right. (81)

Again, Brahmāṇī is on the left and Raudrī on the right. (This pair) is said (to be present) within all living beings as (the channels) Iḍā and Piṅgalā. (82)

The Moon has arisen from the left (side), while Raudrī is the Sun (which is on the right). O handsome one, the entire universe is divided into two parts, and is threaded warp and woof (by these two aspects).[23] (83)

The Three Divisions

Now, O lord of the universe, listen. (How the one reality) is divided into three types of divisions will be explained. The aggregate of existing things (*bhūtagrāma*),[24] mobile and immobile, is divided into three kinds. (84)

(The energy that) wanders with the gait of Suṣumṇā is known as Vicitrā (Marvellously Diverse). Brahmā, Viṣṇu and Maheśvara are diversified with this triple form. (85)

The goddess is triple as Vāmā, Jyeṣṭhā and Raudrī. She resides within the Blue Lotus[25] (*puṣkara*) and is on the plane of the Great Path. She is called Śivā and is always merged in Śiva.[26] (86-87ab)

O god, another way in which (the goddess) abides in a multiple form (*bhedena*) is as follows. (87cd)

इडा च पिङ्गला चैव शिवा[२९३] चैव[२९४] त्वनामया[२९५] ।

यन्न कस्यचिदाख्यातं तच्च ते कथयाम्यहम् ।

Iḍā, Piṅgalā and Śivā, who is without defect, are born of the (three) qualities, *sattva* and the rest and the three types of energy, namely, will, (knowledge and action correspond to them). (The Lord) is triple in the same way.[27] (88-89ab)

The Four and the Eight

O god, (the time has come) now to mention the excellent fourfold division. O Kuleśvara, the (true) Kaulika should know your beloved (goddess) who is divided into four (aspects) in conformity with the division of the cavities (*suṣira*) and the rest. (89ab-90)

She is said to be fourfold and eightfold by way of the right and the left path. Jayā is the goddess on the left (*vāmā*). Similarly, Vijayā is on the right. Again, because of these divisions, these (goddesses) are eightfold.[28] (91-92ab)

The Four, Five, Six and Triple Aspects of the Divine Current of the Eighteenfold Transmission

The tradition (*āmnyāya*) of the Transmission of the Eighteen has emerged as the Command of the Transmental. Endowed with four aspects, (there are) five and six (divisions) and it is threefold.[29] This is what I call the arising of the Eighteenfold Transmission. O god, in accord with the division of the Sun and Moon associated with the right and the left (currents of the breath), (along with) the arising and falling away (of each of the two), (the division is) fourfold, O handsome one. (93-94)

The Five States

Again, by the application of emanation and by the (consequent progressive) arising of the Five Brahmās,[30] the Kulajā (Yoginīs `Born from Kula') who are called Vimalā and the rest (correspond) to five states.[31] In this way, I who am the Yoni of the universe, abide in five modalities. (95-96ab)

The Sixfold Form

O god, listen as I explain the excellent sixfold (form) that follows after. I will tell you what has not been told to anybody. O Lord of the gods, (I) heard it in the past from the mouth of Himavat. (96cd-97)

The Triad

I have arisen sixfold and threefold in the form of a Triangle (*śṛṇgāta*). (O beloved, this) the triad of sacred seats, which has many varieties (*bheda*) has been explained to you. (98)

The Six Goddesses in the Three Seats

One should know that Iḍā, Piṇgalā and Suṣumṇā as the third, are the three sacred seats. They have three goddesses.[32] The goddesses have arisen from them, two at a time in each one. In this way they are arranged in the Six Wheels as the division of the group of six (*ṣaṭkabheda*). (99-100)

(These goddesses), the ornaments of Kula, are said to reside in pairs in the sacred seats. I will tell (you) their names and in which of the sacred seats they reside. (101)

Hākinī and Śākinī have emerged from Uḍḍiyāṇa. Kākinī and Lākinī have come forth from Pūrṇagiri. Rākinī and Ḍākinī emerge from Kāmarūpa. Capable both of gracing and restraining, the goddesses have arisen in this way. (102-103)

The Four Yoginīs

(The Yoginīs) are found in every country and are well known in the teachings of the Siddhas (*siddhaśāsana*). The Kulajā (energies `Born from Kula') and the Sahajā (energies `Born from the Innate') are the forty-nine letters (each one vast and powerful as the) sea. (104)

Sahajā (Born from the Innate), Kulajā (Born from Kula), Khecarī (the Skyfaring Goddess) and Bhūcarī (She Who Moves on the Earth) have many forms and so, O Lord of the gods, they constitute the (goddess's) entourage. (105)

The four (goddesses) beginning with Vāmā (along with)[33] Śivā and the rest make four. There are sixty-four goddesses and thirty-two mothers (*prajātikā*).[34] Those (goddesses) who possess the sixteen digits (of the moon) (*kalā*) and the twelve born from the Sun, the eight goddesses born from the Kulas,[35] the group of four and the triad. O Lord of the gods, all of this has come from the (goddess) Kubjā. (106-108ab)

It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat[36] along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-SIX

The Competence for Knowledge and Wisdom.

Maintaining and Cultivating the Liberated State

Śrīnātha said

O Great Goddess, by your grace, I have understood all this. Now I want to hear about the Command of Ritual Observance (*anuṣṭhājñā*) that bestows both liberation and worldly enjoyment and is, O goddess, the plane of knowledge and wisdom. I want to hear about the unmanifest *Nirvāṇa* that is both supreme (transcendent) and inferior (immanent). (1-2)

The venerable (goddess) said:

Well done, well done, O greatly wise one, you who can convey (the fettered) across the ocean of transmigratory existence! I will tell (you) without a doubt, what the Command of *Nirvāṇa* is.[1] (3)

I will tell (you) about the Principle that is both supreme (transcendent) and inferior (immanent). Listen, O lotus faced one, to what has come down from the teacher's mouth by the path of the Practice of the Rule (*samayācāra*). (4)

The Reality (*tattva*) that is perpetually active (*nityodita*) and unbroken (has been) transmitted by word of mouth.[2] It is the Great Bliss, eternally manifest, unconditioned and continuous. (5)

O god, just the subtle hint (*uddeśa*) on the teacher's lips (that conveys the entire purport of the) scripture gives the adepts who crave accomplishment (*siddhi*), every joy (*sarvānanda*). (6)

For one whose habit it is to attend constantly to spiritual discipline (*anuṣṭhāna*), you are always one and the same. Such also is your mind (*citta*), contemplated (*cetita*) within the individual soul by the consciousness (*caitanya*) that is the essential nature of the object of thought. (7)

आधारयेत् तु[४६] शान्तात्मा स्वशरीरे परापरम् ॥ १७ ॥
उन्मनान्तं[४७] तु यैः[४८] प्राप्तं[४९] सिद्धास्ते शाक्तशाम्भवाः ।

(Such a one) is always master of himself (*ātmavat*), he is full of the Command. Always blissful, independent and free of worries, he moves in Kula within indeterminate reality (*niṣkala*). (He does not need to) sleep. (For such a one) there is no hunger, no thirst. (8)

(In that state) there is no mind or discoursive consciousness (*saṁjñā*) and he is detached. There is no exertion or sexual passion (*rati*), nor is there heat or cold. He knows nothing of pleasure and pain or anything else (of the play of opposites). (9-10ab)

He always laughs, sings, and plays musical instruments and the like. He runs or rolls around (on the ground) freely as he desires. (10cd-11ab)

These kind of things just happen spontaneously (in higher states of consciousness) and (so the adept) should not be afraid, but should play freely as he wishes.[3] Such is Supreme Bliss and the Transmental (Energy) (*unmanā*) that is perpetually active (*sadoditā*). (11cd-12)

O god, (this) state, which is hard to attain, has been explained to you. O Bhairava, those who ridicule it are fettered souls who have been deprived of divine knowledge. (13)

Those who ridicule the path of Yoga do not attain (ultimate) reality (*tattva*). (They are) like the fool who follows the path of the treatises (on external matters) (*śāstra*) or the virgin (who does not know) the (sexual) pleasure of a mature woman. (14)

The Vedic path is said to be one thing and Āgama is known to be another. The Kaula path is one thing and ultimate reality, another. Therefore one should, in this way, abandon error and practice thought-free (consciousness) (*nirvikalpa*). (15-16ab)

One is oneself the teacher, oneself, the disciple, oneself Energy and oneself, Śiva. One is oneself gross, oneself, subtle and oneself alone both supreme (transcendent) and inferior (immanent). (16cd-17ab)

The tranquil soul should sustain within his own body both the supreme (transcendence) and the inferior (immanence). Those who have reached the end of the Transmental are fully accomplished (*siddha*) (both as) Śāktas and as Śaivites (*śāmbhava*). (17cd-18ab)

Serving and Worshipping the Teachers

In the world all (the teachers) are worshipped in the *maṇḍala*, (including) Vṛkṣanātha[4] and the teachers who belong to the Transmission of the Teachers and Siddhas (*gurusiddhakrama*) in the tradition (*śāsana*). (18cd-19ab)

One should not leave the *maṇḍala* empty (without offerings) if one wishes (to preserve) yogic power (*siddhi*) within oneself.[5] If the deluded soul (leaves) the teacher's *maṇḍala* empty, how then can he have the Command or Kaula realisation (*pratyaya*)? (19cd-20)

Those who are dishonest, full of Māyā and speak badly of the Yoginīs go to a terrible hell and (remain there) bound in (its) great belly. And those who go to that most terrible place from where it is impossible to escape, (remain there) for fourteen cosmic cycles (*kalpa*). (21-22ab)

He whose intellect is lucid, (but) who has no money should, once he has offered (himself) body (and soul) with great devotion, serve the teacher like a slave. (22cd-23ab)

The Supreme Yoga – The Rise of Kuṇḍalinī and the Six Wheels[6a]

The Supreme Energy emerges from Being and is established in the centre of the body. (Now) listen (as I tell you about what happens to) this supremely subtle (energy), in the form of the Command, once the body has been abandoned. (23cd-24ab)

One should always contemplate (the Supreme) Principle. (This contemplation) is the great arising of the Yoginīs. Kubjikā is the Supreme Goddess who bestows immediate realisation. (24cd-25ab)

One should salute the supreme goddess Bhairavī, whose nature is to fill (all things), she who bestows the accomplishment of the Command and (abides perpetually) with Bhairava. (I salute her), the mistress of Yoga, (who is) the mother of the Siddhas, Khecarī (the Skyfaring Goddess) and Bhūcarī (Who Moves on the Earth). (25cd-26)

Once one has saluted (Kubikā), the Crooked One (*kuṭilā*), contemplated and bowed to the (teacher's) sandals in the head, one should commence the supreme Yoga. (27)

The Wheel of the Foundation

There is a Wheel of Fire in the middle of the Wheel of the Foundation between the Sun, Moon and Fire. In the centre (of that is Kuṇḍalinī) whose form is (like) the pure flame of a lamp.[6b] (28)

The yogi who practices the contemplation (of that flame) quickly attains success (*siddhi*). Generated from the fire of consciousness, (he should visualize it as being) like a circle of lightning flashes, brilliant as a thousand million suns and radiant as heated gold. The universe is filled with its rays right up to the world of Brahmā. (29-30)

Once the expert has made (his) mind firm and placed it in the middle of that (flame), he should contemplate the Yoga which is immensely astonishing and hard to acquire, even by the gods. (31)

He quickly attains the success (*siddhi*) he desires by (the power of his) will (alone). He (experiences) possession (*āveśa*) of which the signs of attainment (*pratyaya*) are trembling (*kampa*), paralysis (*stobha*) and the rest. (32)

(He experiences) giddiness, trembling and paralysis and (a state of) the great inebriation (*mahāghūrṇi*) arises.[7] (The yogi) is constantly in a possessed state and (he enjoys) union (*melaka*) with the Yoginīs. (33)

(He knows) the past and future. (He can) enter into another body. (He can) make statues move, (cause) explosions and paralyse an army. He can go to other great countries (without moving) and up to the very end of the sea. If the individual soul (*ātman*) has reached (ultimate) reality whatever he does or (even) does not do is, without a doubt, successful. (34-36ab)

This great knowledge is hard to acquire and should not be given to (just) anyone. It should be given to a disciple who is devoted to his teacher and has faith. This knowledge, which is hard to acquire even by the gods, should be given to those who are always devoted to the scriptures of the Kādi (tradition), who are truthful and firm in their vows. The Wheel of the Self-Supported and the Wheel of the City of Gems

O god, I have told you about what is on the plane (*bhūmiga*) of the Root Wheel. (Now) listen, O Lord of the Universe, to another teaching concerning the knowledge (of Yoga). It is in the centre of the Wheel of the Self-supported (*svādhi*), linked to the (reality that) pervades both (polarities). (38cd-39)

Kuṇḍalī, who is the Supreme Power, has merged into (the Wheel of) the City of Gems (*maṇipūra*). She, the sleeping serpent, is the mistress of the gods and her form is that of an earring (*kuṇḍala*). (40)

The goddess Mahāmudrā always awakens those who are asleep. (Thus), placing one's mind there, one should beat (the sleeping serpent) with the stick of the vital breath.[8] (41)

It will certainly shake and (the body will) horripilate repeatedly. By the Yoga of (steadfast) practice (*abhyāsayoga*) and the contemplation (of Kuṇḍalinī) who is brilliant like a ruby, the yogi will certainly attain the state of Flight (*khecaratā*). (42-43ab)

He should contemplate the (supreme) reality (*tattva*) of the immobile Self within (Suṣumṇā) the Thread of Energy, in the form of a Kadamba bud, adorned with billions of Points (of energy). (43cd-44ab)

Once you have lifted it up from the locality of the navel, merge it into the heart. The yogi should (then) drag it out of the heart and place it into the pit of the throat. (44cd-45ab)

Having leaped into the (the Wheel of the) uvula (*lambikā*), he should slowly drink the nectar of knowledge. Above that, is the Upper Sky, the Aperture of Brahmā, where he should rest. O Lord of the gods, (there) he feels a cool tactile sensation (*sparśa*) which is the supreme bestower of Yoga. (45cd-46)

(Then), O Lord of the gods, having returned again, merge it into (the Wheel of the City) Full of Gems (*maṇipūrṇa*). This is the Yoga of the Perception of Touch. It is the teaching concerning the Knot of the Navel. Knotted together with Śiva and (his) Energy, it is the most excellent Yoga. By practicing (this) state (*avasthā*) (of Yoga) in this way, (the yogi) attains Sadāśiva.[9] (47-48)

The Energy in the form of the vital breath (*prāṇa*), which transmigrates because of the division between (its) downward and upward (movement), is said to be the Supreme (Power), hard to attain even by the gods. (49)

Thus, O god, the Yoga that is supremely hard to attain has been explained to you. It should not be taught to those who lack devotion and despise the Rule. (50)

This knowledge is the excellent heart of (true) yogis. It should be given (only) to good disciples who are true devotees, speak the truth, are firm in their vows and, indifferent to wealth, crave for knowledge of reality (*tattva*). He who speaks (about) it in any other circumstance is the greatest of sinners. (51-52)

The Wheel of Unstruck Sound

Śrīnātha said:

I have heard about the essence of reality, namely, the teaching concerning (the Wheel) Full of Gems. Now I wish to hear about the excellent Yoga of the (Wheel of) Unstruck Sound. (53)

The venerable (goddess) Vakrā said:

O Lord (*nātha*), listen carefully to the essence of knowledge which is hard to acquire. The Gander, who is the all-pervasive god, the inner vehicle of the heart, travels in a directly apparent manner (*sākṣāt*) to the Stable Place (*dhruvasthāna*).[10] (54-55a)

The Gander is the Self, the individual soul (*pudgala*) and the stainless (*nirañjana*) Śiva. He is the pervasive sustainer of the body (of all) embodied beings.[11] O Śrīkaṇṭha, what is the use of speaking much? (This reality has) countless millions of names! I will tell (you) its essential nature (*svarūpa*) by virtue of which adepts attain (their goal). (55bcd-56)

Its form is that of a firefly and a lightning flash and its lustre is like that of pure crystal. Located in the middle of the sacred seat of the lotus of the heart, it is the radiant, Supreme Reality, blissful (*modita*) by virtue of the movement of Energy (within it). The Gander, who is the god Sadāśiva, merges (there) into the New Moon (*puṣkara*)[12] and resounds (making the sound) `*haṁsa*, *haṁsa*'. (57-58)

It is destroyed with the Stick of Energy[13] in the form of the inhaled and exhaled breath. It is struck (*āhata*) by Energy (*śakti*) and so is said to be Unstruck Sound (*anāhata*). (59)

Struck by the Stick of Energy, it produces ten kinds of sound. The first sound is `ciṇi'. The second is `ciñciṇi'. The third is a long continous (sound). The fourth is the sound of a conch. The fifth is the sound of a strung instrument. The sixth is the sound of a flute. The seventh is called 'the sound of cymbals'. The eighth is the sound of (thunder) clouds. The ninth is the sound of a (raging) fire and the tenth is the sound of a kettledrum. Abandoning (the first) nine sounds, the tenth bestows liberation. O highly virtuous one, once known that, one quickly attains success (*siddhi*).[14] (60-63)

It should be recited, contemplated and worshipped constantly with pure, mental flowers (offered) with meditation. Then, O god, one quickly attains realisation (*pratyaya*). (64)

Haṁsa: the Pure Principle

Śrīnātha said:

The scriptures are extensive (and so people) are unable to understand (them). O Great Goddess, (the reality) you have discussed called `Haṁsa' is very hard to attain. I have not understood it (fully), (so please) tell me (more) about this Pure (*viśuddha*) Principle.[15] (65-66ab)

The venerable (goddess) Vakrā said:

O Lord, greatly wise one, listen to the teaching concerning the Pure (Principle). (66cd)

One should contemplate the eternal Gander located in the middle of the sacred seat of the lotus of the heart.[16] Its shape is that of the bud of a Kadamba tree and form that of a star (*tārā*). (67)

One should contemplate (Kuṇḍalinī who is pure) radiant energy, (brilliant like) hundreds of millions of suns, by means of the network of its rays. Having immobilized it with (the power of) the mind and the brilliance of the flame (*arcisamujjvala*) has been intensified, (it abides unchanging) like (the flame of) a lamp in a windless place that is fixed and does not does not shake.[17] By practicing this in this way, accomplishment (*siddhi*) is not far away. O god, I have imparted this knowledge to you. It is supremely difficult to acquire, pure and gives immediate success. What else (do want to) ask? (71cd-72ab)

Unstruck Sound is the Nameless (*anāma*). It is Śrīnātha in the form of the Gander. It is the union of Śiva and Śakti that those who desire success (*siddhi*) should know. (72cd-73ab)

Śrīnātha said:

I have heard (the teaching concerning) the essence of reality, namely, the Pure (*viśuddha*) (Principle) which is pure and free of impurities. Again, I want to hear about that other reality that is (even) purer than pure and is both supreme (transcendent) and inferior (immanent). (73cd-74ab)

The venerable (goddess) Vakrā said:

Well done, well done, O Great Śambhu, desiring to benefit (all) Kaulas you are asking about the Supreme Principle, namely, consciousness (*vijñāna*) and the Supreme Nectar (of immortality). Once obtained this knowledge, (the gods) Brahmā and the rest, the demons, and all the Siddhas who are supreme yogis, reached the immortal state. (74cd-76ab)

Merge the supreme, divine and eternal (Principle) into the location (of the Wheel) in the throat. (In this way) one attains eternal Yoga, the excellent transformation into nectar (*amṛtīkaraṇa*). (76cd-77ab)

O god, one should mentally contemplate the Energy who is Rudra and has merged into the End of the Twelve, stable (*sthira*) (there) like the flame of a lamp.[18] (77cd-78ab)

By means of that (flame) the Self (should contemplate) the Self, which is the Lord, in the Wheel of the Heart. O god, (in this way) and in no other, one soon attains (a state of) enlightened consciousness (*saṁvitti*). (78cd-79ab)

O Lord, listen to the supreme variety (of this practice), the most excellent knowledge of reality (*tattva*). (79cd)

The auspicious (*śiva*), the innate (*sahaja*) (reality) consisting of three letters (HAṀSA) is located in the middle of the sacred seat of the lotus of the heart.[19] It is mounted on the Wheel of the Sun and is free of impurities, like pure crystal. It rotates within the wheel in the wheel (of the heart) through each petal, separately, one by one. (80-81ab)

O Three-eyed one, the yogi who practices in this way for six months, quickly achieves success and his (state of) Great Pervasion (*mahāvyāpti*) is unbroken.[20] (81cd-82ab)

Curling back the tongue, (the yogi) should concentrate on the extremity of the uvula (*vahala*). This is how a yogi free of all disease practices.[21] (82cd-83ab)

Having pierced that with the spear of Energy, he should drink the excellent nectar. (In this way) the yogi (acquires) a divine body and is the beloved of the Skyfaring goddesses (Khecarī). Without a doubt (this) lord of yogis quickly acquires whatever he desires, whether it is in heaven or on the surface of the earth in the world of mortals. (83cd-85ab)

O god, I have imparted this knowledge to you which is like nectar. O god, what else (would) you (like to) question (me about)? I will tell (you about that). (85cd-86ab)

The Wheel of the Command

Śrīnātha said:

O mother of the host, by your grace I have heard (the teaching concerning) the Pure Principle. Now I would like to hear about the Principle of the Command that is very hard to attain. (86cd-87ab)

The venerable (goddess) Vakrā said:

O Śambhu, you have clearly enquired about the supreme knowledge that should be know. I will tell (you) about the Principle of the Command, namely, the Great Arising (*mahodaya*) free of doubt. (87cd-88ab)

The (five) Sound, the Point, Energy (*kalā*), Light and Bliss are (collectively) Bhairava.[22] All these are in the Stable Place (*dhrūvasthāna*)[23] and have come (to form a part) of the sequence of the Six Wheels. Merely by recalling them, the cage of the body trembles. (88cd-89)

The yogi who is in the centre should contemplate Raudrī's (energy) in the middle of the capsule of the Sun and Moon between Iḍā and Piṅgalā.[24] (90)

Raudrī, who has arisen from (the phase of) Energy (*kalā*) that has been split in two, is Rudrāṇī in a fierce (*raudra*) form.[25] As (AIṀ) the Scalpel of Knowledge, the Light of Raudrī is a thousand times greater than the brilliance (*tejas*) of fire. (91)

Shining like the Fire of Time, she has emerged out of the Cavity of Form (*rūparandhra*). She utters (and projects upwards) (*uccarantī*) the supreme Sound (*nāda*) out of the (transcendental reality) called the Nameless (*anāma*) and the Unwritable (*alekhya*). (92)

Having risen up from the cavity of the palate, she drinks the supreme nectar (of immortality). Her form the Doomsday Fire (*vāḍavānala*), she causes the Point and the Sound to flow. (93)

She has arisen in the Age of Strife, (her) light intensely inflammed, within the Place of the Command. (She is) the energy in the Wheel called `Tranquil' (*śāntā*) and her garment is pure. (94)

When (she) reaches the plane of the Place of the Command, she completes (her) work as she pleases. By (her) movement, she impells all things, including gods, demons and men, Brahmā, Viṣṇu, Indra and Rudra, along with the mountains, forests and groves. The yogi whose mind is immersed in that should pierce through the Stable Place (*dhruvasthāna*).[26] (95-96)

There, in that place, is a great wheel, beautifully round and possessing thirty-two spokes. It is luminous like a thousand million moons and brilliant like a hundred million suns. Its light is like that of a billion fires and is surrounded by a garland of flames. (97-98ab)

That same goddess resides there, along with Bhairava. (He is) the First Lord (*Ādinātha*) (who) is in the letter Ā,[27] where the goddess is established. Thus (that) great wheel is said to be called the Command (*ājñā*). (98cd-99)

The deities in the great wheel of thirty-two spokes reside in the *Maṇḍala* of the Void (*vyomamaṇḍala*) and belong to the divisions of the Krama. They are: Śrīnātha, Bhairavī, Śāntā (Tranquil), Kālikā (The Black One), Vakrikā (the Crooked One), Bhimā (the Terrible One), Khageśī (the Mistress of the Skyfarers), Citrā (the Varied One), Vicitrā (the Astonishing One), Kuṭilānanā (Crooked Face), Nandā (the Praised One), Bhadrā (the Beneficient), Jayantī (the Victorious), Vijayā (Victory), Aparājitā (Unconquered), Mohanī (She Who Deludes), Kālasaṁkarṣī (She Who Drags Time), Hemā (Gold) Kūṣmāṇḍā (Pumpkin), Carcikā (the Mill Wheel), Taraṅgā (the Wave), Nirmalā (Pure), Caṇḍā (Wrathful), Vidyujjihvā (Lightning Tongue), Bhayāvahā (Frightening), Śavarī, Śāvarī, Śarvarī, Pulindikā, Nityaklinnā (Always Wet) and Suraktā (Passionate).[28] (100-103)

The deities of the Wheel should be recollected both in the (transcendental aspect of) reality without form (*nirākāra*) and the (immanent aspect) with form (*sākāra*). The Command of the infinite (*ananta*) soul who knows them shines radiantly. (104)

The energy Vakrā (the Crooked One) is called Virūpā (the Deformed One) and the Peak (seed-syllable) (*kūṭa*). She is supreme and imperishable. (By her) power, Bhagānanā (Yoni Face), unfolds tranquillity and pours out (of herself) (*ullasantī*). (105)

She who is the Fire of the (Supreme) Principle inflames all things repeatedly. Recall (the goddess) Kulakaulinī in the great Wheel within the Place of the Command. (106)

That very moment she gives rise (to the spiritual power of) fame (*kīrti*) in the Śrīkrama within Varuṇa's House.[29] (One who attains her acquires the power to) quit the ground (and fly) and agitate the body, that is, leave (the corporeal) abode vacant (*utkrānta*). (He knows) the past, future and the present, what comes after and what goes before (*parāpara*) and has the ability (*vijñāna*) to hear at a (great) distance as he pleases. (107-108)

That supreme (knowledge), which is more essential than (even the) essence (of knowledge), has been explained to you before. O Śambhu, it is sixfold as the six Peak (seed-syllables) and it brings about the Great Pervasion.[30] (109)

One should practice this Yoga of the sustainer and the sustained within the division of the six (Wheels). (The adept achieves) liberation in the seventh by abandoning the six (Wheels) by means of the energies of the imperishable letters.[31] (110)

The practice (*ācāra*) of the sequence of mantras and Vidyās has emerged from the furthest extremity (*anta*) of the seven and there in the end of the seventh the (mantras and Vidyās) merge along with the senses of action. (111)

Like the wind in the body, ****** (?). Similarly, energy resides within the body and, in this way, she is also both supreme (transcendent) and inferior (immanent). (112)

She is one (but) has many varieties (*bheda*). Although she is one, she has six faces. She who is Bhairava's bliss is one. Her form is the mind and (yet) she is Mind Beyond Mind (*manonmanā*). The mistress of the gods sports there, in the crowd of the groups (*kula*) of sense objects. (113-114ab)

O Bhairava, as long as one does not hear the *Śrīmata* line by line and does not (experience) the teacher's compassion, there is no success (*siddhi*) in the Kula. Therefore, abandon all else and take refuge in the Wheel of the Command. (114cd-115)

By recollecting it, the yogi is liberated from the world of transmigration, the ocean of suffering. By attending to the sequence of the Six Wheels, the yogi is liberated in an instant (from all sins including) Brahminicide, wine drinking and the terrible (sin) of killing a woman. (116-117ab)

The Yoginīs, in divine or human (*adivya*) bodies, are pleased with him and (those) Born of Kula (Kulajā) and the Innate (Sahajā) (bestow) success on the yogi. (117cd-118ab)

This is the descent of the Command. It should not be given to (just) anybody. But, if it is given (to the wrong person) by mistake, (the teacher) is purified by repeating (the purifying Vidyā) one hundred thousand times. (118cd-119ab)

This is the (thirty-sixth) chapter which is the emergence of the transmission (*kramodaya*) concerning a description of *Competence for Knowledge and Wisdom*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command.

CHAPTER THIRTY-SEVEN

The Practice of the Rule (*samayācāra*)

Śrīnātha said:

O Bhairavī, by your grace (I have) understood, in due order, Kaula initiation, the prescription concerning the fire pit and the offering to the fire as well as the teaching. Now I want to the hear the characteristic features of the Practice of the Rule (*samayācāra*). (1-2ab)

[1]O Lord of the gods, now listen, in due order, to the Practice of the Rule as enjoined by the scripture for (all) disciples. (2cd-3ab)

Previously (in earlier ages) after many lifetimes, initiation used to bring about the destruction of one's own Karma, (bestow) success (*siddhi*) and the highest state (*gati*). (But nowadays) the bonds of Karma are not quickly broken, even those of one who has been initiated.[2] (3cd-4)

He who has not (been an object of) the teacher's compassion[3] does not practice the Rule. (But) the one who keeps the Rule, once he has received the teacher's compassion, is freed from the bonds of Karma. This is the Command of the Supreme Goddess. (5-6ab)

One who sullies the Practice of the Rule, even though he has been purified by initiation, is not freed from the bonds (of Karma) if he does not practice.[4] (6cd-7ab)

He should regularly (*nityam*) make the Circle of Teachers (*gurumaṇḍala*) with scent, incense, unbroken rice and the rest. (Having) first (worshipped) the teacher’s divine nature, he should purify the *maṇḍala*.[5] (7cd-8ab)

O god, first of all, having worshipped the book (of the scriptures) in an isolated place where there are no people,[6] he should listen to the Kula scripture along with its teaching (imparted by the teacher).[7] (8cd-9ab)

Having heard the (deeper) meaning of the sense of the teaching of the scripture, one should worship the teacher like a servant. The disciple who desires liberation should observe the Practice of the Rule.[8] The knower of scripture and so too one who is born of (a spiritual) family (*kulaja*) should perform his religious observance in front of the *Śrīmata*.[9] (9cd-10)

He should prostrate and offer salutations in the presence of the teacher who knows the (Supreme) Principle. In the presence of the teacher he should not laugh loudly or be haughty, nor should he stretch (his) limbs playfully, fool around, chatter frivolously or (assert his own) view.[10] (11-12ab)

In the presence of the teacher, he should not (expel) mucous from (his) nose, make noise by snapping the fingers, distort (his facial expression), wash (his) teeth or sit (casually) as (he) pleases. (12cd-13ab)

If the teacher happens to do something bad that runs contrary to what has been enjoined without telling (anybody), one should not reflect on that. The teacher (does not require advice), he knows (what is best) himself. (13cd-14ab)

If (the disciple) desires success, he should not make (his) seat, bed, parasole, ornaments or vehicle similar (to those) of (his) teacher.[11] (14cd-15ab)

[12]The teacher's seat, diadem (*paṭṭa*), the shawl (he wears when practicing) yoga (*yogapaṭṭa*), (his) sandals, bowl, rosary, loin cloth, clothing, weapon, secret scripture and the sacred offering, should (all) be revered (*pūjya*) with devotion and (every) effort (should be made to) keep them hidden. (15cd-17ab)

Once one has offered the teacher scent, incense, beetle leaf, cooked food, drink and all the rest completely, one should take it (oneself) after having been given the permission (to do so).[13] (17cd-18ab)

Having shown (his) devotion (*bhaktiṁ kṛtvā*) to the teacher in this way, the disciple who possesses unwavering devotion[14] receives the teacher's (gift of) compassion and it is right that (he should get the) consecration (*abhiṣeka*). (18cd-19ab)

The (goddess's) Command is always at work within the disciple by virtue of the Command he has received from (his) teacher. Desiring success (*siddhi*), he wanders constantly (all over) the world, (freely) as he desires. If he is one who has renounced (all things) by virtue of his practice (*caryāvadhūta*), he should wander in (each) sacred seat and field, (one by one) in due order (*kramāt*).[15] (19cd-20)

The lord of yogis who, by virtue of the intensity of the Command (bestowed upon him), desires success, should take a skull (*kharpara*) and related impliments (to eat his) meals and ever (maintaining his state as) a Lord of Yogis should reside permanently in an abandoned temple.[16] (21-22ab)

If the yogi desires success he should always maintain (a sense of) equality between friend and foe, pleasure and pain, what is desireable and what is not, the auspicious and the inauspicious, respect and disrespect, praise and blame, a stone and gold, an (inedible) plant and (tasty) cooked wild rice. (22cd-24ab)

In some places he is a (reputable) scholar, in others a (disreputable) actor, in others again a renounciate – the yogi wanders on the surface of the earth assuming many roles.[17] (24cd-25ab)

(He should have) devotion for the teacher, for the elders and for the Kula scripture. He should worship the Yoginīs and Virgins (*kumārī*) with devotion at all times. (25cd-26ab)

One who desires success should not be greedy, deluded or lazy. He should not disobey (the teacher's) Command, (or be) haughty, (full of) desire (*laulya*) or attached to the objects of sense. (26cd-27ab)

One should not give the mantra, the thread (that connects together) the Rudrākṣa (seeds of a rosary), (the teacher's) sandals, the Circle of Teachers (*gurumaṇḍala),* the (deity's) mirror, the Liṅga, the Gesture, the Kula scripture or the knowledge (imparted by a) Śavarī (*śavarījñāna*) to just anybody. (27cd-28)

One should destroy in every way attachment and aversion, ego, the vice of backbiting, deceit, anger, greed and laziness.[18] (29)

One should never criticize in any way others' practice of the Rule, a virgin, the troupe of Yoginīs, the (sacrificial) substances of the Siddhas or the sacred seats. (30)

One should always praise the actions of the Siddhas and Yoginīs, the Kula scripture of the lineage (of teachers), the secret scripture that has not been seen or heard before and the deity. One should not be violent with the teacher.[19]
(31-32ab)

A Kula yogi should not watch (people) gambling, acts of magic, the slaughter of an animal, (the violent) punishment (*nigraha*) (of another human being), wrestling bouts and cock fights, a beautiful naked woman with exposed breasts, a virgin's vagina or sexual intercourse (*paśukrīḍā*).[20] (32cd-33)

One should not feel abhorrence for a fool, one who has lost a limb due to leprosy, a deaf person, a blind man or the smell of meat, urine or feces. (34)

Trees, bushes, vines, creepers, grass and plants (in general) should neither be uprooted, cut, damaged or harmed.[21] (35)

One should worship the Kula scripture[22] with scent, flowers and other such (things), the sacred substance (*dravya*) of the Yoginīs, or whatever one has acquired without asking for it. (36)

The yogi who is intent on success should, by means of this Yoga of the practice (of the Rule), regularly worship the teacher's sandals with the flowers of recollection. (37)

One who desires success should not censor the deceitfulness (of others), the assembly for disputes, the envy (of others), base sexual intercourse (*paśusaṁgama*) or deities made of stone and wood.[23] (38)

One should not tour the world (just for fun). (One should take) special care to avoid the company of the worldly. Thirdly, (one should avoid) drinking parties. These three sins should be avoided. (39)

One should always attend the meetings of (one's own Kaula) clan (*gotragoṣṭhī*) and in particular that (of one's own) transmission (*kramagoṣṭhī*). The third is the assembly (formed for) the performance of the sacrifice (*yāgagoṣṭhī*). One should observe these three. (40)

The wise man should not eat poison nor should he play with snakes. One who desires success should not do anything foolhardy. (41)

One should not recall to mind the (attractive) gait of a woman, acts of violence or some past event. One should not abandon the things obtained (by chance whether good or bad) and thus one should be a person who has conquered the senses. (42)

The Lord of Yogis should always reside (either) in a Śaiva temple (*prajāpatigṛha*) or in a brothel. Go wherever (your) thoughts (*bhāvanā*) go. (43)

If one desires flawless success, the mind should not be (forcefully) restrained. (Thus) one should always wander on the (face of the) earth along the path of non-duality.[24] (44)

The Lord of Yogis who desires success should wander in the eight (sacred places) of Kula (*kulāṣṭaka*) (to obtain) alms. He should always tell people: "do not touch me! I am (impure) with sin (*sadoṣa*)." (45)

One should not make sounds `re! re!' or `he! he!' (uttered in contempt). (As a sign of respect) one should not utter the word `Gaurī' or say `Kālikā'. One should not say the words `Khañjī' or 'Kumārikā'. One should not say `Śākinī' and never utter `Sehārī'.[25] If one desires success in the teaching, one should not behave in a vulgar way (*grāmadharma*). (46-48ab)

One should not eat the meat of a yew, bitch, peahen, gander, sow, female buffalo, female owl, gazelle, female vulture, she goat, doe, a (female) bird or other female animals.[26] They have sought (my) protection and so I have forbidden it. (48cd-50ab)

One who follows the Rule (*samayin*) should not speak badly of a spiritual son (*putraka*), adept (*sādhaka*) or teacher (*ācārya*). O handsome one, they should always be worshipped. (50cd-51ab)

One should never insult or taunt with the sound HŪṀ a fisherman, a ball-maker (*kanduka)* (?), a liquor distiller (*dhvaja*), a foreigner (*mleccha*), a butcher, a soldier, an ugly person, a deformed person, a cheat, a eunoch, a mad person, someone who is suffering, a wrestling fan (*mallavandin*), a man with excessively large testicles (*kośāḍhya*), a sculptor (*śilpaka*) or a leather worker. One should not cultivate a feeling of enmity or act irresponsibly (*sāhasa*). One should make one's bed under a solitary tree or at a crossroad, in a sacred place (*kṣetrasthāna*) or a cremation ground. One should not induce (others) to do vile things (*kṣūdrakarman*) (in these places).[27] (53cd-54)

One should make one's bed in a solitary place. One should not trouble the body. One should make one's bed in a temple, on the bank of a river or in the ashes of (burnt) cow dung. Sexual intercourse is the supreme state.[28] (55-56ab)

One should not talk (about) one's clan wife (*gotrabhāryā*)[29] especially amongst those of one's own (social) class. O beloved one, one should never cross over or touch with one's feet the leg of a bedstead (*khaṭvāpāda*), a grind-stone (*gharaṭṭa*), a filled jar (*vardhanikā*),[30] a mill stone, a wooden mortar with which corn or grain is threshed (*kaṇḍaṇī*), the cooking stove, a pestle, the threshold, a bow, arrow, a sword or, O beloved, any other weapon.[31] (56cd-58)

O handsome one, one should not eat food at the wrong time or with the left hand. It should not be given with the left hand. It should be given in the right hand. O Bhairava, one should take what others give with the left hand. (59-60ab)

One should not give a medicinal herb or a mantra (to someone unfit to receive them). One should protect the Vidyā (from public knowledge). One should not gossip (uselessly) with others about the Śaiva scripture. (60cd-61ab)

One should never find fault with the Śaiva scriptures and never collect them (as one does profane books). O god, one should exert oneself to listen to the teaching of one's own school (*svadarśanamata*).[32] It bestows both liberation and worldly enjoyment, one should always observe it and ponder on it. (61cd-62)

One should never say anything that should not be said nor do (anything) prohibited. One should prefix the honorific `*śrī*' when referring to any of Rudra's (sacred) places.[33] (Similarly), one should utter `*śrī*' before the teacher's name when greeting him. (63-64ab)

One should not go on pilgrimage to (public) sacred places (*tīrthayātrā*); (instead) one should practice Yoga.[34] One should not speak much, (instead one should always) remember the teacher's words. (64cd-65ab)

Having taken up the unmanifest Liṅga, one should never make it public (*prakaṭa*). O Lord of the gods, (one should not) consume the sacrificial pap in one place with Tāntrikas. (Rather one should do so) with (the adepts) born of a Kula who desire to achieve success and liberation (65cd-66)

One should not criticize others' behaviour even if it is despicable and disgusting. (Even) if one is the Lord of Kula (himself), directly visible, one should not dine with others (who belong to a different tradition) (*ekapātraṁ na kartavyam*). The mantras (of one who does so) become averse (to him) and (he encounters) obstacles at every step. Therefore one must make every effort to avoid dining with others.[35] (67-68)

One should fashion the Circle of Teachers (*gurumaṇḍala*)[36] in front of the scripture and in front of the teacher. One should worship the Śrīkrama, which bestows the fruits of worldly benefits and liberation, on the head.[37] (69)

This is the (thirty-seventh) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description of *the Practice of the Rule* (*samayācāra*). It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `KĀ' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-EIGHT

The Root *Sūtra* which is the Womb (*yoni*) of the Ocean of the Kula Tradition.

Śrīnātha said:

I have not heard about the root of the transmission (*anvaya*). Tell (me about) the root of Kula, the teaching of the Kula tradition (*kulāmnāya*). O Supreme Goddess, Great Lord, tell (me about) the Yoni of Kula (*kulayoni*). (1)

The venerable (goddess) Vakrā said:

The Energy called the Yoni (*bhaga*) has three modalities (*gati*), it is made of three letters and is of three kinds. Located in the centre (of it), along with the Supreme Power (*parakalā*), is the venerable (seat called) Uḍḍiyāṇa that is beautifully luminous (*sudīpta*). In the right corner is the venerable (seat) called Jālandhara whose abode has been made manifest. In the left (corner) is the venerable Pūrṇapīṭha that arouses fear in the fettered and fills the universe.[1] (2)

In front of that is Kāmarūpa. Endowed with the energy of passion, it is the abode of every accomplishment (*siddhi*). The sacred seat Tisra is another one there. Above it, there is another, namely, the sacred seat of the Moon (*candrapīṭha*)[2] which is located on the forehead.[3]
Above that is the Wheel of the Mothers. It has three encompassing rings. (This is) Koṅkaṇa. It is located above the Point. (There are) the six sacred seats and the principles (*tattva*) in the sacred seats. Each of the six, along with (all) the six, are generated in each of the six.[4] (3)

The Siddhas, the goddesses of the Six Wheels, then, after that the group of six trees and the creepers (*vallī*), the six seals (*mudrā*) of the goddesses and Yoni which has the three modalities[5] and is in the corner of the Mothers.

Within the Yoni is the Aggregate of Letters (*varṇarāśi*), the cause of the sixfold process of differentiation (*kalanā*).[6] The six verses and the six are in the middle along with the three.[7] (Thus) the teaching of the single verse is surrounded by the three enclosing boundries (*valaya*). (4)

Her seal (*mudrā*) is in the triple wheel and the Divine Liṅga is Kulīśa whose excellent face is threefold. Within that is the One Verse and the Lord (*nātha*) who is within both Kula and Akula and whose form is the Tamarind Tree (*ciñciṇī*).[8] The three verses have been arranged in front of him, in accord with the prescribed method, along with six verses that are on the right. The others are to the left of that within the abode has been made manifest.[9] (5)

Such is that, the Mother's Liṅga, the Lord of OṀ. consisting of Śiva with parts (*sakala*) and the group of six. One should contemplate the Liṅga of the Void (*vyoman*) within the City of Three Cities, that is, Uḍḍiyāṇa the First Seat.

That is the secret Sacred Seat of the Mothers on the plane of the Triple Path and is the word (*pāda*) of the single letters. Of (all) the Liṅgas in the Wheel of the Mothers within the abode of the parts the Krama (*kramapada*), it is the Liṅga of the Sky, the abode (of all things).[10] (6)

The blissful lord, Mudrānātha, resides in the Void (*koṭara*) of the Doomsday Fire (*saṁvartā*) and is the Lord of the Vowels (*svarīśa*). He is merged within the Left-hand Path of the energy which is the supreme nectar and is divided up by the Six Wheels.[11]

The entire troupe of yogis, adorned with the energy of Supreme Śiva, resides within the Triangle. In the middle of that is the Divine Liṅga[12] that generates supreme bliss and is the Point whose form is the (transcendental) Void (*kha*).[13] (7)

It is eternal bliss and, by churning it from above, it is divided into six aspects.[14] Located on the forehead[15] of the Command (AIṀ), it is (the sacred seat called) Tisra which is the essence of the Innate (*sahaja*) Kula[16] and the fitness (*adhikāra*) (to enjoy) the expanse (*ābhoga*) of the Vidyā.

Klinnānātha (the Lord of the Wet Goddess)[17] is the Kadamba tree, (who) placed within the most excellent Void (*varapuṭa*) Siddha Kauḍāranātha. Kapāda is within the Point. He is Bhairava whose energy is bliss and form (*bimba*) radiant power (*tejas*). (8)

In this way everything is pervaded by the three divisions of Rudra's energy who is the mother of persistence and destruction. The expansion consists of the twenty-seven divisions. The experience is (the seed-syllable) *Vāgbhava* (AIṀ) with five varieties.[18]

The tradition (*āmnāya*), with (its) three divisions, is in the City of the Moon in the middle of the Island (of the Moon) located on the Plane of the Transmission. The goddess of the gods resides there (in the middle).[19] She is Nandadātrī who, free, is (both) Kula and Akula.[20] (9)

The form of the teacher's Command, that has given birth to the six[21] and removes the fear of the fettered, is the Divine Current of the Siddhas (*siddhadivyaugha*).[22] She is Nityaklinnā (Perpetually Wet) by nature[23] and is well known as the energy of supreme bliss that is infused with joy (*mudita*) by the Yoni.[24]

The one Peak (syllable) of the Mother is tawny brown (*piṅgala*).[25] (It is formed) by the six rays of the bliss of the Siddhas.[26] He is Khageśa of the Command (who resides) in the lotus of the City of the Moon. The essential nature (*rūpa*) of (all the) Peak (syllables), he is the form of the aggregate of (all) the seed-syllables.[27] (10)

The (goddess) called Space (*kha*) emits, along with the six divisions, the cosmic vitality (*vīrya*) of the letters and syllables. The one Flower is generated by the churning of the Sun and Moon. It is the Peak (syllable) of the Point located in the field (of the Triangle).[28]

From (that) Flower comes (another) Flower. (They are) Śiva, the supreme teacher and his empowered (*śākta*) Flower. Another Flower originates from (*prabhavati*) (these) two Flowers in the ocean (of ultimate reality), namely, the divine goddess Kumārī. (11)

That other one is the Flower of Arousal (*kṣobha*) which, present within (both) Kula and Akula, arises out of the midst of the Verses. Such are your Five Flowers[29] that, along with the parts (*pada*) of the Krama, are the image (*mūrti*) of Kula.

(These) couple of verses (*yugma*) are the sole (most) authoritative (statement of) the teaching of the Tradition of the Flowers (*puṣpāmnāya*) that has been created by the best of the gods. The two Flowers are the (couple consisting of the) Image (*mūrti*) and the Liṅga[30] that have been made clearly manifest in the transmission (*krama*) and is the main (teaching) of the previous path.[31] (12)

The Fire and Moon (*agnisoma*) face one another by the oneness of the passionate friendship of both Śiva and Śakti. Joy (*āhlāda*) and Kiss (*cumbana*) are the two divine Siddhas who are above that.[32]

The union (*ubhayaparipuṭa*) of Kubjīśa and (the goddess) called Kubjikā is the current of the sequence of mantras and Vidyās. In the Age of Strife the beautiful energy of the Fire of Kula is within the Liṅga[33] and makes both constantly blissful.[34] (13)

Both of these are in the City of the Moon. (They are) the supreme mass of the bliss of (the two Siddhas) Hari and Hara which is in the middle (of the *maṇḍala*). This has arisen by its will as the dawning of the Path of Meru with (the six letters) Ra Ri Ra Ra Ra Ru.

The one goddess of the tradition (*anvaya*) triumphs (*prabhavati*). She is the deity endowed with energy (*sakalā*) called Vakrikā. She has come from Tūṣṇīnātha and fashioned within the mountain Cave, she who is called Fire has been made manifest.[35] (14)

There are two Siddhas within the *maṇḍala*. Both are Śiva and Śakti and are well accomplished as the Seed and the Flower. The fear of fettered existence is quelled under the solitary tree (that is, the seed-syllable) in the middle (where) the two reside silently in the Cave (of the cavity of the Triangle).

Another emanation is generated by these two. Above that there is another lord of the current of the tradition. The sacred seat that has arisen in the beginning is the cremation ground Karavīra[36] that removes the impurity of the Age of Strife. (15)

The Siddhas there are five. After that comes the pure one (*vimala*) and the five goddesses of the Siddhas. This is the arising from the (Command), the root of Ā.[37] It is the emanation of the energy of the Moon of the universe, which is as it should be (*upapannā*).

It is the First Seat, the (feminine) Liṅgā of the (sacred) field (*kṣetra*) (of the Triangle), the burning away of the impurity of the Age of Strife, well known on the path of knowledge. They all reside in the sacred seat. The birth of the Command of the Tradition (*anvaya*) takes place from the sides of the mountain (Meru) that has arisen (*udita*) (in this way).[38] (16)

The fifty divine Rudras,[39] who are present in (both) Kula and Akula, are in Uḍḍiyāṇa, which is in a state of oneness (*ekarasya*). To the south of that (is Pūrṇagiri, the abode of) the Heroes (*vīra*)[40] who are within the network of the grid (*gahara*) of the letters in the Body of the Mothers (*mātṛpiṇḍa*).[41]

Fifty, of unimpeded strength, are on the path of accomplishment in the Tradition, the Path of the Siddhas. Others, namely, the Bhairavas, who are (in the Triangle) on the path of the triple plane (*tripada*), are in (Jālandhara) the corner on the left,[42] and are full of the Liṅgas. (17)

These are the fifty Siddhas who belong to the family (*santāna*) of the tradition (*anvaya*). Saluted with respect by the best of the gods, they are renouned in the lineage (*vaṁśa*) of the Siddhas. They are on the one path of Pūrṇapīṭha and can be understood (only) through experience.

In the same way, in Kāmarūpa, these same (Siddhas) have attained the greatness of the energies (*aṅganā*)[43] of the Liṅga of the Siddhas.[44] They are free and bestow the bliss of joyous glory (*pramuditavibhava*) within the family of the tradition. (18)

First come the fifty Rudras who, emanated (*kalitā*) above that, are renowned on the heroes' path. The Bhairavas are on the left, in the city of the Yoni of plenitude (*bharaṇabhaga*). The ones called Rudras are in Uḍḍiyāṇa.

This is the path of the Siddhas. Emanated (*kalita*) in Śiva's abode, it is the Siddha Path of Kula. Silently (*tūṣṇī*), it has arisen, along with the four Ages, in the root sacred seat named Vakrikā. (19)

This family (*santāna*) is the Clan (*gotra*). Radiant with experience, it is the Divine Current (*divyaugha*) of the god. All this is immersed in silence (*tuṣṇistha*) and, like the Yoni, its energy is active (*uditabhaga*) as the mantra (that flows in) a single current (*ekaughamantra*).

It was explained by Khageśī (the Goddess of the Skyfarers) in (the tradition) called (after) Kubjikā to the god Tūṣṇī (who is the consort of the goddess) Śavarī who has been made manifest. The goddess wanders in the divine Wheel of the Sky (*khacakra*) like a bird (*khaga*) within Vakrikā's *maṇḍala*. (20)

Khageśī, Kubjikā, Śavarī and Vakrikā

In this way the Tradition of the Goddess (*devyānvaya*) spreads out (under) the solitary tree (of Navātman) in the middle of the sacred seat by means of the rays (of its powers). There are said to be two Siddhas who reside in (this), the other most excellent of cities, the Wheel which has as its sole lord (*nātha*) Tūṣṇi (the Silent One).

Silent for an aeon (*kalpa*), (he) entered the Supreme Abode and (his entry therein) is the current of overflowing bliss. That is the Kadamba (bud) at the end of the Tree that emanates the Supreme Energy on the Path of the Left.[45] (21)

By (this) sudden penetration (*sadyāveśa*), Vāmā emits (*vamayati*) nectar along with that Kadamba (tree) which is the first (of all). Established there is the (Tradition of the) Lion which is the teaching of the Command of Realisation (*pratyayājñā*) born of the (Six Yoginīs) Ḍa Ra La Ka Sa and Ha (in the corners of the hexagram).

Raudrī's Lion's Gaze (*siṁhāvaloka*). (bestows) the treasure of the (entire) range (*kula*) of insight, (just as it can) punish (*nigraha*) or (bring about) realisation (*pratyaya*). (She is) the intense form of the Command (*tīvrājñā*), the radiant energy (*tejas*) of the Siddhas which is the Teaching of the Lion (imparted) by means of the oneness (*samarasa*) (of all the energies). (22)

There is another divine aggregate of letters in this House, the City of the Moon of the triple goddess (*bhagavatī*). It is the Island of the Moon and, saluted with respect by the best of the gods, it is the House of (the goddess) who is called `Full' (*pūrṇanāmā*).[46]

The goddess there is (the Full Moon) full (of all her energies) and is well established on the path of the Krama. In the tradition (*anvaya*), she is (the goddess) Kukārā. (She is the) energy (that operates) in each division and, within the beautiful Sky of Emptiness (*suśuśiragagana*),[47] she is free of the networks of the clouds (of ignorance). (23)

Endowed with the energy of passion (*madanakalā*), she churns (Bhairava), the Churner (*manthāna*), within the aggregate (of letters) that (serve as) the churning stick (*manthāna*) of division. Within Bhairavī is Bhairava's most excellent City of Speech (*bharatipura*) which is the Clan (*gotra*)[48] and the teaching.

In the middle is a single *maṇḍala*. May that teach (all beings) what is good (*śiva*). The Command of realisation is in the Hermitage[49] and that Command spreads out by means of the various sacred seats. It is fixed within authority and is located in Koṅkaṇa. (24)

By (its) unimpeded movement, it is born within the wheel in the centre on the auspicious Peak (syllable) on the Stone.[50] He is a Siddha, one who has achieved the vitality (*vīrya*) (of ultimate reality). The Kadamba (tree of Navātman) within the root of the root (of the Point is generated by) the churning of (Śiva), the Sun and (Śakti), the Moon.[51] (The Command) is perpetually established there and (assumes) the form of letter (*varṇa*) in the hexagram by the movement of experience (*anubhavagamana*). Its fame is the (power of the) Kula's Command which, in the middle of the Tamarind Tree (of the Point), saves (the fettered) very quickly. (25)

From that comes accomplishment (*siddhi*) in the current of Kula. The mass of knowledge (*jñānarāśi*) is aroused by the rays of (Śiva), the Sun and (Śakti), the Moon. (The reality that is) established in this way in the centre of that is on the path of the (manifest and) active (*udita*) Yoni and is divided into sixteen parts (of the energies of the Moon).

There are another twenty-seven divisions[52] propagated on the earth (in the Transmissions of) the Child, the Youth and the Aged. Another (Transmission) is that of the Skyfarer (*khecara*). Concealed above that, it is well known. (26)

This is the *maṇḍala* of yogis to which the three worlds bow (in adoration) and, in the centre of the sacred seat, it is well known. There is one (the goddess who is the) Gesture (*mudrā*) in the Root *Sūtra* that removes the veil of darkness and gives liberation to those who know it.

(This), the Root *Sūtra*, is on the lips of Śiva's (appointed) teacher and it has been uttered in this tradition. She herself, (the goddess) called Kujā, generates desires and disturbs (the fettered soul). She, the venerable (goddess) Kujā, whose most excellent body is aroused (with divine passion), is the Divine Liṅga. (27)

(This) teaching, in the form of a *Sūtra* that has been divulged (*prathita*) from Śiva's abode, the Śākta variety (*śaktibheda*) of the Kaulika (teachings). By means of the sacred seats it gives rise to the diverse lordship of (each) sacred seat over the (entire) universe.

I praise the Wheel, the Lord of the gods, Siddhanātha, the most excellent of the lords and the glorious emanation (*vibhava*), persistence and destruction (of his creation). By name (he is) the form of the syllable AIṀ and prevails over the earth which is endowed with the entire variety of Principles. (28)

It is called the sacred seat of Yoga (*yogapīṭha*).[53] Revealed in the world along with the various the lineages (*oli*), it has been explained (*ākhyāta*) in Koṅkaṇa. The root Vidyā is within it. It is the energy (*kalā*) of the Sun and Moon, the well-known Vidyā of the Peak (syllable HSKHPHREṀ).

Elevated by the destruction (*hāna*) (of impurity) and (her) utterance (*uccāra*), she saves (the fettered) from the fear of conditioned existence. In the bright half of the lunar fortnight she is full (*pūrṇā*). (She is known) by this name in the venerable City of the Moon whose abode has been revealed (in this scripture) and possesses authority over (all) the sacred seats and (sacred) fields. (29)

(The goddess) Aghorā, linked with Ghora, is intent on devouring (the Moon) in (Jālandhara) the venerable country in the South (*yāmyadeśa*). On the left (in Pūrṇagiri) is the venerable Siddhanātha who has been revealed by the Moon. (The sacred seat called) Kāmarāja is in front of that.

Above it is (the goddess) called Parā who churns the honey (*madhu*)[54] and is well merged into the Half-moon. The churning takes place in the centre of that (as does) the burning away of impurity. The triple energy (*triśakti*) is born there. (30)

(This triple energy) called will, knowledge and action is Parā who is (both) supreme (transcendent) and inferior (immanent). She is born as the Command of the Tradition (*anvayājñā*). The supreme Command goes there to the centre on the left (*vāmamadhye*) and is concealed in the Knot of Brahmā.[55]

Once she has pierced the aggregate of Wheels (*cakrasaṁgha*), she enters the Void by exiting through Suṣumṇā and, having pierced through the Cavity of Brahmā, she wanders on the Path of the Void by means of the three divine paths. (31)

In an anticlockwise movement (*vāmāvarta*), Śakti has assumed a crooked body (and so is) Rudra's energy who is the Triangle *(trikoṇā*). Intent on `the churning of passion' (*madamathana*), she fills the Six Wheels with the five varieties of the vital breath (*marut*).

She transports the moving breath full of love (*sneha*) (through its) two aspects, empty (*hīna*) (exhalation) and full (*pūrṇa*) (inhalation). (These are) withdrawal and emission (which are) the energies (*kalā*) of the Sun and Moon. At midnight she is independent (of them).[56] (32)

Indeed, she is the venerable one called Kubjikā who lives within the Heart in the Kadamba (tree) in the midst of Silence. She constantly generates satisfaction. She is the divine energy called Parā (the Supreme) who quells the fear of the fettered.

She plays with the Six Wheels and, flowing in the supreme body, she wanders (throughout the universe) in the form of the (sacred) syllable (AIṀ). Established in the body (*piṇḍa*), she blossoms. She is the energy of the Moon of Nectar and is well merged in the centre of the Liṅga. (33)

One should know her to have the form of a Liṅga. May she, the hidden energy (*guhyaśakti*) and the Triangle (Trikoṇā) remove the fear (of the fettered). She, the Divine Command and mother of the world, emanates this universe. Established in the scripture, she is wealth (*lakṣmī*).

This is the current (of the teaching) in the form of a *Sūtra*. Known in the Age of Strife, it is the first *Sūtra* (*ādisūtra*) of the tradition. It is divided into many varieties and, fashioned by the parts (*pada*) of the Krama, it is set in resonant metres. (34)

(This), the teaching of the Path of Power (*śaktimārga*), which destroys the impurity of the fettered and is equal to Kaulīśa (himself), has (thus) been imparted. This Kula reveals in the Kali Age (this), the secondary *Sūtra*, which is in the form of a (primary) *Sūtra*, and the Root *Sūtra* (itself). (35ab)

This is the (thirty-eighth) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description concerning *the Root Sūtra which is the Womb (yoni) of the Ocean of the Kula Tradition* concerned with the language of Kaula practice (*kulacaryā*). It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER THIRTY-NINE

Concerning the Pure Division (*vimalabheda*)

Śrīnātha meets the Goddess surrounded by her host

Śrīnātha said:

I salute (the teaching) that has come down through the succession of the series (of teachers and disciples) and has been expounded from the (very) pinnacle of the Command. (I salute) the lineage (*santāna*) of the Siddhas and Śrīnātha, the teacher of the universe. (1)

The mistress of the God of the gods, Kuleśvarī, (immersed) in a state of bliss resided in a divine, beautiful and marvellous place. This was a pavilion made of wonderful pictures and adorned with jewel necklaces. Strewn with countless (kinds of precious) cloth, it was surrounded with many trees and creepers. It had ramparts and arches and was decorated with many jewels. Very beautiful with its (many) large gems, it was made by Viśvakarma (himself).

(The pavilion was filled) with ṛṣis along with the heavenly attendants (*kinnara*), snakes, Vetālas, ghosts, Rākṣasas, assemblies of Yakṣas, hosts of Maruts, Brahmā, Viṣṇu, Indra, Rudra and the rest. The hosts (there were as numerous as) the stars and drops (in the ocean), Yama, Varuṇa, Kubera and the rest, the Vasus, Vasudhā and the rest, Nandi, Skanda, Mahākāla, Bhṛṇgi and fierce Vināyakas. It was surrounded by the chief groups (of divine beings) including Vīrabhadra and the rest along with the spiritual sons, those who know the Rule, adepts, teachers and countless yogis who know (ultimate) reality. There were all the troupes of Yoginīs, (including) those (Siddhas) born of Kula, knowledge and Yoga and, endowed with knowledge and wisdom, those born from mantra and Tantra. (There were) those who are innately such (*sahaja*), those born from the sacred seats, wombs, the sacred fields, the Yoni, and the meeting places (*saṁdoha*) of the Rule. Amongst (them were the) Ḍākinīs and Rākinīs along with the Lākinīs and Kākinīs, as well as the Śākinīs and Hākinīs. (Thus) adorned with Yoginīs, (it was also) surrounded by other kinds of divine and faultless beings, including Guhyakas and Pūtanās. (2-12ab)

When Śrīnātha, filled with humble respect (*vinaya*), saw this, he asked: "O you who are called the Yoni! O venerable Kujeśānī! Anākhyā (the Unnameable)! O Supreme Goddess! O goddess! You who are the ocean of Kula! Today also I have a doubt. O Kuleśvarī, (what) I am (now) asking you about is the tradition (*āmnāya*) of the Sadyojātakrama that belongs to the lineage (*santati*) of the Yoga of the Accomplished Command (*siddhājñāyoga*). (12cd-14)

This pure variety of the House (of the Western Tradition) contains the extensive purport of many varieties. Possessing all the conventions, it is secret and extremely hard to acquire. Endowed with the language of the Command (*ājñābhāṣā*), how is it (and in what form is it) established in the teacher's mouth (and orally transmitted)? (15-16ab)

O goddess, this is my (my) request. Tell me (the teaching that is) free from doubt. O goddess! Bhairavī of the Peak of the Stone![1] Be compassionate towards me (and responded to my request)." (16cd-17ab)

The Higher Groups of Six (*uttaraṣaṭka*) – the Formation of the Yoni (*bhagodaya*) and the Emergence of the Triangle, the Hexagram and the Centre

The venerable (goddess) Vakrā said:

O Śambhu, well done! I will tell you about the arising of the Transmission in all its details (*diśādiśa*). (I will tell you) the extensive meaning of the convention, the ocean of the tradition (*anvaya*) (of the goddess) Kukārā. This is the division of the higher groups of six (*uttaraṣaṭka*) as I have acquired it in the past. I will tell it to you thus. O you who have beautiful long eyes! Listen. (17cd-19ab)

Śrīnātha said:

O goddess, today my practice of austerity in the Kula tradition has born fruit. Today, O great lord, I have attained liberation by your grace. Tell me about that (teaching) once more as it truly is, just as you have acquired it in the past. (19cd-20)

The venerable (goddess) Vakrā said:

Akula and Kula along with the realisation (*viniścaya*) of Kulākula and above that the Candrikā (Moonlight) Kula[2a] that is split up into the energies (*kalā*) beginning with Vikalā. (21)

The Practice of the Left (*vāmācāra*) consists of the (letters) beginning with Ka and ending with Bha and is Kula. (The horizontal portion of the) Yoni is associated with (the letters) from Ma to KṢa. The right (part of) the Yoni is conjoined with A (and the rest of the vowels).[2b] (22)

The Wheel is stamped (*mudrita*) with three units (*mātrā*) (and there are) the four, namely, Pū (Pūrṇagiri), Kā (Kāmarūpa), O (Oḍḍiyāṇa) and Jā (Jālandhara). Outside that is (the hexagram) with six parts (*ṣaṭprakāra*) beginning with the (Wheel of the) Foundation and ending with (the Wheel of the) Command. (23)

This Kaula (reality) is this (group of) six parts (*ṣaṭprakara*) born from the Kula of six sheaths (*ṣaṭkośa*). It is the Supreme that is both supreme (transcendent) and inferior (immanent), the Kula of the Heart that is in the sphere of Kula.[3] (24)

Akula is located in the centre of the Yoni.[4] It is a ball, the form of the letter Ṭha.[5] All the energies (*kalā*) are within it. Above that is the Half Cart (*śakaṭārdha*).[6] (25)

The light of a quarter of a quarter of that (Half Cart) shines radiantly above beyond it, like a beautiful lamp. Established there (in the Light) is the Supreme Energy which, threefold, is located in the head.[7] (26)

She should be know to be triple as Vāmā, Jyeṣṭhā and Raudrī. Jyeṣṭhā has emerged in the right (corner), while Vāmā is on the left path. Raudrī is in the middle of these two and has emerged from the remaining energies (*kalā*). (27-28ab)

She should be known to be triple by (her) movement that reaches the extreme limit of all things (*sarvāvadhi*). Her form is that of a Yoni and she is pervaded by the possessor of all the energies who is in the centre (within her).[8] (28cd-29ab)

That Yoni is stainless Māyā[9] and, doubled, she is the girdle (*mekhalā*) (that surrounds the Yoni in the centre).[10] Know that the Half Cart is Bhairava, the Lord of Light. (29cd-30ab)

Bhairava, who is the act of filling (all things) (*bharaṇa*)[11] is the (universal) cause which is said to be Yoga. He is in the centre of the Energy of Bliss (*ānandaśakti*), impelled by knowledge and wisdom. (He is) the perfectly pure bliss of the Krama that is (filled with) joy (*nandita*) by (the goddess) who is the bliss of the Command.[12] (30cd-31)

Bliss, which is the delight that bestows eternal bliss, is the Western Tradition (*paścimāmnāya*). Who is not freed from the bonds of fettered existence, once known the Lineage of Bliss (*ānandasantati*)? (32)

Or, the eternal Bliss of Stillness[13] (*nirānanda*) (is realised) when one attains the flawless plane (of existence). Indeed, (true) bliss is the Bliss of Stillness that illumines the Three Worlds. It is the unfolding (*prasara*) of all the elements as (the reality) called the `Abyss of the Yoni' (*yonigahvara*). (33-34ab)

Bliss is the goddess who is in union with (*utsaṇgagā*) Navātmaka (Bhairava), the ninefold god (*navadeva*). (She is) the state (*avasthā*) (that arises) from the bliss of creation (*udbhavānanda*) and is the bliss of consciousness within the Self. (34cd-35ab)

The Cart (*śakaṭa*) is the Cavity (*suśira*) (of the Void) and is known as the principle of the three qualities. O Śambhu, *sattva* is the consciousness (*vijñāna*) of Kāmākhya, *tamas* is derived from Jālandhara and *rajas* is Pūrṇagiri. (Such) is the teaching concerning the Kula of the three sacred seats. (35cd-36)

The Body (*piṇḍa*) (of Navātman) in the triple universe is, in accord with the sequence of the gross elements (*bhūta*), Uḍḍiyāṇa. That indeed, is the god, (the reality) without form which is Kula in the centre of the Void (of the transcendent).[14] (37)

One should known that to be the realisation of knowledge (*jñānavijñāna*), the liberation of the Siddhakula. Kaulīśa, the Lord in the Void (of the transcendent), is in the centre of the sheath of the navel.[15] (38)

She is Kaulinī, the Energy (*śakti*) who is paramount and endless. By Bhairava's will, her Kula is divided into three, three Points and three Peaks (*śekhara*). (39)

There, in the centre, is the Liṅga. It is the ninefold (*navātmaka*) Bhairava. Beyond the energies (*kalā*), he is endowed with (all) the energies. He is conjoined with Parā (the Supreme Goddess) and he conjoins (those in bondage to her).[16] (40)

This (Liṅga) is the Gander (*haṁsarūpa*) perceived in the Void (*ākāśa*) (of the transcendent). And (the goddess) passionately desires the Body (*piṇḍa*) (of Navātman)[17] called Piṅgala Bhairava. (41)

Kulākula is the bliss of the Moon located in the centre of the bliss of the Sun. Its development (*vṛddhi*) is the supreme Line (*rekhā*) that (represents) the interiority within the centre.[18] (42)

That is Śiva merged in the Moonlight (*candrikā*). That is the plane of the Skyfarer directly apparent.[19] In this way, the Wheel that is present within Yoga is divided into three measures (*mātrā*).[20] (43)

The arising (of Uḍḍiyāṇa) is the Yoga of the Mothers (*mātṛkā*).[21] Another is the arising of Jālandhara on the left. Know that according to the Teaching of the Lion (*siṁhaśāsana*) the transmission of Pūrṇa is on the right. (44)

The (sacred seat) called Kāma is located in front of them and is adorned with the Yoni (the letter E) and the letter Ī. She has emerged from the centre of the Void (of the transcendent) and is the generation of the extension (of emanation) (*prasarodbhava*) that takes place progressively.[22] (45)

Such is the arising of the Yoni (*bhagodaya*), the knowledge that has come down through the succession of the series (of teachers and disciples). It is (the Krama) divided into twenty-seven parts (*pada*).[23] It has six sections (*prakāra*) and its meaning is profoundly secret. (46)

In this way, one should divide up the secret *maṇḍala* with the divisions of the Krama. The (hexagram which is the) girdle (*mekhalā*)[24] (of the Triangle thus) divided up into sections is called the Transmission of the Youth. It sprinkles (with the nectar of realisation) this Kaula (universe) right up to the world of Brahmā. (47-48ab)

Kāmadeva is in front. He is white and is skilled in emanation. Viṣṇu, who wears yellow, is on the left. He is established in the principle of persistence. Rudra, who wears red, is on the right. He is the great lord who brings about destruction.[25] (48cd-49)

Such is your triple form, the endless Kulakrama. This Kulakrama is called Kaula in Koṅkaṇa. (50)

The City of the Moon is the beautiful House (of the Tradition). It is (the inner core of the *maṇḍala*) completely covered with the Meru Liṅgas (of the letters). The Command is certainly transmitted to one who drinks the nectar there within it. (51)

O god, the nectar of the tradition (*saṁpradāya*) is the coming together of Śiva and Śakti. These are said to be the two fundamental (*pradhāna*) Flowers and they are both the Mother (Ambā) and the Lord (Nātha).[26] (52)

The Eight Mothers and the Origin of the Scripture

Emanation takes place by their union and so is called the letter A. The Command of the ocean of the letter A is the mother of the universe who resides in eight abodes.[27] (53)

O god, as Brahmāṇī and the other (Mothers), she is Lakṣmī who is liberation itself. Then, by many kinds of divisions, she is divided into sixty-four (energies) (*aṣṭāṣṭaka*). Then, she who is said to be (of just) one kind arises progressively sixfold (as the *maṇḍala*). (54-55ab)

Seventy million (verses) (*saptakoṭi*) is the extent of her tradition (*anvaya*) that has emerged (in this way). The *Manthānabhairavāgama* consists of more than a million million (verses) (*lakṣakoṭi*). The essence extracted from within it is (this) tradition of seventy million (verses).[28] (55cd-56)

(This) scripture, pure as clarified butter, is enveloped in the creeper of the network of ritual (*kriyā*). This secret is the essence, the most excellent Śaiva teaching (*śāsana*). This is the division of the first descent (into the world of the scripture). It is the teaching (*nirṇaya*) concerning the path of emanation. (57-58ab)

The Projection of the Transmissions, their Contents and Groups of Six

Now I will tell (you) the Yoga that has come from the mouth of the Yoginīs. (I will tell you) the Language (*bhāṣā*) (1), the Gesture (*mudrā*) (2) and the Gaze (*dṛṣṭi*) (3), along with the series of the letters of the alphabet (*mātṛkā*) (4), the (sacred) places (*sthāna*) in the deposition (of the letters and mantras) on the body (5) and the threefold Transmission of the Masters (*gurvāmnāyakrama*)[29] (6). He who knows (this reality with) six parts (*ṣaṭprakāra*) is (truly a full and) clearly apparent member of the Western Tradition. (58cd-60ab)

The Gesture of the Monastery (*maṭhamudrā*), the Gesture of the Cave (*guhāmudrā*) and the Gesture of the Yoni (*yonimudrā*) as the third.[30] The (goddesses) Karālā (Horrific), Padminī and Siddhi (Success) have arisen from (this) triad within (this) division (*bheda*). (60cd-61ab)

There are three lines (*vallī*) of Siddhas and three Kula trees. The Transmission (*krama*) is the threefold Yoga of the Child, Youth and the Skyfarer. This Tradition (*anvaya*) (consists of the triad of) gross, subtle and supreme and (every) other triple division.[31] (61cd-62)

The sequences of the Five Jewels, namely, the five beginning with Brahmā, are established in the universe.[32] (Knowledge of) the three Gestures is the supreme knowledge conceived to be the Path of the Monastery (*maṭhamārga*). (63)

Once the form of spring has been added (?),[33] the House (of the hexagram), which is the Monastery[34] with six parts, (is complete). (64ab)

The knowledge of the Verses is very divine. (Indeed) it is said to be more divine than the divine.[35] (64cd)

(The goddess) was previously said to be within the letter Ṭha (that represents the Point)[36] (and in all the *maṇḍala*) up to Kailāsa in the west. Again, one should know the Monastery (*maṭhikā*) with (its) divisions into Ānanda and the rest.[37] (65)

Once this has been correctly known in this way from the teacher, one should commence the rite of adoration of the Monastery (*maṭhapūjā*). The world (*bhuvana*) and the Great Place (*mahāsthāna*)[38] – each single one has arisen out of bliss. (66)

The division into Monastery (*maṭha*), Gesture (*mudrā*) and the Transmission has been explained in the (scripture of) seventy million (verses). He who knows this, the most excellent division, is a teacher. (67)

The Location of the Kulakrama in the Six Wheels

The Kulakrama has six aspects, namely, Ānanda, Āvali, Prabhu, Yogin, Atīta and Pāda.[39] The sixteen spoked (Wheel) is Mahānanda, the twelve spoked (Wheel) is Āvali, the ten spoked (Wheel) is said to be Prabhu, while the six spoked (Wheel) is called Yogin. The four spoked (Wheel) is Atīta, while the two spoked (Wheel) goes by the name of Pāda.[40] This knowledge, which awakens to the meaning of the Verses, has six aspects. The one who knows the recitation of the Verses and knows this (in every way) is successful (*siddhibhāk*). (69-71ab)

The Six Groups in the Four Transmissions

The Transmission of the Child

This Kaula, which has come down through the succession of the series (of teachers and disciples), has three aspects namely, the Tetrad, the Pentad and the Triad along with the Mother (Ambā). O Śambhu, this is the Transmission of the Child I have concealed in the past. (71cd-72)

The Transmission of the Youth

The six aspects are: the Tetrad, the Pentad, the Hexad, the Tetrad, the Pentad and the Triad. He who knows them in (their) internal and external (forms) should be known to be a suitable member of the Krama (*kramika*), otherwise he is so (only) in name. O god, this is the Transmission of the Youth, pleasing to the Yoginīs. I have explained (this same) Transmission of the Youth before.[41] (73-75ab)

The Transmission of the Skyfarers

Four tetrads, five pentads, six hexads, a triad of triads, O handsome one, this is the fearless Transmission of the Skyfarers that has six aspects.[42] Today, I have revealed the Khecara (Skyfaring) lineage (*santāna*) of the Siddhas. (75cd-77ab)

The Transmission of the Aged

Four tetrads, the Pentad multiplied five times, the Hexad divided into six kinds, the Tetrad of four kinds, the Pentad divided in five ways and, after that, the Triad of three kinds – this is the gross Transmission of the Aged (*vṛddhakrama*) attended by Siddhas and Yoginīs. (77cd-79ab)

O god, in this way, I have revealed the state of the (Transmission of the) Aged. It is the tradition (*anvaya*) of the Supreme Lord and should be kept extremely well protected (*abhiguptatara*). One should know the essential nature of the Kulakrama with six parts.[43] (79cd-80)

Such is the fourfold knowledge, the Transmission based on realisation (*pratyayapūrvaka*). He who knows it along with the oneness of (its) inner and outer (forms) is (truly) a teacher. (81)

In this way, O god, the Triple Transmission is said to be the (most essential) meaning of (this) scripture (*saṁhitā*). O god, he who knows the *Śrīmata* along with the terminology of the secret convention is one who knows the scripture (*āgama*) of the Śrīkula and is fit to be conjoined with the Lord (Nātha). (82-83ab)

O handsome one, when the Age of Strife began, it was hidden in the great sacred seat, that is, in the letter Ṭha (that is, the Point), which is the Cave[44] of the venerable (goddess *śrīguhā*) in the temple of the spring of gold (*kanakamañjarimandira*). This was done, in accord with the Rule, by means of the secret convention. (83cd-84)

The Wick of the Navel is the female serpent and the Conjuction of the Thunderbolt (*vajrasandhi*) of the two door panels. The Kula scripture should be given to one who knows the conventions here also.[45] (85)

Śrīnātha said:

The great secret of the convention is hard to understand and hard to acquire (even) by the gods. Out of compassion tell (me that which is) free from fear as it truly is. (86)

The venerable (goddess) Vakrā said:

The Navel is the Root. Kula is Meru while the Wick is the Self and Mālinī. (The teaching) belonging to the succession (of teachers and disciples) is the Knowledge of the Snake. The Conjunction is the arising of the Transmission of the Command (*ājñākrama*).[46] (87)

The three lineages (*oli*) of the three Siddhas in the heart and the three incarnations (*avatāra*), one kind with four divisions, four kinds and then three kinds – he who knows the Kula variety (*kulabheda*) is one who guards the Transmission (*krama*). (88-89ab)

The three Peak (syllables), the three seed-syllables, the Seed of Energy, superior and inferior, the Octad, the ninefold (*navātman*), the sixfold (*ṣoḍhā*) and that divided into twelve. (89cd-90ab)

The Skyfarer (Khecara), the path of Khecarī, and the Transmission of the Rule (*samayakrama*), the Tree, the Kula of the Thunderbolt (*vajra*) and the Island – (this is) called the hexagram of the two door panels.[47] This is the knowledge of the energization (*dīpana*) declared in the division beginning with KĀ (*kādibheda*). (90cd-91)

He who knows the Kulakrama, the Vidyā, the Krama of the *Maṇḍala* of the Rule is one who awakens (others to the meaning of the) Mata. (92)

(An explanation of) the Triple Principle, the Triple Seed, the Tetrad, the Hexad, another Hexad and the Octad (can be) had from the teacher's mouth. This is the Transmission called the Descent of the Principles (*tattvāvatāra*) the (wise) know from the teacher's mouth.[48] (93-94ab)

Five and five, the five of the (goddess) Parā, the five of the (goddess) Aparā, the Hexad, the Hexad and, again, the Hexad and, after that, another Hexad, the Tetrad which is along with the four, while the pair is said to be of two kinds. O handsome one, I have declared the group of ten constituting the Transmission of the Youth. (94cd-96ab)

The five, five and five along with the other Hexad is the division of the Pure Transmission (*vimalakrama*) that has come down through the succession of the series (of teachers and disciples). (96cd-97ab)

Four tetrads and another four, the other Triad, the Vidyā and the twelve seed-syllables – such, O god, is the Transmission of the Sacred Seats that has come down through the succession of the series (of teachers and disciples). He who know (this) aspect (*prakāra*) (out of the six) is praised in the Transmission by the Heroes. (97cd-99ab)

The Gesture, the *Maṇḍala* of the Rule and the Twelve Verses[49] should be kept hidden with effort. (All this) should be studied (with a teacher). It has not been written down. (99cd-100ab)

O handsome one, the Twelve Verses are kept well hidden. (The teaching transmitted orally, whispered) from ear to ear is not to be given carelessly. (But) having known it, success (*siddhi*) comes by the utterance (of the mantras). (100cd-101)

He who, adorned with the Five Jewels,[50] knows the authority of the six parts and the reading of the Mother's (Ambā) Twelve (Verses) and is intent on the seed-syllable of power (AIṀ), has seen the Gesture of the Skyfarer (*khecarīkrama*) and (knows) the Three Vidyās is a teacher who awakens (others to the meaning of the) tradition (*mata*). Who is not freed from bondage once he has obtained a teacher such as this? (102-104ab)

O Mahāśambhu, the knower of reality who knows the Mahantārikā (Vidyā) conjoined with the (other) two Vidyās, the six Peak (syllables), the Octad of Tāraka and Mālinī is a teacher who bestows liberation. (104cd-105)

First comes the Tetrad of four sacred seats and the four deities. The Pentad is that denoted as the (five) Jewels.[51] Then comes the Hexad of Yoga. There are four Siddhas, and another is the Pentad along with the Pure Command (*vimalājñā*). Next comes the other triad of Siddhas and Ambānātha. (Thus the teaching) that has come down through the succession of the series (of teachers and disciples) has six aspects. (106-108ab)

The first Flower, which is the group of four (transmissions?), is linked to the rite of the deposition (*nyāsa*) (of syllables and mantras on the body). There is no doubt here that it is (regularly) watered (in this way). One should not cause (any) transgression of the Command. O god, in this way, the Mata*,* the supremely astonishing secret, has been explained. (108cd-109)

The convention concerning the *maṇḍala* of the Sacred Seats, the Assembly of Letters, the Liṅga, Mālinī, the Eight, the four Weapons, the Root of the Five, Yoga and the teaching concerning the Four Houses – O god, he who knows this ninefold division is a (true) teacher. (110-111)

The houses, the (sacred) fields, the sacred seats, the four doors of the sacred seats, the secondary sacred seats, and the meeting places (*saṁdoha*) – (this is) the sixfold characteristic of liberation. (112)

The nine conventions are (as follows): the convention of the three Gestures, the convention of the sacred seats, the convention of the (sacred) places (*sthānasaṁketa*), the convention of the flowers,[52] the three (types of) authority, the Assembly of Letters,[53] the *maṇḍala* and, O Great Lord, that which is called my Gesture. He who knows them is a (true member) of the tradition (*anvaya*).[54]
(113-115ab)

* * * * * * * * * * * * * * * *[55] Having first prostrated full length (before the teacher) one should offer (him all one's) wealth. Having circumambulated (him) a hundred times, one should salute (him) by prostrating full length (before him). (115cd-116)

If (the teacher does not know these things) in this way, then one should not salute (him) like this. But, O god, if (a true teacher) is not saluted (in the right way) the Command is taken away (from the disciple). (117)

An intense Command operates (for one) who, devoid of the Command, repeats (these mantras) a hundred thousand times. But, if he does not repeate (them) a hundred thousand times, he is at fault. O god, he dies in a short time in a family adverse (to him). (118-119ab)

O god, (one should do this) in front of the Śrīkrama, in the presence of the teacher (or) that of a well known elder who is free of deceit and delusion.
(119cd-120ab)

One should fashion their *maṇḍala*. (He who makes one for those who are unworthy of it) acts in a manner contrary (to the Rule) (*vilomakṛt*). (120cd)

One Peak (syllable), two pairs (*yugma*) and the Pentad of Flowers. (By reciting these syllables) one obtains the *Sūtra* (that teaches) the sequence of the names and Peak (syllables) (that are not found in books) from the teacher's mouth. Therefore, the Command in the Kula tradition is that there is nothing greater than the teacher. (121-122ab)

Now I will tell (you about) another variety of the Transmission which is of three kinds, (namely), Śākteya, Śāmbhava and Āṇava as the third.[56] (122cd-123ab)

The six Siddhas, the six Ages, the six Yoginīs residing on the six Paths (*adhvan*), the six sacred seats and the six Gestures – he who knows (these things) is a (true member) of the Kulakrama. He (lives) in the Yoni and (is a part of) the lineage (*santāna*). All others (merely) speak about (what they have read in) books.[57] (123cd-124)

The four Siddhas, along with (the four) gods, (the group) decorated with the Five Jewels, the Pentad of Mahantārī, the four sacred seats and then a group of four – this is the Transmission with six aspects. Such is the Śākteya division I have told you about before.[58] (125-126)

All the remaining ones are said to be the fifty Āṇava Kaulika Siddhas. Such is the Āṇava division. All this (is revealed) in the fourth Age. (127)

It is called the Ocean of the Yoni (*yonyārṇava*) and is said to be this arising of the Transmission. It has the three Gestures and is well known as the Monastery of the Churning (Bhairava) (*manthānamaṭha*). (128)

Yakṣiṇī is located in the middle of Form (*rūpa*). In front of that is (the goddess) whose name is secret. The Command that carries authority is realisation (*pratyaya*) and it has emerged from that. (129)

Śaṅkhinī who holds a conch (*śaṅkhinī*) reside there with the Gesture of the Conch (*śaṅkhamudrā*) which is the second. Kāmarūpa is well known and so is the Transmission of the Teachers (*gurukrama*) that, possessing the three Gestures, is said to be the Monastery of the Conch (*śaṅkhamaṭha*). (130-131ab)

Devīguhā (the Cave of the Goddess), Siddhaguhā (the Cave of the Siddhas), the one called Kadambā as the third and, O god, the Gesture of the Yoni (*yonimudrā*). One acquires this somewhere by (my) grace. I have (already) revealed the triple Gesture of the Goddess (*devīmudrā*) to you in the past. (131cd-132)

The goddess is the triad Kucā, Kulā and Akulī. The names (of the teachers), according to the (secret) terminology of the lineage of Siddhas (*siddhasantāna*), are MI (Mitranātha), O (Oḍḍīśanātha), ṢA (Ṣaṣṭhanātha) and Carya (Caryānātha). (133)

The lord (Nātha) is Śṛṇgāṭakeśvara (the Lord of the Triangle) and is said to be the Triad of Jewels. O handsome one, the (primary) sacred seats and the secondary seats along with the Siddhas of the sacred seats and the Line of the Siddhas is fourfold and that is present in the three Lineages (*uli*) in due order. (134-135ab)

Now, the supreme Siddha is Bindubhairava who is clothed in the nectar (of immortality). At the end of the Age of Strife (he manifests as) Mataṅgīśa, the lord of the fifth sacred seat.[59] (135cd-136ab)

The Division of the Couple (*yugmabheda*)[60] is located there and (so is) the one Gesture in the Kula Tradition. The (goddess of) the Lineage of the Liṅga known by name as the Child (Bālā) is (also) there. Such, without a doubt, is the descent (of the deity) (*avatāra*) into the sacred seats that takes place at the end of the Kali Age. (136cd-137)

Śaṅkha (Conch), Śakti (Energy) and Yoga (Union) with Mahāgṛha (Great House) as the fourth, the Pada (the Place) and Candrapura (the City of the Moon) are said to be the Hexad which is repose. Atīta (Beyond) and Āvalī are said to follow after. O handsome one, better than that is Ānanda (Bliss), the ninth house.[61] He who knows the Houses in the Kula is successful in the Age of Strife. (138-140ab)

1) *Uḍḍāmara*, 2) *Siddhakaula*, the one called 3) *Gaṇa*, 4) *Khecarīmata*, 5) the one called *Caṇḍa*,[62] 6) *Raurava*, 7) the one called *Ghora*,[63] 8) *Bhūtaḍāmara* and 9) *Mahākaula*, as the ninth where the Command has been revealed. (140cd-141)

The Kaula (teaching) has one root and is said to be ninefold. Once one has known it internally and externally, who is not freed from bondage? (142)

The group of five sacred seats is the secret division that rests on the teacher's Command. O god, the three positions of authority (*adhikāra*), Sṛṣṭinātha, Sadāśiva and the Assembly of Sounds, the eight Aghorīs, Tadgrahī **** (?). (143-144ab)

1) The Ṣoḍhā convention of Mālinī, 2) Ṣoḍhā associated with the Twelve, 3) the Ṣoḍhā of the Sixty, 4) the supreme Ṣoḍhā, 5) Ṣoḍhā, 6) Ṣoḍhinī 7) Kaulinī, and 8) Śavarī Ṣoḍhā – (the Energy) Ṣoḍhī is eightfold as is the name Ṣoḍhā (*ṣoḍhāsaṁjñā*). (144cd-145)

Thus, the eightfold Ṣoḍhā has been revealed along with (its) hidden meaning. He who knows the deposition of Ṣoḍhā[64] is the delight of the Kula. (146)

Ṣoḍhā is the Supreme One Syllable (Vidyā),[65] Ṣoḍhī is called the Sky.[66] She possesses the fourteen worlds and is the summit of the Kula of the Point Ṭha.[67] (147)

The goddess in the middle of the Kuṇḍalinī of Energy (*śakti*) is the mother of the universe. She is the Supreme (goddess) (Parā), the supreme Kālī, the energy (*kalā*) of the Supreme Goddess (Parameśvarī). (148)

The mere revelation (of the goddess) in this way (puts an end to) the repeated return (to this world of transmigration). She is said to be the Seal of the Living Being (*jīvamudrā*) and is taught in (the scripture of) seventy million (verses). (149)

Knowledge is obtained from the mouth (called) the teacher's mouth, the teacher's light (*gurudīpa*) and the abode of the Supreme Lord's (scripture) (*pārameśvara*).[68] (One acquires it) once one has heard it (uttered from there, not from books) or in any other way. (150)

The Nine Conventions

Now listen to the nine conventions in accord with the meaning of the *Sūtra*. There is one Gesture, which is of three kinds, kept hidden in the five sacred seats. The names of the (sacred) places (*sthāna*), the group of six Hermitages, the pair created by Puṣpadeva (the god of the Flowers), the three positions of authority, the secret meaning of the Verses, the Aggregate of Letters and the *maṇḍala,* which is said to be threefold.[69] The Gesture is, indeed, the Supreme Goddess. The Tāraka (Saviour mantra) is the essence of the Rule while the (secret) name (*saṁjñā*) is Mahātārikā. (151-153)

All these are most secret. They can be obtained (only) from the teacher's mouth. He who reflects in this way is a part of the Siddha Tradition (*siddhaśāsana*). (154)

Now the Hexad of Restraint (*nigraha*) will be explained as it is. Ḍakā, Raktodarā (Red Belly), Rakā, Karālā (Terrible One), Lambakodarā (Long Belly), Lakā, Kumbhā, Bhagodarā, Kakā, Kṛśodarā (Thin Stomach), Śakā, Yakṣodarā (Yakṣa Stomach), Ghorā (Horrific), Hakā, Rakṣodarā (Rakṣas Stomach) and Kulā.[70] (155-156)

She who is well known as Mother Ciñcā should be made into six kinds in this way. One should perform the rite of adoration of these deities in the Kula tradition. (157)

Light, a cloth, a lamp, a skull offered to Bhairava, flowers, meat, the divine gaze in the ten directions – one should (offer these things and) do this. In this way (one obtains) magical power (*siddhi*). (158-159ab)

The striking (of one's enemies) (*tāḍana*), theft (*haraṇa*), delusion (*mohana*), explosion (*sphoṭana*), causing yawning (*jṛmbhaṇa*), immobilization (*stambhana*), expulsion (*uccāṭana*) and murder (*māraṇa*) as one wishes – many are the signs of accomplishment (*pratyaya*) such as these (that manifest) by worshipping the group of six (goddesses). (159cd-160)

Śrīnātha said:

O goddess, tell (me by your) grace, how the (*maṇḍala*) with six aspects resides in the inner Self by knowing which (one has) compassion for all living beings. (161)

The venerable (goddess) Vakrā said:

(This) knowledge consists of six aspects. Śiva consists of six aspects. The Vidyā consists of six aspects. The Kula consists of six aspects. (162)

The rite of adoration (*pūjā*) consists of six aspects and the Kaulika (rite) takes place by means of the Sixfold Transmission. The Root *Sūtra* is of six kinds in the Sixfold Transmission of the Youth. (163)

The path of the sacred seats is part of the Sixfold Transmission. There are six hexads in sequence. The sacrament of purification (*saṁskāra*) takes place by means of the Sixfold Transmission. The positions of authority are part of the Sixfold Transmission. (164)

The Path of the Rule is a part of the Sixfold Transmission. The Jewel of Kula is a part of the Sixfold Transmission. The troupe of Yoginīs is a part of the Sixfold Transmission as is the one Peak (syllable). (165)

The Pure Meaning is part of the Sixfold Transmission. Again, the *maṇḍalas* are part of the Sixfold Transmission. O Lord of the gods, the arising of the Transmission of the Jewel of Kula takes place by means of the reality of the Sixfold Transmission. (166)

He who knows the meaning of the Mata is (indeed) Kuleśvara and a (true) teacher. (He attains his) goal (*sādhya*) and everything else (if he achieves) the accomplishment of the Command (*ājñāsiddhi*) in the Kulakrama. (167)

Those who have not achieved the goal (*sādhya*) in this way and are devoid of the Western Tradition, are not consecrated and cannot be teachers.[71] (168)

He who does not possess the Ocean of Kula is not fit for the Śaiva teaching (*śivāgama*). The disciples they initiate do not possess anything of benefit (*kalyāṇa*).[72] (169)

O god, one should not clearly set down to writing this Krama teaching (*kramārtha*) that has come from (the teacher's) mouth. It is always in the teacher's mouth and it is obtained from the teacher's mouth. He who is thus connected to this awakened consciousness (*bodha*) possesses the Kaulika Command. (170-171ab)

One should not keep the company of false (people just as) one should not abandon the company of the righteous. One is destroyed by the company of false (people) even if one is Kuleśvara himself. Similarly, (even the very) cause of purification is destroyed by the company of false (people). Thus even one who is pure is destroyed by association with the fettered. (171cd-173ab)

One attains liberation by abandoning all the opposites, by having compassion for all living beings and by (viewing) friend and foe as the same. (There is) no other way. (173cd-174ab)

Those householders who have been consecrated and attained the status of a Kulācārya and have, even if due to an error, transgressed the practice of the Rule (will) not (achieve) liberation if they break the Rule. This is the Supreme Goddess's Command. (174cd-175)

This is the (thirty-ninth) chapter called *Concerning the Pure Division*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command.

CHAPTER FORTY

Concerning the Venerable Knowledge.

Preamble

Śrīnātha said:

O goddess, I have heard the secret as it truly is of what is concealed in the tradition (*anvaya*). But even now, O Lord, I am confused (and so) I am asking (you about this) again. (1)

O mistress of the gods, the (many) paths of the left and the right are full of illusion and deceit (as are) the Siddhāntas, in (their) ten and eighteen divisions.[1] Here (in the Kubjikā tradition) the teachers (*ācārya*) are experts in (both ritual) knowledge and Yoga and should be known to be the best. (2-3ab)

This meditative concentration (*dhāraṇā*) is (both) with seed (*sabījā*) and without seed, (each practice is) separate as it is associated with many means to (achieve) the union of the Self (with the Supreme Principle).[2] (3cd-4ab)

(It is) established in Sound (*nāda*) conjoined with the Drop; (it is) present in oneself and established within the Heart; **** (seen) and unseen and devoid of form (it is) established in emission (*visarga*) and between the eyebrows, is arranged within the channel of Brahmā. (The same reality is) established within the state Beyond the Fourth. Located within the Door of Brahmā, established in the act of generation (*udbhava*), O bearer of the trident, this Yoga is established in disjunction (*viśleṣa*). (4cd-6)

Established in merger (*laya*), beyond merger, O mistress of the gods, it is established in the beginning. O mistress of the gods, the seed (syllable) that is the cause of success (*siddhi*) is established in all things.[3] (7)

O goddess, you who are the best of the gods, why has that been hidden again? In the past, you have uttered all these seventy million (mantras) and countless (scriptures) of the right and the left in order to grace the fettered. Why are they not successful also when they are applied at the end of the (Kali) Age?[4] (8-9)

O Lord of the universe, men suffer very much to (attain) liberation. How is it, O beautiful one, that they achieve neither success (*siddhi*) nor freedom?[5] (10)

The Upward Movement (*uccāra*) and the Development *(pravṛtti)* of the Energies, Vital Forces and the Merger of the Causal Lords

The venerable (goddess) Vakrā said:

O god, I will tell (you) what you have asked (me) about. The mother of mantras is the imperishable energy called Vāmā. O Lord of the gods, (the letters) have been hidden by (that power who is) Kuṇḍalī, and they have dissolved away (*layaṁ gatāḥ*). (So) how can that subtle, radiant energy, the supreme power (*kalā*) be known?[6] (11-12)

(Concealed within Śiva) like the power to burn is within fire, she has assumed the form of the Yoni. In the same way, Śiva is also figuratively said to possess that (divine) attribute.[7] All those who have been successful have understood that for themselves. Sustained by (Śiva's) energy they are successful, (even with a) dull intellect.[8] (13-14)

(This) knowledge impliments all the means (to realising one's goals) and affords immediate realisation. It is the bliss of the Heart of the Yoginī that has come down through the series (of teacher's and disciples). O Lord of the gods, out of love for you, I will tell (you this) in brief.[9] (15-16ab)

The Drop (*bindu*) is said to be the Self and the Self is said to be the Drop. The Supreme Drop pervades (all things) and is established in (the reality) beyond destruction (*layātīta*).[10] Once one has know the two Drops in this way, one is freed from the world of transmigration.[11] (16cd-17)

The Lord of the gods, the Lord who possesses (all) phenomenal existence, resides in the lotus of the Heart. He is endowed with the four energies (*kalā*) and (his) form is (like) that of a spark from fire.[12] (18)

Spiral

Radiant like a lightning flash, he abides within the belly of Māyā.[13] Māyā is called the sleeping snake whose (coiled) form (is circular like) an earring (*kuṇḍala*). (19)

Left Line

Thus, she who is the conscious nature of the Self is called Kuṇḍalī. O handsome one, the individual soul is led up and down by her. And she is said to be Māyā, that is, Kuṇḍalī, turned towards the left (*vāmāvarta*).[14] (20-21ab)

Straight line

Jyeṣṭhā is the second (energy). She is said to be like a straight line. Her form is (extremely subtle) like a lotus fibre and is said to be on the path of emanation.[15] (21cd-22ab)

Triangle

Raudrī's form is (triangular like) a water chestnut. She is said to be the obstructing (force) (*nirodhikā*).[16] (22cd)

(Again), your Tetrad is said to be (the powers of) will, knowledge, action and Viśvī (the Universal One). The fifth is Śiva's energy, who 'comes and goes'. One (energy) drags (the breath) upwards and the second (energy) (pulls) the breath downwards. O dear one, Anacka (Unstruck Sound) arises by the union of these two.[17] (23-24)

(The energy of) the will that formulates intentions (*saṁkalpa*) should be known to be the Seventeenth (Digit of the Moon).[18] One should know her to be divided into three as *sattva*, *rajas* and *tamas*. (25)

(When) the power of knowledge is not detached (from the object of knowledge), knowledge (is the result). She makes and destroys (*vikaroti*) knowledge with (its) eight aspects,[19] along with (one's) intention (*saṁkalpa*) and thought (*vikalpa*), in the course of the action (the fettered undertakes) for the sake of the transactions (of daily life). (26-27ab)

Again, (the power of) action performs the action,[20] good and bad, of the fettered soul. (27cd)

इकारान्त[२१७] पर[२१८] स्थानं यत्र[२१९] विष्णुः[२२०] संतिष्ठति[२२१] ।

One should know that Viśvī is (the energy who) awakens. She awakens the power of consciousness. She is the fifth energy who is established as the foundation. (28)

There is only one supreme energy (with diverse forms) in accord with the diverse activity (in which it is engaged). O dear one, under its sway, (the individual soul) enjoys (worldly experience) in the (domains) of the (three goals of life, namely) Dharma (moral rectitude), prosperity (*artha*) and sexual love (*kāma*). And that is the creation of the mind, which is *sattvic*, *rājasic* and *tāmasic*. (29-30ab)

The City of Eight (*puryaṣṭaka*) is said to be sound, form, taste, smell, mind, intellect and ego. (30cd-31ab)

(The forms of the vital breath are) Prāṇa, Apāna, Samāna, Udāna, Vyāna, Nāga, Kūrma, Kṛkara, Devadatta and Dhanañjaya.[21] (31cd-32ab)

The vital breath (*prāṇa*) is the Great Wind and its supports are the vital channels (*nāḍī*).[22] (These are) Iḍā, Piṅgalā and Suṣumṇā as the third, Gāndharī, Hastijihvā, Puṣā, Yaśasvinī, Alambuṣā, Kuhu and Śaṅkhinī, which is said to be the tenth.[23] (32cd-34ab)

O Mahāśambhu! The Drop always abides (*tiṣṭhate*) along with these things. Then come the deities Brahmā and the rest who are the denotators of the letter A and (the Drop's) deities. (34cd-35ab)

Split in two, the letter A performs its function there. The will dissolves into knowledge. Knowledge (dissolves) with action. Action dissolves into the Bindvī and Bindvī (dissolves) into Śiva's nature.[24] (35cd-36)

Governed by (these) aspects of Brahmā, they (all) dissolve away into their own particular places. Brahmā also, having withdrawn his own creations (*svakārya*), goes to (his) supreme place (*sthāna*), namely, the end of the letter I,[25] where Viṣṇu resides.[26] (37-38ab)

(Similarly), having withdrawn everything into the throat centre, Viṣṇu also goes (to his own abode). Rudra also (goes to) that supreme place where the letter U is located. Know that that is the end of the palate (*tālvanta*) the confluence of all things. Rudra also goes to the Lord (Īśvara) where the letter Ma is located.[27] (Thus), this (Energy taught) in the Tantras of the left, right and the Yāmala, has been explained (to you). (38cd-40)

[28]O Lord of the gods, conduct (*caryā*), ritual (*kriyā*), Yoga and knowledge are (explained) there (in the Tantras). All those who inquire therein (about them) are confused. (This is because) the power there (within them) that bestows divine bliss is not evident.[29] (41-42ab)

(O god who is) praised by the Heroes! Once I came to know of their (lack of) competence (to receive it), I did not tell them (the teaching).[30] O beloved, (people) have been confused by (the practice of ritual) gesture, *maṇḍalas*, vows and (austerities) such as the Cāndrāyaṇa and by (the practice of forced) exhalations, inhalations, and breath retentions and by rituals and so I have not imparted (this) knowledge (to them). (42cd-44ab)

It is because of (their) pride (in their limited) knowledge and (their) indifference that I have not been asked (about this). Brahmā, Viṣṇu, Rudra and the rest, Śakra and the other (gods), the protectors of the quarters, Skanda, Nandi and all of (Śiva's) host, the Ṛṣis, Yakṣas and Kinnaras (none have cared to ask).[31] (44-45)

The Relationship between Śiva and Śakti

(The relationship between Śiva and his power) is everywhere figuratively said to be (*upacaryate*)[32] one of invariable concomitant union. Śakti is not without Śiva and Śiva is not devoid of Śakti.[33] (46)

Like the wind and the sky, they are never seen separately. Everything is figuratively ascribed to Śakti and she is (Śiva's) instrument. Nor does (Śiva) have any other instrument with which he does what he aims to do (*kṛtya*). (47-48ab)

Śiva is taught to be mantra, while Śakti is said to be imperishable.[34] How can she who is the mother of the universe be mantra?[35] (48cd-49ab)

She is located at the end of the uvula (*lambikā*) and is said to be Nirodhī (She Who Blocks) because she blocks the upper path. Raudrī is attained by means of that.[36] (49cd-50ab)

Her goal (*lakṣa*) is born at the End of Sound where the letter A is located. That is said to be Śiva's abode (*sthāna*) which said to be at the End of Emission (*visargānta*).[37] (50cd-51ab)

That is said to be the Great Void (*mahāśūnya*) and is located at the End of the Twelve (*dvādaśānta*).[38] That is said to be the End of the Forces (*kalānta*), the End of the Vowels and the End of Mind (*manānta*).[39] (51cd-52ab)

Word (*śabda*) arises there (and becomes manifest) if Raudrī is split apart. Moreover, O god, Sound (*nāda*) also goes to Kuṇḍalinī's place. (52cd-53ab)

Know that that is the End of Sound (*nādānta*) and is above Emission. Above that is the power of knowledge said to be the upward current.[40] (53cd-54ab)

O Lord of the gods, the Equal One (Samanā), which is the ninth (station), is said to be at the end of the Pervasive (Vyāpinī). It arises there in a clearly evident way after which comes the Teacher's Mouth (*guruvaktra*).[41] (54cd-55ab)

The Abode of Brahmā (*brahmasthāna*) is said to be above the Teacher's Mouth. And that is the end of Śakti which is said to be 'merger' (*laya*).[42] (55cd-56ab)

Without a doubt Beyond Merger (*layātīta*) is said to come at the end of that. O handsome one, that is the movement (*saṁcāra*) of the Drop[43] of those who are awake. (56cd-57ab)

O god, those who are not awake are obstructed by (the power of) obstruction (*nirodhinī*). Their movement is said to be the crooked one (*tiryaggati*) which is the binding power (*nibandhinī*) of transmigratory existence.[44] (57cd-58ab)

That is said to be the enunciation (*uccāra*) (of mantra) which is constantly taking place (*pravṛtta*).[45] (58cd)

The Abandoning of the Five Causal Lords

Again, I will tell about the act of laying hold (of higher states) (*grahaṇa*), by virtue of which the abandoning (*tyāga*) (of the lower levels) (eventually) takes place. (59ab)

Having abandoned the Five Causes one attains freedom (*svacchandagati*). The yogi who has been pierced (*viddhātmaka*) (with Energy) should practice (this) visualization of Energy (*śāktadhyāna*) in this way.[46] Then he possesses the eight (yogic) powers (*guṇa*), namely, the power to make oneself small at will (*aṇima*) and the rest. (59cd-60)

The Knot of Brahmā

If, by severing the Knot of Brahmā,[47] (the energy within it) faces upwards,[48] then a state of oneness with Brahmā (arises) and (the energy) makes contact with (the essence of) Word (*śabda*). Once abandoned these two, (the yogi) travels up to the Cause[49] that is in the throat.[50] (61-62ab)

Viṣṇu (Keśava)

(There), where Viṣṇu resides, Brahmā is in the form of an effect (of the higher principle beyond) and abides there in supreme Keśava. He too should be abandoned. And, freed of the states of Nature (*prakṛti*), he is certainly liberated. (62cd-63ab)

Rudra

The mind of Keśava,[51] who is on the forehead, is also freed of activity. Keśava, who knows the (true nature of) the teacher quits his post where Rudra himself, engaged in the teacher's work, resides. (63cd-64)

O lord of the gods, (in the same way) Rudra also goes to Īśvara whose nature is radiant energy (*tejas*). That is said to be the location (*sthāna*) of the Drop, which is said to be a mass of radiant energy (*tejas*). Having abandoned the two, namely, (this) division which is radiant energy (*tejātmakavibhāga*) and the activity of the vital breath, (Rudra) travels upwards (and abandons) the modalities of Rudra's qualities (*guṇavṛtti*). (65-66)

Īśvara and Sadāśiva

In the same way Īśvara (merges) into Sound (*nāda*) along with Word and the rest into Sadāśiva. Then, conjoined with (the mental) senses, namely, the intellect and the rest and endowed with the qualities of the ego, Īśa, (his) activity withdrawn, similarly goes (to the next higher level) where the god is Sadāśiva who is the foundation of the qualities of Śiva and Vidyā (his energy). Īśvara, who knows the knowledge (contained in the scripture), is present there. (67- 69ab)

Having withdrawn his own creation, he again dissolves away. That place is (known as) Beyond Merger (*layātīta*) where there is no creation (*kṛtya*). (69cd-70ab)

Once the intellect, generated from the innate nature by ritual performed in accord with scripture, has attained the plane beyond all (others), one is freed from the bondage of fettered existence (*bhava*).[52] (70cd-71ab)

Brahmā, Viṣṇu, Rudra and Īśvara as the fourth, all assume the form of action where the Drop is located.[53]

(The actions of each one) separately are generation (*udbhava*), conjunction (*śleśa*) and merger (*laya*) respectively. (71cd-72)

The Supreme Energy, whose nature is Śiva and is beyond merger is the Drop.[54] O Lord of the gods, they move there through the foundation, step by step, successively (*kramāt kramam*). (73)

The Lord (*prabhu*) Sadāśiva also brings about the withdrawal (of manifestation) according to (his) own desire. O fair one, he is the knowing subject (*vettṛ*) at the end of the Transmental[55] on the Great Path (*mahādhvani*) (of manifestation). (74)

By merely recollecting that a man becomes (stiff) like a piece of wood. Then the fetters of good (*dharma*) and evil (*adharma*) are certainly destroyed. O god of the gods, when they have been destroyed, he attains the supreme level (of existence). (75-76ab)

As long as the body (is fettered) with (these) great bonds, he is never freed. Even if the sixfold reality has been purified,[56] as long as this is so how can there be liberation? (76cd-77ab)

Thus O god, I have told you about (how the lower states are) abandoned (*tyāga*) with knowledge (*vidyā*) by virtue of which one who is endowed with all the qualities reaches Śiva's state where Kuṇḍalī, the energy called Anāmā (Nameless),[57] who is the Transmental (*manonmanī*), (resides). (77cd-78)

She possesses three energies and is both (the energy that) awakens (*bodhanī*) and obstructs (*nirodhanī*). One should know her to be obstructive when she is below (*adhogā*) and awakening when above (*ūrdhvagā*). The one (energy thus initially) assumes two states. Subsequently, she is divided in countless way.[58] (79-80ab)

She creates the entire universe from Brahmā up to the (lowest) world. And she is certainly attained[59] by means of (her) diverse functions. (80cd-81ab)

The subtle Vāmā is said to be emanation, the subtle Jyeṣṭhā is intent on protecting (the universe that has been emitted), while Raudrī is (said to be the power) that withdraws (it). (Thus) the one (power) is threefold.[60] (81cd-82ab)

Again, she is said to be fivefold, eightfold and ninefold. She is (also) split into fifty divisions.[61] (Thus) she who is endless has become of endless (forms). (82cd-83ab)

O Lord of the heroes, she should be known (as she is in herself) through (her) supreme form. She pervades each and everything in the universe of speech. (83cd-84ab)

Therefore, Kuṇḍalī, who is consciousness (*jñāna*), is called Māyā.[62] O god, once she has been attained, (the yogi) transcends the mind (*unmana*) and is devoid of it. (84cd-85ab)

Endowed with the eight yogic powers *(guṇa)*, omniscience and the rest and endowed with the attributes in (each of the five) causes (of phenomenal existence), he plays (freely).[63] (85cd-86ab)

After that he goes (to the supreme level) and, having dissolved (everything away), the (resulting) Void (*śūnya*) is Śiva.[64] (86cd)

That Place (*sthāna*) is beyond mind (*manātīta*). It is the Cavity (*śuṣira*) at the End of the Twelve (*dvādaśānta*).[65] (87ab)

If he is in a state of union (*yukta*) within the Void, (then his) creation (*kṛtya*) is withdrawn.[66] Above that he is said to be all-pervasive and, devoid (of phenomenal) qualities (*nirguṇa*), is endowed with (all the divine) qualities (*guṇa*). (87cd-88ab)

Devoid of (conditioned) consciousness, he possesses (universal) consciousness. Transcending the qualities, he is stainless (*nirañjana*).[67] (He is) endless, eternal, subtle,[68] beyond thought and supreme. (88cd-89ab)

(For him there is) neither merit (*puṇya*) nor demerit (*apuṇya*) and he is said to be one who makes all (beings) blissful. (Even as he) resides in the ocean of transmigratory existence, he is himself the creator and the destroyer (of all things).[69] (89cd-90ab)

The Self is bound repeatedly by the Self and the Self is liberated by the Self.[70] By means of this sequential Yoga (*kramayoga*), (the liberated one) is the Drop of Union (*yogabindu*).[71] One should know (the reality) established in the Drop in (the most essential and) succinct way and one should practice constantly. (90cd-91)

Establishment in Sound and the Rise of Kuṇḍalinī

Next I will tell (you) about (the reality) within Sound (*nādastha*).[72] Now listen. (92ab)

One should know the Kuṇḍalinī of Sound (*nāda*) located in the middle of the navel. Having abandoned the Five Causes, (Kuṇḍalinī) exits (from the body) by means of the Cavity of Brahmā. Having pierced through (the series of Causes) from Brahmā to Śiva it goes to the upper state (*ūrdhvagati*)[73] having grasped the Point of the Mind (*manobindu*) and broken through the Five Voids.[74] (92cd-94ab)

(Kuṇḍalinī in this state) is brilliant like the beautiful autumn moon and burns radiantly like ten million lightning flashes. She shines (beautifully like) the rays of the risen sun and is (tender and fine) like the sprout of a new leaf. (94cd-95ab)

Her form is (subtle) like a woolen fibre and emerges along the lotus fibre (that threads through Suṣumṇā).[75] She shines (like) the rays of a winter moon and is like the steady flame of a lamp. (95cd-96ab)

The Drop, whose form (*ākṛti*) is (like) a spark from a fire, is at the end (*agra*) of that. If, having grasped the Drop in this way, it is filled with the resonance (*dhvani)* (of consciousness), and having abandoned the Five Causes, the *bandha* of the conch (*śaṅkha*)[76] is established.[77] (96cd-97)

Then she moves (impelled) by emission (*visarga*) and is slowly dragged along.[78] It should be dragged (up) like (the cloud) in the sky (sucks up) water in a lotus fibe (*padmanāla*).[79] Its movement should be continuous like (that of) a flame in a (sheltered place where) there is no wind.[80] (98-99ab)

Then, O (god) with auspicious eyes, the two eyebrows are raised upwards.[81] Having cast (the Drop upwards), the two eyelids should be closed.[82]
(99cd-100ab)

One who ardently desires liberation should fashion the Trident within the Skyfarer (Khecara).[83] (Kuṇḍalinī) whose form is (subtle and white like) a snowflake should be conjoined to the extremity of Energy (*śaktyagre*).[84] (100cd-101ab)

One should then abandon the (five) causes by means of the flowing current of the Central Channel (*madhyanāḍī*). (One should) then abandon the (five) causes[85] by means of exhalations and inhalations, strengthened with breath retentions. (101cd-102ab)

If (by this method the yogi) becomes one with Energy (*śaktisama*), having abandoned the (five) Causes, he attains magical power (*siddhi*) and the eight yogic powers (*guṇa*) of making himself small at will and the rest. By the power of Rudra's energy, he certainly acquires the knowledge of (all things in the) past, present and future.[86] (102bcd-104ab)

Established in Energy[87]

(Thus), O god, the (reality) within Sound has been explained and (the reality) within the Drop, before that. Now listen to how (the state) Established in Energy is, that is, how (the energy of) Unstruck Sound (*avarṇā*) (abides) in the Ocean of the Yoni of Kula in union with (the energy of) Letter.[88] (104cd-105)

I have told you this before in (the scripture of) seventy million (verses). O god, (the Energy) in the form of Letter (*varṇa*) has been revealed and then again hidden.[89] Thus (mantras) are not successful even if they have been repeated (*japtvā*) a hundred million times. (106-107ab)

She, the imperishable energy (of Śiva) is the very life of mantras. O handsome one, devoid of her, they are fruitless (like) autumn clouds (that give no rain).[90] (107cd-108ab)

O god, she is the Mother (of the letters) (*mātṛkā*) endowed with both supreme (transcendence) and inferior (immanence).[91] The entire universe from Brahmā up to (this) world is pervaded by her. (108cd-109ab)

O god, if she is there, possessing both a supreme (transcendental) and inferior (immanent form), it is like the phonemic energy (*varṇa*) (of the letters) that is omnipresent in the world, present in the letter A (of Unstruck Sound) (*avarṇa*).[92] (109cd-110ab)

O Great Lord, I will tell (you) the final conclusion (the scriptures have reached concerning Her nature).[93] That subtle and supreme power is said to be beyond the bounds of scriptural injunction (*nirācārā*).[94] (110cd-111ab)

Wrapping herself around the Drop of the Heart she slumbers (there) in the form of a snake. There the great yogi (also) sleeps and, O Lord, he knows nothing at all.[95] (111cd-112ab)

She is supreme bliss and is awakened by the resonance (of consciousness).[96] Aroused by the Drop (of Śiva's seed), Kuṇḍalī (assumes the form of) a straight line.[97] (112cd-113ab)

She should be known to be Rekhinī (the Line) (who) is in (the middle of) the capsule of the two Drops. (In the next phase) she is said (to flow) in three channels and is called Raudrī. She is (also) called Nirodhinī[98] (the Obstructress) who blocks the path to liberation. (113cd-114)

Ambikā, who is the moonlight of the Centre, should be know to be the half digit (*kalā*) of the moon.[99] The Supreme Power who is only one becomes threefold. She is born as the nine classes (of letters) by the union and separation of these (her three aspects). (115-116ab)

(Thus Kuṇḍalinī), who is the garland of the letters of the nine classes, is threefold and ninefold. O god, she (then) assumes the form of the five mantras of Sadyojāta and the rest, in due order. One should know, O Lord of the gods, that she is then said to be fivefold. (116cd-117)

O god, (when) she is within the twelve vowels, she is said to be twelvefold. Divided by fifty, she is (all) the letters ranging from A to KṢa. (118)

In the heart centre she is a single atom (*ekāṇavā*). In the throat she should be know to be two atoms and three when she is in the root of the tongue. (119)

The letters, belonging to the nine classes, are formed at the tip of the tongue. Everybody's speech (*śabda*) originates and develops in this way.[100] (120)

Just as one (of them) is, so are all of these sixteen great flames (*mahānila*).[101] Fifty (come first). Then after that come nine. The fifty arise in this sequence. I have created them so that words may be articulated (*śabdaviśleṣaṇa*) for the daily commerce of life.[102] (121-122)

Without them the ninefold manifestation could never take place.[103] Therefore, O god, one should know that all this is born of the Divine Mother (*mātṛkā*).[104] (123)

There is no mantra higher than Mātṛkā, no state higher than the Transmental (*unmanī*). There is no god other than the teacher and no Gesture higher than Khecarī. There is no knowledge higher than Mātṛkā and no meditation (*dhyāna*) higher than Mātṛkā. (124-125ab)

All of this, divided into gross and subtle, is a product of Mātṛkā. Everything comes from that and everything dissolves away there itself.[105] (125cd-126ab)

O god, just as a drop comes into being and is destroyed in water, in the same way the elemental Self (*bhūtātman*) (comes into being) and dissolves away in the Drop of the Mind (*manobindu*). (126cd-127ab)

The Unfolding States and Powers of Raudrī, Jyeṣṭhā, Vāmā and Ambikā

Having abandoned Raudrī who is on the head (then comes) Jyeṣṭhā who is the weapon (*āyudha*).[106] O handsome one, Vāmā is Kuṇḍalinī and Ambikā is energy.[107] (127cd-128ab)

O Bhairava, he (who knows this) possesses power and is a (true) Kaula (*vīra*). He loves me and is, without a doubt, worshipped by the best of adepts.[108] (128cd-129ab)

O god, Brahmā is associated with Vāmā. Viṣṇu is said to be Jyeṣṭhā. O Great Lord, Rudra is with Raudrī and (the wise) know that Īśvara is Ambikā. (129cd-130ab)

The god Word is (formed) by (their) union. Śiva, who is Sound, is supreme.[109] (He who is) the Five Causes abides in this way in a pervasive state (*vyāpakatva*).[110] (130cd-131ab)

The dawn (*udaya*) is represented by Vāmā. Jyeṣṭhā is said to be at midday. (The third) juncture (*saṁdhyā*) should known to be Raudrī. Sunset (*astamana*) (takes place) within her.[111] (131cd-132ab)

It is said that exhalation is (brought about) by Vāmā. Inhalation is said (to be brought about) by Jyeṣṭhā. It is taught that the breath is retained by Raudrī. While Ambikā is established in one's own essential nature. (132cd-133ab)

Vāmā is said to be Iḍā, whereas Jyeṣṭhā is considered to be Piṅgalā. Again, Raudrī is within Suṣumṇā and is said to be located in the equinox (*viṣuva*). (133cd-134ab)

One should know Kuṇḍalī to be within emergence (*udbhava*). She is said to be Vāmā.[112] In the same way Jyeṣṭhā is in disjunction (*viśleṣa*). Raudrī is said to be in merger. O leader of the gods, one should know that Ambā is beyond merger. (134cd-135)

One should know that Kuṇḍalī is located in the navel. She sleeps and (her) form is that of a snake. Raudrī is above in the throat where Rudra is the lord of the universe. (136)

Present (between the eyebrows) within the capsule of the two Drops,[113] Jyeṣṭhikā is within the flux in the middle. Those who know (ultimate) reality should know that Ambikā is located in the Cavity of Brahmā (*brahmarandhra*).[114] (137)

One should know that Kuṇḍalī is located in the mind and is said to be the waking state. Raudrī is impelled by Jyeṣṭhā.[115] Raudrī brings about the transmental (*unmana*) state. (138)

O Mahādeva, she is called deep sleep and has dissolved away at the extremity of the Transmental.[116] Again, Ambikā is beyond mind. She is in the abode of the Fourth State.[117] (139)

Kuṇḍalī should be known to be the first[118] and Vāmā, the second.[119] O god, the third is Raudrikā.[120] The universe is differentiated (*kalita*) by (this) triple energy (*triśakti*). (140)

Emergence (*udbhava*), disjuction (*viśleṣa*) and merger (*laya*), which should be know to be the third.[121] The Supreme Energy, who unfolds the path to liberation, is beyond merger.[122] (141)

Having known that which is without cause or action, reason and reasoning or that which should be taken up or abandoned, the bondage of phenomenal existence ceases.[123] (142)

O dear one, just as a bird in the sky who sees (a piece of) meat quickly (lays hold of it and) drags (it towards himself with great force), in the same way, O handsome one, the best of yogis should drag the Drop of the Mind (along Suṣumṇā) by means of the penetration (*āveśa*) (of power). (143-144ab)

Just as Raudrī has dissolved away and is the extreme limit (*avadhi*) of the utterance (*uccāra*) (and upward movement of mantra), in this way, O handsome one, the Drop follows after (impelled) by the utterance (of mantra).[124]
(144cd-145ab)

Once one has formed the instrument (*karaṇa*) of the Void (*kha*) that is in the Void and conjoined the stable Void within the Abode of the Void (*khasthāna*), the Tortoise should be conjoined within the Auspicious (*maṅgala*) and with the two at the end of the vowels. It should be impelled by the upward moving (breath) (*udāna*). Then one reaches the entrance of the Void. (145cd-146)

The Auspicious is the Thread of the Tortoise that is purified in order to (attain) the supreme goal.[125] It should be purified by the path of the twice-born. (Then) it is certainly purified. (147)

By this same path, one should perceive possession (by the deity) (*grahaṇa*).[126] Know that trembling (*kampana*) (is a sign that Kuṇḍalinī) is in the navel. (The yogi) yawns through the path of the mouth, tears fall (from his eyes), (his) eyebrows move up and down (*bhrūbhaṇga*) and (his) mind is disturbed.[127]
(148-149ab)

(When the energy) is in the throat (centre) (the yogi's) body shakes and he lets out a (loud) sound again and again. (His) head shakes; (he) babbles and loudly and shouts `hūm!'[128] Know that the (yogi) who is established in Rudra's abode (*sthāna*) is intent on (this) practice (*niṣṭhā*).[129] (149cd-150)

Establishment in Non-being and One's Own Nature

Next I will explain (the condition called) 'established in non-being (*abhāvastha*)' [130] Listen to how that is. (151ab)

There is no blocking (of anything), no utterance (of mantra), no meditation or conjuction with (any) object of perception. Thus having known (the reality that is) 'established in the innate nature', he is free without a doubt. (151cd-152ab)

Discursively represented intention (*saṁkalpa*) is a great bond. It is the cause of cessation and origination.[131] Having abandoned that, the yogi is freed. When intent prevails, he is certainly not freed.[132] (152cd-153ab)

No mind, object of thought or thinker is perceived (in that state). O god, as long as one continues to formulate intentions (*saṁkalpate*), duality (*dvandva*)[133] prevails. (153cd-154ab)

(In that state there is) no Drop, no Sound, no Śakti nor Śiva.[134] This is the latent trace of ignorance (*avidyāvāsanā*), which is the bondage of transmigratory existence.[135] (154cd-155ab)

There is no intention (*saṁkalpa*) in (the one) formless (reality). What can (any so-called) saviour do?[136] Once that has been abandoned, all has been abandoned, (including) all the fetters of (vain) hope (for worldly things). (155cd-156ab)

Hope is the great fetter. The entire universe is bound by that.[137] As long as that is not abandoned, where is liberation?[138] (156cd-157ab)

Where everything has dissolved away there is no bondage for those who believe in liberation (*mokṣavādin*).[139] He who has no desire even for liberation attains it. No level of existence (*sthāna*) is conceived in the liberated state, nor (is there) meditation or concentration (*dhāraṇā*).[140] (157cd-158)

(The yogi's) vision (*dṛṣṭi*), which bears the mark of all-pervasive (consciousness), is extensive everywhere.[141] (159ab)

How can the Signless (*alakṣa*) have a sign? How can there be mind in that which is No Mind (*amanaska*). (159cd)

Thus the wise should think: how can No Mind have a place (*sthāna*)? One should make the mind (abide) in Non-being (*nāstitva*) and abandon existence.[142] (160)

If one ascends to the condition of Non-being, then one realises that it exists. (Thus), having abandoned the level of (both) being and non-being, one should realise that everything is emptiness (*śūnya*).[143] (161)

Insight into the moving and immobile Self depends on the activity (*vṛtti*) of the mind.[144] Once one has know (the one reality which is both) with parts (*sakala*) and without (*niṣkala*), then one is freed from bondage.[145] (162)

To the degree in which one contemplates cognitive consciousness (*jñāna*) (all that remains is) the foundation of consciousness (underlying perception).[146] (In that state, the yogi is) rendered independent by (the activity of) the breath and, free of mental perceptions (*manobodha*) and the afflictions of breath control and the like, he should abandon the (last) trace of ignorance. (163-164ab)

Whatever has been done at any other time, it is placed in the formless (reality). Therefore, having understood in this way that the moving and immobile (world) is emptiness, (the yogi) pervades each individual thing, as does the unbroken space of a broken jar.[147] (164cd-165)

The entire universe is established in the liberated state. Delusion is the cause of bondage. If delusion is quelled, then the naturally liberated condition remains.[148] (166)

This is the (fortieth) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description *concerning the Venerable Knowledge*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Pure Six Thousand (verses) *(vimalaṣaṭka)* in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-ONE

The Competence to Practice Yoga

Apophansis, Detachment from the Opposites and the Realisation of Non-duality

Śrīnātha said:

O dear one, a great and sacred curiosity has arisen within me. What mark (*lakṣa*) can there be of the non-existant? How can there be contemplation (*bhāvanā*) of that which has no mark? (1)

Contemplation (*bhāvanā*) gives rise to duality. The (supreme) flawless (reality) is devoid of (phenomenal) being (*bhāva*). There are many forms of contemplation including, visualization (*dhyāna*), the rite of adoration (*pūjā*), the repetition of mantra and Yoga. O goddess, O Supreme Goddess, why have you spoken about that? (2-3ab)

The venerable (goddess) Vakrā said:

The letters (*varṇa*) are of many forms and the (forms of) meditation on (inner) objects (*lakṣa*) is of many kinds. I have revealed them in order to calm (*prasādana*) the mind. The mind is always fickle (*cañcala*), negligent, powerful and firm.[1] Its activity greater (even) than the wind, how can it be controlled? (3cd-5ab)

As long as one perceives one (thing), another will be present. (In the supreme state, there is) no meditation, no mark or intentional thought (*saṁkalpa*) ever. It is for this very reason that everything, without exception, should be abandoned. (5cd-6)

Just as someone who holds a torch abandons it once he has seen the (precious) substance (he is looking for), (similarly) having perceived the object of knowledge by means of knowledge, one should then abandon knowledge. (7)

O god, everything is (eventually) destroyed (whether it is) a mental object of concentration (*manobhavalakṣa*) or visualization, which is imagination (*kalpanā*). (Thus) one should reflect that: `I am not'[2] and, intent on non-dual action (that): `I am not, nor is there anything else.' (Such a one) does not think: `I am liberated'. Nor is he ever bound. (8-9)

One should abandon the (last) trace of ignorance (that induces one to think): `I am observing the vow (of a renouncer)', or `(I am) a householder'. Nor should one think: `I am a Brahmin' or `(I belong) to the lowest caste', (or even) `(I am) the deity'. (10)

The mark of one who is well merged (in the supreme reality) is not that (he is) a youth, an old man or a child. He does not think: `I am in heaven', or `(I am) in hell' (or 'I am in) the middle region'. (11)

The mark of one who is well merged (in the supreme reality) (is the realisation that): `I am not, nor does (any of) this exist'. He is neither a yogi (lit. `one who is connected') nor is he disconnected (from Yoga) (*viyogin*). He wishes for nothing (he does not have) and is detached (from what he possesses). (12)

The mark of one who is well merged (in the supreme reality) is that he is omniscient and egoless. One who is omniscient thinks: `I am not. (I am) not a fool nor (am I a great) scholar'. (13)

Until he does not abandon[3] (everything) in this way, he has nothing. The feeling that `I am' is always bound within the three qualities. (14)

O god, as long as he does not abandon (the ego) he will (always) be bound.[4] He for whom pleasure and pain, friend and foe, auspicious and inauspicious are equal is certainly free from the bondage of rebirth. (15-16ab)

Just as a calf leaves (its) mother when (her) milk finishes, similarly when the mind ceases, men attain *Nirvāṇa,* the supreme abode. (16cd-17ab)

All this universe is attached to sons, wives and family. *Nirvāṇa* (the liberated state) begins when, having abandoned those (things), (one is) is free of the (influence of the) qualities (of Nature). Those who have reached even the extreme limit of fettered existence (and are about to go beyond it) but are (still) consumed by craving and ego fall (back) into the ocean of fettered existence.[5] Having abandoned the ego (*ahaṁkāra*), one should give up the sense that `(this is) mine' (*mamatva*). (17cd-19)

Having abandoned all the bonds of longing (*āśā*) without exception, one should practice Yoga.[6] Even if he is a Brahmin who knows the four Vedas, one who is responsible for an abortion or has had sex with his teacher's wife is not freed from his sins unless he practices Yoga. (20-21ab)

The liberated soul sees everything (and realises that): `there is only the Self everywhere. Everything is as I am'. He sees (in this way that everything) is one.[7]

This one (reality) is in many states, (like) the countless thousands of woolen fibres (that are woven together in a blanket). (21cd-22)

He who is the same in both honour and blame and for friend and foe alike, is certainly liberated and liberates everybody.[8] (23)

One who is free of thought constructs, is undefineable, beyond mind and supreme, established in his own nature (*svarūpa*), is liberated without a doubt.[9] (24)

The inner Self of one who is established in the fundamental condition (*gati*) of his own essential nature is within the Lord.[10] It is said that he is free of thought (*kalpanā*) and contemplation (*bhāvanā*). One should know him to be like the Golden Womb by virtue of which this universe has been spread out (*vitata*). (25-26ab)

The Yoga of Tranquility

Śrīnātha said:

Within the (one) non-dual (reality), which is free of all the opposites and distinguishing marks (*liṅga*), there is no second (reality). (So) how does the Immobile One abide (within it)? (26cd-27ab)

The venerable (goddess) Vakrā said:

O god, without association with the mobile and the immobile there (could be) no mobile and immobile (universe).[11] Insight into the mobile and immobile Self depends on the activity (*vṛtti*) of the mind. Yogis worship that by which all this (universe) is impelled.[12] (27cd-28)

O god, it is said that, for embodied beings, the five subtle elements of sound, touch, taste, form and smell are very powerful bonds (*saṁga*).[13] (29)

Even those who are devoted to the Yoga of Tranquillity are troubled by the defect of associating (with them). Desire arises due to (this) association and from desire comes clinging. (30)

From clinging comes (the world of) thought and so one should abandon association (with their) company. Worldly life and reflection on (the meaning of) the scripture (to remedy the consequent suffering), is due to (this) bad company. (But), by abandoning the company of all (people and things), one reaches the highest state.[14] (31-32ab)

Grasping Kuṇḍalinī, the Wheels of the Letters, Merger in the Transmental and Pervasion

Śrīnātha said:

O goddess, I have understood all that you have said concerning the (condition of one who is) established in the Drop, in Sound, in Energy and in the Heart, (as well as) the one who is established in Energy and within the Heart and, in particular the one who is established in the innate nature (*svarūpastha*).[15] Now (tell me), what is (the condition of the reality) established in the letters and the teaching (concerning it)? (32cd-34ab)

The venerable (goddess) Vakrā said:

O long eyed one, I will tell (you the condition of the reality) established in the letters.[16] (34cd)

As (I) have told you before, (Kuṇḍalinī) is grasped (*grahaṇa*) in the navel centre.[17] Again, O god, union (*yoga*) (takes place) there and merger (*laya*) (takes place in the supreme reality that is) free of defects. (35)

O Lord of the gods, once known in this way, conjoin (Kuṇḍalinī) in the supreme state. The Principle of the Self (*ātmatattva*) is within the heart, the Principle of Knowledge (*vidyātattva*) is (within) the uvula. The Śiva Principle is in the Aperture of Brahmā, that is, in the locus of merger. (36-37ab)

The (condition of the reality) established in Energy on the (Cosmic) Path (*adhvan*) was explained previously. Now I will tell you about (the condition of one who is) established in the Lord of the Worlds (*bhuvanīśastha*). (37cd-38ab)

O beloved, each letter is established in Energy and is in the garland of Wheels. (Thus) the accomplishment (*siddhi*) of mantra of those who seek to conquer (bondage) is quickly (effected).[18] (38cd-39ab)

The Wheels are said to be the series (of deities associated with the letters) beginning with Śrīkaṇṭha and ending with Saṁvarta and Ananta.[19] They are said to be fifty within the sequence[20] and the entire universe is pervaded by them. O three eyed one, one should know that all of these are within (the very) centre of (Śiva's) Energy. No mantra that accomplishes (one's) visible or invisible goals is devoid of these (fifty). (39cd-41ab)

Each letter is uttered along with the twelve vowels conjoined with Fire and Wind and marked with the energy of Sound and the Drop. Then one should meditate on (the Principles of) the Self, Energy and Śiva, whose form is radiant energy (*tejas*), there (in their respective places). (41cd-42)

All this is in a state of vibrant union (*lolībhūta*). Merge it into the locus (*sthāna*) of Energy. If (this aggregate of Principles) brilliant with radiant rays, burning brightly like ten million lightning flashes,[21] merges with that, then (the yogi attains) the knowledge of time (*kālajñāna*). (43-44ab)

(Thus) he sees the state of Śiva's abode with (his) divine eye. Within (that) state he sees the perpetually active (*sadodita*) aggregate of Principles and, by the power of the Wheel, he sees everything established within (that). After six months, he flies up with great speed. This is true and there is no doubt about it.[22] (44cd-46ab)

More secret than secret, it should all be kept hidden with effort. It should not be given to one who is not (one's own initiated) disciple and never to one who is not (one's own spiritual) son. (46cd-47ab)

One should not give this jewel and the treasury of wisdom, the Kula scripture (*kulāgama*),[23] to those who are devoted to other scriptures, to those who observe deceitful vows, to those devoted to other deities, never to those who are dishonest, to those devoted to cheating and deviousness or to those who criticize the practice of non-duality (*advaitācāra*). O you who are worshipped by the gods, the Yoginīs are angry and dry up the flesh and fat (of the teacher who) gives the teaching to (people like) them, (even if he does so) by mistake. (49cd-50ab)

(The teaching should only be given to) those who are good devotees of the teacher and the deity, to those who are intent on the sacrifice *(agnikārya)* and the vow of purity and are devoted to the virgins (*kumārī*) and yogis. He should test (them) at the time of (their) initiation by means of (the appearance or otherwise of) the signs of attainment (*pratyaya*) such as the paralysis of (their) fetters (*pāśastobha*) and the rest.[24] (50cd-51)

(The teacher) should conjoin the adept to No Mind (*amanaska*) within which that energy, Mind Beyond Mind (*manonmanā*), is merged,[25] once he has led (him there) by means of the Thread of Power (*śaktisūtra*).[26] (52)

In this way, (the bonds are) quickly paralysed and (he makes) many kinds of ritual gestures (*mudrā*). If (his bonds) have been paralysed, he quotes from (many) scriptures by virtue of (his spiritual) power.[27] (53)

(If) asked, he will tell (you) the past and the future. He leaps up from the ground and falls (back) onto it and he is repeatedly possessed (*āveśa)* (by the deity).[28] (54)

Thus, O god, it has been told to you. (Now) listen to how (it is) divided. The Twelve-spoked (Wheel) is said to be (all the vowels) except the group of neuters (Ṛ Ṝ ḷ Ḷ). Conjoined with the thirty-two (consonant) letters, it is called the Great Wheel (*mahācakra*). In this way, all the Mātṛkās form a part of the teaching (*āmnāya*) concerning the Wheels.[29] (55-56)

Born in the Western House, (Kuṇḍalinī) is both inside and outside.[30] The sixteen spoked (Wheel) is located in the palate where (Kuṇḍalinī) generates nectar. (57)

O god, if he is established in Emission (*visarga*), he hears to a great distance and feels a (cool) tactile sensation, like a spray of snow.[31] (58)

Satisfied by the Nectar (that drips from the) uvula, he speaks of all that speech expresses *(vāṇgmaya)*. He cheats death and (all) diseases are destroyed. (59)

One who is established in (Śiva's) energy does this and is freed from the objects of sense and (all) the rest (that is binding). (Again, he) acquires, without a doubt, the yogic power to make himself small at will and the rest. (60)

O handsome one, if this state of merger is made firm there (in that same place), he then flies up swiftly (from the ground). (This is) true, true without a doubt.[32] (61)

The (deity) with form (*sakala*) should be known to be located in the Cavity (of Brahmā). Beyond that is the pervasive (aspect of the deity). Just as the space within a jar appears to be divided, similarly the pervasive one appears to be divided up (*vicchinna*) by the body. (62-63ab)

O god, just as when a jar is broken (the space that was within it goes on being) space, similarly, the individual soul by virtue of the fact that (his experience of his essential) condition is both internal and external, is like space (*nabhas*).[33] (63cd-64ab)

Just as a lamp placed in a jar illumines (only) one place, similarly, the Self in the Liṅga is artificially formed by the activity of the mind. (64cd-65ab)

O god, just as when the jar is broken (the lamp) illumines everywhere, similarly, the Supreme Lord, free of the fetters, is (all) pervasive.[34] (65cd-66ab)

In this way, O one of good vows, by virtue of your devotion, Pervasion (*vyāpti*) has been explained. (66cd)

All the fifty are like (any) one of the Bhairavas in the Wheel, namely, conjoined with Fire and Wind and marked with the energy of Sound and the Drop. (67)

(One who knows this) is said to be the one who performs all action (*karman*) and, according (to his) power, is made equal (to the Lord). (68ab)

क्रमोदयो नामानन्द:[४०२] ।। ४१ ।।

This is the (forty-first) chapter which is the emergence of the transmission (*kramodaya*) with regards to a description of the *Competence to Practice Yoga*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses) (*vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-TWO

The *Sūtra* of the Sequence of Emanation.

The Third Root Sūtra

Śrīnātha said:

O Kaulinī, tell (me), as you know it in truth, about the descent (into this world) of the Root Energy that has entered the transmission (*krama*) in the root tradition (*anvaya*). (1)

The venerable (goddess) Vakrā said:

Now I will tell (you) the teaching concerning the tradition of the (goddess whose name begins with) the syllable `Ku' (*kukārā*). It is the Root *Sūtra* in the Kula Tradition and is the knowledge set in three and a half (verses). The one who knows the unfolding of the *Sūtra* of Action is capable of attracting (the entire) triple world (to himself).[1] (2)

The Energy called the Yoni (*bhaga*) moves along three paths, consists of three letters and three aspects. Located in the centre (of it), along with the Supreme Power (*parakalā*), is the venerable (seat called) Oḍḍiyāṇa that is beautifully luminous (*sudīpta*).

In the right hand corner is the venerable (seat) called Jālandhara. It is located in (the Supreme Reality) that has been made manifest. In the left (corner) is the venerable Pūrṇapīṭha that arouses fear in the fettered[2] and fills the universe (*pūrita*).[3] (3)

In the forepart of (the Yoni) is Kāmarūpa. Endowed with the energy of passion, it is the abode of all the accomplishments (*siddhi*). The entire troupe of yogis, adorned with the energy of Supreme Śiva, resides within the Triangle.

In the middle of the (Yoni) is the Divine Liṅga that generates supreme bliss and is the Drop whose form is the Void (of transcendence). It is eternal bliss and, by churning it from above, it is divided into six aspects.[4] (4)

Located on the forehead of the Command,[5] it is (the sacred seat called) Tisra which is the expanse of the Vidyā, the Reality of the Transmission (*kramārtha*) and eternal experience. In this way, everything is pervaded by the three divisions of Rudra's energy who is the mother of persistence and destruction.

(She is) the Goddess of the gods and is in the middle.[6] Free and the bestower of bliss, she is (both) Kula and Akula. Her Command is the Drop. She is awakened consciousness who removes the fear of the fettered and bestows accomplishment (*siddhi*).[7] (5abcd)

Very passionate, she is Nityaklinnā (Perpetually Wet with the nectar of immortality) and is well known as the energy of supreme bliss that is infused with joy (*mudita*) by the Yoni. I salute the venerable (goddess) called Kubjikā who generates desires there and whose most excellent body is aroused (with divine passion).[8] (5ef)

(Thus) the Root *Sūtra* in its threefold form has been revealed. (6ab)

The *Sūtra* of the Śrīkrama[9]

The main sacred seats are four and they (all) have trees that afford shade.[10] The Supreme Goddess who bestows both worldly experience and liberation, is called the Yoni (*bhaga*). (6cdef)

The Energy of the Triangle, endowed with Kula and Akula, transports (and sustains) the group of six.[11] The sacred seat of OṀ is in the centre. In front of that, endowed with the Energy of Passion (*madanakalā*), is Kāmarūpa.

The (sacred seat) called Jāla is on the right side, while (the sacred seat called) Full, which is the supreme nectar (of immortality), is in the left corner. On the left, mount Śrīśaila[12] is the abode of the joy of sex; while the (mount) Māhendra of worldly experience (*bhoga*) is on the right.[13] (7)

In front stands (mount) Kailāsa, full (of all things).[14] Along with the three worlds, it is the Kailāsa of Yoga. In the end of the left, endowed with the Pure (lunar) Energy (*vimalakalā*), is the other Pentad, while the four Siddhas are in front. The group of six yogis is in the hexagram. After that comes the group of six made of energies (*kalā*) within the six parts.[15] At the end of the right, there is another Pentad, while Olinātha, who resides within the Supreme Abode, is in the west.[16] (8)

There is One Flower (*ekapuṣpa*) at the beginning of that and the lower (immanent) Kula is at the end of Olinātha. These are the sacred seats and the goddesses of the sacred seats and the glorious power that is associated (with them). (This is) the triple triple division (*tritribheda*) in the three places.

After that it is surrounded by the eight Yoginīs and by the adepts along with the sons (on the eight petals of a lotus). Mother Oḍḍā is the Primordial Energy (*ādiśakti*), endowed with all the qualities. Within that, outside (the Triangle in the corners of the hexagram) come the groups of Six Faces and Six Limbs. (9)

After that, outside the Kula (of the *maṇḍala*), there are twenty-one *maṇḍalas.*[17] In the middle is the (Vidyā) who is the treasury of all qualities and the prescription (*vidhāna*) beginning with `Kā' concerning the *maṇḍalas.* There are sixty-four (Yoginīs) outside there and the supreme (Command) that has been spread out in (all) directions by applying the Weapon.

There are four pillars in the corners. The first group of four that has been accomplished is in the Kulas of the intermediate directions. One should fashion in this way the first *Sūtra* of the Śrīkrama which (describes the *maṇḍala*) endowed with the Kula and is the location of the sacrificial rite (*yajanakrama*).[18] (10)

O Śambhu, this is the *Sūtra* of Action (*kriyāsūtra*). It is recited in the course of the sixfold liturgy (*ṣaṭkrama*). Having worshipped in the prescribed way, the future world (*paratra*) is purified. (11)

As long as one does not know these two (*sūtras*) where can that (reality be realised)? There is no liberation in the Śrīkrama without compassion. (12)

The Sūtra of the Sequence of Emanation (*Sṛṣṭikramasūtra*)[19]

Kāmarūpa is in the Drop. After that comes the sacred seat Uḍḍiyāṇa, which is in the centre of the energy (*kalā*) of the Moon. The sacred seat Jālandhara is located at the End of Sound (*nādānta*). (Pūrṇagiri) the sacred seat of mantra within the Triangle is on the path below it.

The arising of the sacred seats takes place within the (Triangle) in the current of Kula (*kulaugha*). The mother of persistance and destruction[20] (resides there, while) the sign of (its) accomplishment is (experienced in the) forehead. I praise the divine Energy who is in the Supreme Abode and, in the company of the Siddhas, is called the Yoni (*bhaga*).[21] (13)

Again, I will recount the *sūtra*[22] concerning the sequence of emanation in accord with the teaching of the scripture. (14ab)

Oḍḍiyāna (*Kalā*)

[23]The form of Śakti comes first and its sphere is the manifestation of the Unmanifest. The Unmanifest is Bhairava who is the Self and is said to be the bliss of the Self. He arises in the middle of the Sky (of Ultimate Reality) within the Void (*gagana*) inside the Triangle. The form of the breath is that of a bird (that flies upward) and so is Odyāṇaka.[24] (14cd-16ab)

Kāmarūpa (*Bindu*)

The Drop falls in the front corner from the middle of the venerable Odyāna.[25] (The sacred seat) called Kāmarūpa, which is said to be the abode of all the Siddhas, arises there. (16cd-17ab)

Jālandhara (*Nādānta*)

Again, the radiant energy (*tejas*) that emerges out of the Drop has gone to the southern (corner) of the Yoni. (The sacred seat) called Jāla whose energy is extremely intense and hard to bear, arises there.[26] (17cd-18ab)

Pūrṇagiri (*Mantrapīṭha*)

Again, the light emitted by the radiant energy (emerges) in the left part, that is, the northern part of the Kula.[27] Thus it is called Pūrṇagiri. Such are the four sacred seats. (18cd)

(The teaching concerning the four seats) that has come down through the series (of teachers and disciples), has been imparted in accord with the path of emanation. (18cd-19)

The Secret Names of the Seats

Oḍḍiyāna

[28]I will (now) tell (you) their secret names according to the convention (*saṁketa*).[29] The bestower of the path to liberation, the Sacred Seat of Māyā[30] of the Yoga Tantra, is in the centre within the Yoni. It comes forth from the Unmanifest (*avyakta*).[31] (20-21ab)

Jālandhara

One should know that the Sacred Seat of Vidyā, which is within the Solar Principle, is in the south. It has emerged from the centre of Sound and bestows accomplishment in knowledge.[32] (21cd-22ab)

Pūrṇagiri

The Sacred Seat of Mantra is in the north, in the centre of the light of the Lunar Principle. It bestows accomplishment in knowledge and has emerged from the midst of the radiant energy (*tejas*) (of the deity). (22cd-23ab)

Kāmarūpa

In front of that is the Sacred Seat of Gesture.[33] One should know that to be the Principle of Brahmā that bestows the accomplishment of the body (of the energies of the letters) (*piṇḍasiddhi*) and has come forth from the body of the Drop. (23cd-24ab)

This is the secret convention and is said to be the first of the Transmission. It is called the `group of sacred seats' (*pīṭhāvalī*) and its mark is the sign (of the presence of) the Yoginīs (in each sacred seat). The initiate (*anvayin*) is a part of the tradition (*anvaya*) by the power of the convention. (24cd-25)

Thus the meaning of the *Sūtra* has (just) been indicated (*uḍḍiṣṭa*) (here and) expounded in full (*nirṇīta*) in the (scripture of) seventy million (verses).[34] (26ab)

The Language on the Path of Kula

Now, O god, I will tell (you) the Sequence of (the Secret) Code (*bhāṣākrama*) on the Kula path. (26cd)

The Group of Eight Codes

KULĀ,[35] KUŚĀ, KUVE, KUYĀ, KUBHU, KUKṢE, KUNI and KUMĀ – this is the vocabulary (*kośa*) of the convention, conceived on the path of (phenomenal) existence. Knowledge of the meaning of (the Kula) language is obtained from the teacher's mouth. (27-28ab)

(KULĀ) is said to be Kulāvalī (the Troupe of Kula) and KUŚĀ is Śākinī. (KUVE) is Veśyāvalī (the Troupe of Courtesans), while KUYĀ is Yākinī Bhairavī. KUBHU is Bhuktivatī (Endowed with Enjoyment), while the (goddess called) KUKṢE is Kṣemaṁkarī (the Forgiving). KUNI is the goddess Niṣkramaṇā (the Exit), while KUMĀ is Maṅgalā (the Auspicious). In this way, Kubjikā the one deity of the House (*gṛhadevatā*), is of eight kinds. (28cd-30)

Previously, in the eight houses of non-duality, she observed the conduct (of union with the god) (*caryā*). (These are): Prayāgā, Varuṇā, Kolā, Aṭṭahāsā, Jayantikā, Caritra, Ekāmraka and Devīkoṭṭa as the eighth. (31-32ab)

(This) is said to be the group of Eight Houses (*gṛhāṣṭaka*) that gives immediate realisation. They all possess the divine authority that bestows knowledge and worldly benefits. Veśyā (the Courtesan) and the other goddesses who are, in themselves, transcendental (*atītā*), (reside) in the Eight Houses.[36] (32cd-33)

(These goddesses are): Veśyā (the Courtesan), Śuṇḍinī (the Barmaid), Kaivartī (the fisherwoman), Khaṭṭikī (the Butcher Woman), Kañcukī (the Debauchee), Rajakī (the Washerwoman), Śilpī (the Sculpteress) and Kauśikī (the Female Owl), who is the eighth. These eight are said to be the generators of the Houses. (34-35ab)

Veśyā is in Prayāga, Śuṇḍinī is in Vārāṇasī, Kaivartī is in Kaullagiri, Khaṭṭikī is in Aṭṭahāsa, Kañcukī is said to be in Jayantī, Rajakī is in Caritra, Śilpikā is in Ekāmra and Kauśikī is in Devakoṭaka. In this way, the language is of eight kinds. And so too (the goddess) Kukārā is said to be of eight kinds. (35cd-37)

The Energy called Veśyā etc. is said to be of eight kinds, namely: Mantrajā (Born of mantra), Sahajā (Innately Born), Yogajā (Born of Yoga), Tantrajā (Born of Tantra), Kulajā (Born of Kula), Jñānajā (Born of Knowledge), Yonijā (Born of the Yoni) and Vyomajā (Born of the Sky). (38-39ab)

1) Mantrajā is said to contain (all the) energies (*sakalā*). 2) Sahajā is said to be terrible (*raudrikā*). 3) Yogajā is pervaded by action. 4) Tantrajā is (engaged) in the lower works (of magic). 5) Kulajā converses pleasingly and 6) Jñānajā desires the Rule. (39cd-40)

7) Yonijā deludes living beings while 8) Vyomajā certainly kills (one's enemy). They should be known to be in the eight fields in this way.[37] (The wise) know that (they are the same as) the group of eight (Mothers) beginning with Brahmāṇī. One should know these eight and worship them with effort. Then they should be known to be beneficial, (but if they are) disrespected, (they) kill (the offender). (41-42)

This is the divine group of eight of (the secret) language revealed in the Kula tradition. It should not be given to the disciple of another (teacher), (but) streneously protected (from the uninitiated). (43)

The Sixty-eight Codes

ĀKAHĀ, HĀKAHĀ, KUKAHĀ, ḌĀKAHĀ (Ḍākinī), RĀKAHĀ (Rākinī) LĀKAHĀ (Lākinī), KĀKAHĀ (Kākinī), SĀKAHĀ (Śākinī), HĀKAHĀ (Hākinī) and KUKAHĀ (Kubjikā) are accomplished in the four ages of the universe. (44-45ab)

The one who reveals knowledge is referred to with the word `KAHĀ'. I have spoken the language of Kula in the form of the knowledge of (ultimate) reality. That is the group of ten of (the secret) code that, conjoined with the reality (*artha*) (expressed by) `KAHĀ', was told to me.[38] (45cd-46)

O god, that Kula has been revealed by means of this language. He who does not know this language is not fit to be a member of the tradition (*anvaya*). (47)

KAI, KA, KHA, MĀ, Ā, GA and the six, JA, ĀDYĀ, KU, ŚA, DI and PI. This is the twelvefold code revealed by the Primordial Goddess (Ādidevī). (48)

This is the transmission of the language of Yoga (*yogabhāṣākrama*) that bestows the status of a teacher (*ācārya*) (to one who knows it). (49ab)

O Lord, (KAI is) Kailāsa. (Ka is) the Lotus. (KHA is) the Drop in the centre of the Sky (of Supreme Principle). (MĀ is) Mātaṇga, (Ā is) Kaula, (GA is) Nonduality. (JA is) the arising and falling away of the universe. (ĀDYĀ is) Śiva who is both the vowels (*ādi*) and the consonants (*kādi*) and, stamped with the seal of the Yākinī's Yoni, is accomplished. (KU is) the teaching (*darśana*) of the tradition of the (goddess) Kukārā (beginning with) the sacrifice and ending with the (teacher's) sandels. (ŚA is) Śavarī and (her) authority. (DI is) the wick of the lamp and Mālinī. (PI is) the sacred seats beginning with OṀ. (By knowing this) one achieves the plane of the Lord of Yoga. (49cd-52ab)

This is the twelvefold code taught in the scripture of the Śrīkula. He who knows the various codes (*bhāṣābheda*) is a (true) teacher (*ācārya*) in the Kula tradition. (52cd-53ab)

KHEKHA, KAUKHA, ŚIKĀ and KUṢĀ are the fourfold code. GAVI, SAGA and PAVI make three along with MĀVI and MĀMA as the fifth. ḌĀHO, GAME and LADHŪ make three. KĀHI, SĀHĀ, Khecari and Kākamātṛkā are said to be the division of seven hexads (that is, forty-two). (53cd-55ab)

O (Oḍḍiyāṇa), JĀ (Jālandhara), PŪ (Pūrṇagiri) and KĀ (Kāmarūpa) make the code of four. O (Oḍḍīśanātha), CA (Caryānātha) ṢA (Ṣaṣṭhanātha) and MI (Mitranātha) make a group of four. AVI, YAVI and YO make three. Along with MAVI and YAVI, the fifth. AKUSI, KU and AKU make three. KA, VI, MU and ṢA make a group of four, while Ā, SVĀ, MA, A, VI and Ā make the group of six.[39] I have thus uttered the secret code. (55cd-57ab)

These are the codes, sixty-eight (in number), that are recited in the tradition. He who knows (these) cunnundrums (*praśna*) in this way (truly) belongs to the Western House. This is the knowledge of the sequence of codes (*bhāṣākrama*), the meaning of which is most profound and extensive. (57cd-58)

O Mahādeva, how can one who does not know this be said to be a teacher (*deśika*)? (These are) the sixty-eight codes in the Kula tradition that should be applied individually on the Path of the Clan (*gotramārga*) in order to understand the path to liberation. (59ab-60ab)

The meeting of Siddhas and Yoginīs. The Language of Gestures

Now listen to how the union of the meeting (*melaka*) (between Siddhas and Yoginīs) takes place. (60cd)

(A Yoginī) who shows one finger is (in this way) saying welcome (*svāgata*) to (adepts) who recite mantras. With two (fingers she says that) he is very welcome (*susvāgata*). By pressing the thumb (with the finger she indicates) well-being (*kṣema*). If (she) gazes (up) at the sky, (she indicates that) he has come to the house of well-being. Gesture (*mudrā*) is in this way said to be of four kinds in the convention of the clan (*gotrasaṁketaka*). (61-62)

The gaze directed to the east is playful (*cañcalā*). The gaze directed to the south is wrathful (*bhīṣaṇā*) and one should know that the one directed to the north is also such. (The gaze directed upwards) to the sky is fixed (*niścalā*).[40a] The Gesture of the Eyes (*cakṣurmudrā*) is said to be of four kinds on the path of the sacred seats. (63-64ab)

The Triangle of Letters and their Projection into the Six Wheels

Brahmā's measure (*mātrā*) consists of the sixteen vowels and is on the top (of the Triangle). Similarly, O god, Viṣṇu's measure is associated with (the letters) from Ka to Ta and is on the left (of the Triangle). Again, Rudra's measure is on the right and is formed from the (letters) Tha to Sa.[40b] (64cd-65)

Thus the three lines (of the Triangle) are said to (make up) the collection of the letters of the alphabet. And the aggregate of letters by itself is called the Divine Deposition within the body.[41] (66)

(Now) I will tell (you) the extensive sense of the teaching concerning the Six Places (*sthānaṣaṭka*). (67ab)

The Pure (Wheel) (*viśuddha)* consists of sixteen (vowels) and the (Wheel of) Unstruck Sound (*anāhata*) of the twelve (consonants from Ka to Ṭha). The (Wheel of the City of) Jewels (*maṇipura*) consists of the ten (consonants from Ḍa to Pha) while the (Wheel of) the Self-supported (*svādhiṣṭhāana*) consists of the six (consonants from Ba to La). There are four divisions (Va to Sa) in the (Wheel of the) Foundation (*ādhāra*) and (the wise) know the two (Ha and KṢa) in (the Wheel of the) Command. The group of ten associated with the teacher's Command is the (very) essence of the ocean of transmigratory existence. (67cd-69ab)

The Transmissions

The (Transmission taught) in the Kṛta Age is that of the Skyfarer and the Lineage (*oli*) of the Self. The Transmission of the Aged (is taught) in the Tretā Age and has come down through the transmission of the Lineage of the Eldest (*Jyeṣṭha Oli*). One should know that the middle one (is revealed) in the Dvāpara Age while the Transmission of the Child is (revealed) in the Age of Strife. The Lineage of the Transmission (*kramānvaya*) is triple, namely, that of the Child, the Youth and the Aged. The fourth one (which is that of the Skyfarer) is subtle and pervasive. The one Transmission is (thus) of three kinds. (69cd-71)

Thus this verse, which is the essence of the goddess's Command, has been revealed. O god, those men who understand it, are certainly liberated. They are not stained by either auspicious or inauspicious (actions), (even) by (great) sins, including brahminicide. Those who understand the meaning of the verse will be pure. (72-73)

The Kulācārya

Without knowing the purport of the scripture, (one is induced into) error so how can one find peace in the Western (Tradition)? Thus one who understands the *Śrīmata* is like pure gold. By seeing or by touching, he destroys the sins of the fettered.[42] He is a Kulācārya, skilled in the knowledge of (how to) pierce (*vedha*) (the Wheels in the body). (74-75)

He possesses the (divine) Command and is firm in (his) the vow (to observe) the teaching (of the scripture). O god, beautiful is he in the Kula who explains the meaning of the *Śrīmata*. (76)

Having tested (a teacher) in the meaning of the doctrine (*matārtha*), the teacher who (is found to) speak falsely will go to hell together with (his) disciples. (77)

He who explains the meaning of the scripture incorrectly (*anyathā*) and not according to the truth but makes up the meaning by himself, will go to a terrible hell. He, by himself, destroys (all that is beneficial) and, the greatest of sinners, he certainly does not remove the fetters (of others). (78-79ab).

The knowledge of Bhairava, presided over by Bhairavī, dissolves away (the fetters of those in bondage). From Bhairavī one obtains worldly benefits (*bhukti*). Liberation comes from Bhairava. (79cd-80ab)

This is Bhairava's language (*bhāṣā*) and its meaning is profound and extremely pure. A continuous flow (*santāna*) of bliss comes forth perpetually from Bhairava. Those who observe the Great Vow and have been pierced by insight into that bliss of consciousness are certainly liberated in all the three times. (80cd-82ab)

This is the (forty-second) chapter called the emergence of the transmission (*kramodaya*) with regards to the description concerning *the Sūtra of the Sequence of Emanation*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Pure Six Thousand (verses *vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-THREE

The *Sūtra* of the Descent (of the Teachers) in the Four Ages

Śrīnātha said:

(O goddess) worshipped by Śaṅkara! There is a (teaching concerning the practice of) right (Kaula) conduct for Siddhas and Yoginīs in every Age. Tell me of (its) descent (into the world) in relation to each Age.[1] (1)

The venerable (goddess) said:

Well done, O greatly wise one! Ādinātha! Lord of the Universe! I will tell (you) what you have asked (me about) that is free of doubt. O god, I will tell (you) in brief about the descent (of the teaching) in the four Ages, namely, the transmission of the line (of teachers and disciples), as I have declared it in the past. (2-3)

The Descent of the Teacher in the First Age

The Siddha called Sādākhya has authority in the Kṛta Age. He came to the Mother's House (*avvāgṛha*) of the goddess of the bliss of the northern (seat) (*uttarānandadevī*). He had four (spiritual) sons who were leaders of the Kula. I will tell (you) the names of each one of them individually.[2] The first is Amara, the second, Ajara, Oṁkāra is the third and the fourth is Amṛtodbhava.[3] (4-6)

O Umāpati, listen (now) to the number of gods initiated by the immortal (Siddhas). Seven times seven hundred million gods were initiated one by one. They all attained (the liberation of mystical) flight (*khecaratva*) by the power of my Command. Thus, O god, (I have) told (you) the number of Siddhas in the Kṛta Age.[4] (7-8)

Thus the Divine Body (*divyakāya*), born from (the bliss) generated from the Nectar (of consciousness) (*amṛtodbhava*), is situated in the middle of the spinal cord (*kudaṇḍa*). Burning very brilliantly (*mahādīpta*), it bestows God's grace (*devānugrahakāraka*).[5] (9)

The Descent of the Teacher in the Second Age

O (Lord) worshipped by the gods, (now) I will tell (you about) the essence of the second Age as (I have) told (you about it) in the past in accord with the transmission of the sequence of (teachers).[6] (10)

The name of the Siddha who bestows boons (in the second Age) is Śaṅkara. He travelled on the southern path to the Hermitage of the House (of the goddess) (*gṛhāśrama*) to meet (the goddess) Maṅgalā. (11)

He had four (spiritual) sons who were luminaries of the Kula. O god, they (were) devoted to the practice of religion by means of mantra, Yoga and concentration. O handsome one, I will tell (you) their names, individually and correctly. (They are) Aruṇa, Varuṇa and Varada, who is the third. O observer of good vows, the fourth (is) called Saṁcara; (so) you have been told about (him also).[7] (12-14ab)

O Great Lord, listen to the number of the Siddhas well initiated by (these spiritual) sons. Nine time nine hundered million were initiated, one by one. (14cd-15ab)

The sacred seat is in the north in the centre of the Cave, along with Śiva (Śūlin). Its light is (like) that of heated gold and (its) form like the young risen sun. It graces the Siddhas when the second Age comes. (15cd-16)

The Descent of the Teacher in the Third Age

O god, out of affection for you, I will tell (you) the transmission of authority (*adhikārakrama*) in the Dvāpara Age. O beloved, listen attentively. (17)

Piṅgala came to the House of the goddess of the Western Tradition.[8] He had (spiritual) sons who all bestowed boons (on others). (They were) Vijaya, Vindhyanātha, Mārtaṇḍa and Meṣa. O handsome one, I will tell (you the names of) the others they initiated. (18-19)

The guardians of the quarters, the constellations *(nakṣatra),* the fixed (*dhruva*) circle of the constellations and others, one hundred and twenty million in number, (all) were initiated one by one.[9] (20)

(Thus the transmission of) the third (Age), which is divine and burns with (a brilliant) yellow colour,[10] has been described. O Supreme Lord, (this includes, by my) grace, the constellations and the guardians of the quarters. (21)

The Descent of the Teacher in the Fourth Age

O god, listen to the transmission of authority (*adhikārakrama*) in the fourth Age. O Śaṅkara, I will tell you who descended (into the world). The goddess who belongs to the previous tradition (*pūrvāmnāya*) is Avvā (the Mother), who is (one with) Bhairava (*bhairavarūpiṇī*). The Siddha called Śrīkaṇṭha[11] came to her House. (22-23)

O handsome one, listen to what else he really (*tattvena*) did. The Siddhas of the fourth Age, who were office bearers in the previous tradition (*pūrvāmnāya*) and were initiates who, proud of their might, knew the truth of the teaching (*siddhānta*) of the Veda were all initiated in the Western Tradition of Śrīkaṇṭha. (24-25)

(These were) Khagendra, Kūrma, Mīna and Macchendra, the fourth.[12] They each initiated sixteen Siddhas belonging to Western Tradition (*kādi*).[13] (26)

Thus I have told you everything as it is, Age by Age. Gods are initiated in the Kṛta Age, Siddhas in the same way in the Tretā Age, celestial musicians and the host in the Dvāpara Age and men in the Age of Strife. O god, countless numbers are initiated in the fourth great Age. (27-28)

The descent of Siddhas into the tradition (*artha*), each descending into a particular division, takes place when the last Age comes which, (black) in colour like a bumble bee, is the Age of Strife, very terrible and full of impurity. (They are): Oḍḍīśa, Tūṣṇīśa, Ciñcīśa and the fourth, called Sthānu.[14] (29-30)

(Thus everything) has been explained with regards to each position (of authority) in accord with each of the Ages. O Śambhu, (this is) the great and supreme secret that has been illumined by an intense Command. (31)

(This is) the descent (of the Siddhas in) the four Ages, the Divine Current (*divyaugha*) and the Circle of the Teachers (*gurumaṇḍala*). How can one who has not acquired it as it truly is be a member of the tradition? (32)

This is the (forty-third) chapter called the Description of *the Sūtra of the Descent (of the Teachers) in the Four Ages*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses) (*vimalaṣaṭka*) in the division beginning with `KĀ' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-FOUR

The Emanation of the Śrīkrama

The Arising of the Transmission (*kramodaya*) in Twenty-eight Parts

The venerable (goddess) Vakrā said:

Now I will talk about another (manner in which) the Krama arises (*kramodaya*) that is pure and hard to acquire. (1ab)

O god, the omnipresent Drop (of Śiva's consciousness) is the imperishable cause (of all things). His will is the energy that emerges from it. (This energy is the goddess who is) consciousness and the repository of Kula. Endowed with the attributes of that (Drop), she cannot be grasped. She is the (goddess) Parā whose (fundamental) quality is consciousness. (1cd-2)

She is Kuṇḍalī, the light of the (Supreme) Principle who manifests in the form of a straight line. Sixfold, she is (also) said to be Vāmā, Jyeṣṭhā and Raudrī. (3)

(This) imperishable Transmental (energy) called Peace (*śāntyākhyā*), (emerges) below by the constraint of Sound (*nādanirodha*) and, residing in the great sacred seat, brings Kula and Kaula down there (into the world).[1] (4)

The Four Sacred Seats

(This descent takes place in the following stages): Beyond Form (*Rūpātīta*), Form (*Rūpa*), Word (*Pada*) and Body (*Piṇḍa*), in due order. The Body is the energy Kuṇḍalinī. Word (*pada*) is said to be the Gander. Form is said to be the Drop and Beyond Form is the reality free of all defects (*anāmaya*). (5-6ab)

The four sacred seats have arisen there by the will of Kula. Beyond Form is Kāmākhya. Form is the great Pūrṇagiri. Word is said to be Jālandhara, while the Body is said to be Oḍḍa. The group of four, KĀ, PŪ, JĀ and O has come (into the world) through the root Kaula transmission.[2] (6cd-8ab)

Sādākhya is the great Siddha who resides on Sadāśiva's plane. He divides himself up into three parts. He is one alone, abiding threefold as Śiva, Śakti and the Self. O Lord, Aghora is supreme and (his) energy is called Ghorā, while Śrīkaṇṭha is the Self,[3] which is fourfold.[4] (8cd-10)

The (Siddha) called Mitra is the god who is Umā's husband. This is called pervasion. Oḍḍīśa is the Ball (*golaka*) (of the Drop). Ṣaṣṭha(nātha) is said to be Sound and Carya(nātha) is said to be bliss. (11-12ab)

The Body, Word, Form and Beyond Form as the fourth – (this) Kaula sequence has arisen from the divine transmission (*divyakrama*) as the current of emanation. (12cd-13ab)

That Energy who is supreme bliss abides in the form is emanation. She is the goddess who is Kula and is white, yellow, red and black. Coloured thus, She is the energy of the sacred seats (*pīṭhakā*) who arises in the form of the vowels (*svara*).[5] (13cd-14)

The letters A, I, O and E and the one called the syllable OṀ are her emanation. (They correspond), in due order, to the (gross elements of) Earth onwards as the four (sacred seats) O (Oḍḍiyāṇa), JĀ (Jālandhara), PŪ (Pūrṇagiri) and KĀ (Kāmarūpa). The fifth sacred seat, which is called Mātaṅga, is pervasive, supreme, subtle and unapproachable for those who have no teacher. (15-17ab)

(The four correspond to) the Ṛgveda, Yajurveda, Sāmaveda and Atharvaṇa. OṀ is said to be Sadāśiva and the letter E is called Mitra(nātha). The letter O is called Oḍḍīśa, while the letter I is said to be Ṣaṣṭha(nātha). Caryā(nātha) is called the letter A. (These are the teachers) who brought the Tradition of the Siddhas (*siddhāmnāya*) down (to earth).[6] (17cd-19ab)

Mitra is a Ṛgvedin, Uḍḍa is a Yajurvedin, Ṣaṣṭha(nātha) is a Sāmavedin, while Caryānātha is an Atharvan. O handsome one, the four sacred seats have arisen in a similar way. (19cd-20)

The letters are Ṛ, Ṝ, ḷ and Ḷ. Kāmarūpa is in the letter Ṛ. Pūrṇapīṭha is in the letter Ṝ. (The sacred seat) called Jāla is in the letter ḷ, while Uḍḍiyāṇa is in the letter Ḷ. (21-22ab)

The letters Ḷ and ḷ are generated in the letters Ṛ and Ṝ. The Lineage (*oli*) is said to be E and AU and is the Self. OṀ and the couple, Ma and Ṣa constitute (with the other letters) the Vidyā of Kubjikā. These are the eight Śāmbhava (letters). (22cd-23)

Sādākhya is called emission (*visarga*). Such is said to be the sequence of emanation (*sṛṣṭikrama*). They say that the four neuter (letters) are the first (*ādyā*) Yoginī of the sacred seats. (24)

The Five Goddesses[7]

(Now) I will tell (you about) the *Śrīmata* according to (its) division into (the goddesses) Vimalā and the others. 1) Vimalā is said (to reside) in the letter E and 2) Pulindikā in the letter O. (25)

3) Yogavimalā is in the letter I, while 4) Campakā is (associated) with the letter A. 5) Samayā, from which creation proceeds, is said to be in the letter OṀ. (26)

The Six Wheels and the Six Yoginīs

The letter E corresponds to the (centre of the) Foundation (*ādhāra*), while the letter O is in the Self-supported (*svādhiṣṭhāna*). The letter I is said to be the Jewel (i.e. *maṇipura),* while the Unstruck Sound (*anāhata*) in the Heart is in the letter A. (27)

The Perfectly Pure (*viśuddha*) is (associated) with the letter OṀ, while the Command (*ājñā*) is said to be Emission (*visarga*). This emanation is of six kinds and it takes place within the six (*cakras*) in the Sequence of Kula (*kulakrama*).[8] (28)

Kaulinī is actually one and (O, god) she is your emanation. She who is designated by the letter Ḍā (i.e. Ḍākinī) is located in the letter Va[9] along with the one called Rāki (i.e. Rākinī) who is in the letter Śa. (29)

One should know that Lākinī is in the letter Ṣa, while (the wise) know that Kākinī is in the letter Sa. Sākinī is said to be in the letter KṢa, while Hākinī is considered to be in the letter Ha. (30)

In the same way, Yāki (i.e. Yākinī) is born within emission (*visarga*) in the midst of the great troupe of (energies) commencing with Ḍā (i.e. Ḍākinī). (This) is said to be the group of Six Yoginīs (*yoginīṣaṭka*). It is divine and grants knowledge. (31)

The Five Jewels

The (Yoginī of this Jewel) is called Gaganā (Sky), (she) is in the letter Pa, while Svargasaṁbhavā (Born in Heaven) is in the letter Pha. The one called Pavanā (Pure) is in the letter Ba, while Martyasaṁbhavā (Born in (the world of) Mortals) is in the letter Bha. [10]Nāgaloka (the World of Serpents) is in the letter Ma. These are said to be the Five Jewels.[11] Śilā (the Stone), which is called the Peak (*śekhara*), is (likewise) established in the letter Ma. (32-33)

The one called Saṁgha is in the letter Na, while Kumāraka is in the letter Ka.[12] That is explained in the *Śrīmata* according to the sequence of the various letters (*varṇabhedakrama*). He who obtains the twenty-eight divisions is successful. (34-35ab)

The Eight Mothers and the Eightfold Goddess

Brāhmī is in the vowels, while Maheśvarī is in the gutturals. Kaumarī is located in the palatals and Vaiṣṇavī is said to reside in the cerebrals. Vārāhī is located in the dentals and Aindrāṇī is in the labials. Śuṣkā, who is said to be Mahārāvā (The Great Sound),[13] is in the semi-vowels and Mahālakṣmī resides in the sibilants. These are the eight Mothers. (35cd-37)

The venerable (goddess) Kujā is (thus) both one and eightfold. She is said to be the deity of the sacred seats. Emanation takes place in this way[14] from the Western (Tradition) (*paścimataḥ*) and is itself (the goddess) Saṁvartā who is Mālinī. (38)

She is the one womb (*yoni*) of the universe and from that proceeds creation which is of many kinds, including the mantras, all the deities and the innumerable Gestures and Vidyās. (39)

She is the womb of phenomenal existence and, called Parā (the Supreme), she is (herself) emanation and her nature is consciousness. O Kubjīśa, she is Kubjinī, the Mother, Mālinī in embodied form. (40)

The Sonic Body of the God[15]

O god, (his) head (is fashioned from) the vowels. (His) right arm is the gutturals. The palatals are the left arm, while the right shank (*jaṅgha*)[16] is born from the cerebrals. (41)

The left shank[17] is in the dentals, while the two (parts of) the diaphragm are said to be in the labials. O god, the back, heart, navel, thigh and hip are part of the labials.[18] (In this way) the body of the god shines with glory (*rājate*). (42-43ab)

Skin (Ya), blood (Ra), flesh (La), sinew (Va), the bones (Śa), marrow (Ṣa), semen (Sa), the vital breath (Ha) and anger (KṢa) are located between Ya and KṢa. In this way, Kujīśa's body has emerged from the tranquillity of (the goddess) Parā.[19] (43cd-44)

The Goddess – Womb of the Universe and the Letters

She is called the womb of the universe (*jagadyoni*). She is the Great Mother (*mahāmbikā*) and her form is emanation. She is the womb of all existing things and her nature is (every) letter (*varṇarūpā*). (45)

All the deities of the letters, the Heroes, Bhairavas, Rudras and Siddhas – these too have emerged in the form of letters.[20] (46)

She is the womb of (all the worlds) established (in all of them) from Kālāgni (the Fire of Time) to Śiva. Such is the sacred (*divya*) (reality), the greatly sacred (reality), beyond the sacred and profane.[21] (47)

Admonitions to Secrecy and to the Practice of Moral Discipline

In this way, it is the Tradition (*anvaya*), the reality (*tattva*) that unites (right) conduct (*ācāra*) with the field (of its application) (*gocara*). O Great Śambhu, I have told you a secret that is extremely hard to acquire. (48)

This divine and pure knowledge has been culled from (the scripture of) seventy million verses. O god, (all) those men who obtain it are certainly liberated. (49)

The initiation and teaching imparted without the Pure Division (*vimalabheda*) (of the *Manthānabhairavatantra*)[22] is not (a true) initiation or (a true) teaching. (That initition consists of just) fruitless offerings to the fire. (50)

She is known as Mātṛkā and is endowed with accomplished knowledge. O god, it should not be given to (just) anybody, especially to one devoid of devotion. (51)

It should be given to one who is devoted to the worship of the transmission (*kramapūjā*), tranquil and devoid of attachment and aversion. This should be given to those (who are like that). O god, it should never be given to others (who are not). (52)

The sinful, those who censor others, those who are cruel and those (full of) attachment and aversion are not fit (to be members) of the Kula and Kaula. These inferior men wander about (in the world frustrated). They do not reach the Supreme Place (*sthāna*). I have previously prohibited them (from achieving success). (53-54ab)

Just as a dog seen by (another) dog wakes up, such is fruitless action enveloped in the darkness of ignorance. Those people who are immersed in the world, the deep ocean of transmigratory existence, given to anger and greed are not freed, even though they have been initiated. (54cd-56ab)

Like a worm (who lives) in dung feeds on impure filth, similarly those who have fallen from (the teachings of the) Kula fall into the ocean of hell. (56cd-57ab)

Those who worship me (but) are fickle and are in the grips of the ego do not achieve success either here or in the next world. Those who belong to a lineage (*pāramparyakrama*) and are initiated into the teachings of the Siddhas and those, O Śambhu, who have been consecrated (as teachers), (but) have no moral discipline (*vinaya*) and are devoid of the teaching (*naya*) do not achieve success either in this world or the next. (57cd-59)

Everything is attained by moral discipline (*vinaya*) and so one must practice it. Those who are devoid of moral discipline, most sinful and proud in (this) world, have no knowledge and are not fit (to be members of) the Kula and Kaula. (60-61ab)

The success (*siddhi*) those who are satisfied with the nectar of moral discipline and are intent on tranquil practice (achieve), even though they may be illiterate, proud scholars do not have. O Lord God of the gods, I have told you this as it really is, namely, the dawn of knowledge and the Kaula essence of the Śaiva (teachings). (61cd-62)

Obeiscence to the First Lord – Ādinātha[23]

The part (of the teaching concerned with) direct insight (*jñānakhaṇḍa*) has been imparted. The enemy, which is the Age of Strife, has been killed and the heap of sins has been destroyed. Having laid hold of the (Supreme) Principle within the Yoni, (the yogi) traverses (the spheres of existence) night and day with great force (*vega*) by means of the syllable which is the conjunction (*sandhyā*) (between them).[24] That Sound is the consciousness (*citsvarūpa*) of the gods; worthy of praise, (all) constantly bow before it. (All) bow before the venerable and great Ādinātha (the First Teacher), who bestows both liberation and worldly enjoyment. (63)

In order to (gain) knowledge and achieve liberation, I salute the venerable Oḍīśanātha, the lotus made of the parts (*pāda*) (of mantras), free of impurity, the infallible and accomplished Word within the abode (of mantras) made manifest (in the world). Skilled at removing obstacles, he abides pure and uncreated, the treasure of (all) auspicious things. Divine and bliss (itself) attained by states of insight (*jñānabhāva*), he is (the source of) many and various fruits. (64)

(We) salute the great and venerable Tūṣṇinātha, the best of teachers, attained by playful states (of elevated consciousness) (*līlābhāva*). He who possesses the (one) endless (reality) and is neither far (because he is everywhere) nor (is there in him) time and moment, night or day. In waking, dreaming and deep sleep, he is intent on the mind of emptiness (*gaganamati*) and is devoted to the passion (*kāma*) of liberation. and the removal of the fear of phenomenal existence. The foundation of (the most) intense (power of the goddess's) Command that removes of the fear of phenomenal existence, his goal is the salvation of (all) living beings. (65)

May the Lord Caryānātha protect me. Deserving all peoples' praise, he is victorious. Both seen and unseen, * * * * (his) body is pure. He is lustrated with divine drinks (*divyapāna*)[25] of (the nectar) of the New Moon and the like, by those who have been perfected by the (goddess's) Command and remove the impurities of the Age of Strife. Afterwards (he assumes) a playful form and, intent on the practice of equality, he is born (into the world) as a divine yogi. (66)

(He who) has revealed the Path of the Siddhas in the world and is famous in Kollāpura where, having burst apart the Bilva tree (*bilvasphoṭ*a), he then returned and resides in the City of the Moon. (I salute him) who, having seen the (goddess's) Tamarind Tree (*ciñcā*), known (throughout) the three worlds, attained fame. (67)

This is the (forty-fourth) chapter called concerning *the Emanation of the Śrīkrama.* It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Pure Six Thousand (verses) (*vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-FIVE

The Casket of the Transmissions

The Sūtra concerning the First Descent of the Tradition (*ādyāvatārasūtra*)

The venerable (goddess) Vakrā said:

Now, from here onwards, I will tell (you) the teaching concerning the Triple Division (*trikabheda*) * * * * Most excellent (*anuttama*), it is both superior (transcendent) and inferior (immanent). (1)

Supreme, it is established in the seed-syllable, (while) the Supreme Abode is seedless. The supreme knowledge is non-dual, transcends mantra and is not in the field (of the senses and the mind). (2)

Such is the threefold division * * * *. Having observed the great Kaula practice (*mahācaryā*), a sign of attainment (*pratyaya*) manifests. (3)

From the sign of attainment comes liberation of which there is no bondage. Thus the Sequence of Emanation (*sṛṣṭikrama*), which is the teaching of the Triple Division, has been explained. (4)

O Supreme Lord, it originated in the Western (Tradition) from the transmission of the Divine Tradition (*divyāmnāya*). The convention concerning the first descent (of the Tradition into the world), which is the arising of the Kulakrama, has been explained. (5)

The noble soul, who listens carefully to the great teaching (*mahāmata*) (concerning the goddess) called Śrīkujā is liberated and is a (true) Kulācārya, joyful with supreme bliss. (6)

Such is the nature of (Śiva's) energy. (Now) I will explain (the nature of the) Unmanifest (*avyakta*). (Bhairava) the Lion is born from the Unmanifest and from the Lion the amorous sport (*vibhrama*) of Saṁvartā (the goddess). (7)

Energy is generated from (this) activity, and from (this) energy, Kiñjalka Bhairava. Akula is born from Bhairava and Vikula from Akula. (8)

Puṁkula (comes) from Vikula and Khakula comes from Puṁkula. The fivefold Self comes from Khakula and the Kula Lineage (*santati*) comes from Akula.[1] (9)

O greatly austere one, (all these things) will certainly take place at the end of the Age of Strife. This is the divine knowledge of the Siddhas called the Kula teaching (*āmnāya*). (10)

He who knows (this), the first descent (of the teachings into the world), is a (true) member of the lineage of the Kula teachings. This sequence of emanation (*sṛṣṭikrama*) is knowledge, the teaching of the lineage of Siddhas (*siddhasantati*). (11)

O Supreme Lord, I have not told this to anyone except you. It should be guarded with effort and not made public. (12)

This is the *Sūtra* concerning the first descent (*ādyāvatārasūtra*), the teaching of the line of teachers. O fair-hipped one, he who knows it possesses the Command in the group of four (sacred seats). (13)

The Path of Flight and the Sixfold Kula Taught in the Language of the Kula

The first is the teaching (*āmnāya*) concerning Kula, the second is the teaching concerning the Krama, the third is the teaching concerning the Islands and the fourth is the teaching concerning the sacred seats. The teaching concerning the Siddhas is the fifth and the teaching concerning the Goddess is the sixth. This is the group of six teachings (*āmnāya*) well know in the tradition (*anvaya*). (14-15)

The teaching concerning Kula (*kulāmnāya*)

The first is the (Drop which is the) Divine Flower, the following one is called the Couple (Śrīnātha and Ciñcinī). This secret is only one, namely, the pentad of the Convention of the Flower. This group of Five Flowers[2] has been revealed in the Kula. (16-17ab)

The divine (transmission) of the Youth is above. He who bears it on (his) head should be known to be a (true) Kaula who explains the doctrine of the teachers (*ācārya*). He attains Flight and success lies in the palm of his hand.[3] (18)

This is the poet's mouth of the Flower (of the Divine Current), the teaching of the Western (Tradition). This divine emergence of Kula (*kulodaya*) has come down through the sequence of the lineage of teachers. (19)

He who recollects (the reality) within the Supreme Abode of the (transmission of the) Youth (from) the beginning to the end undoubtedly attains Flight and the accomplishment (*siddhi*) of Kula. (20)

O (goddess) venerated by the Heroes who wander in the Void! He surely attains Flight (*khegati*) and the (goddess) Khecarī, along with the bliss that is his authority.[4] (21)

The Accomplishment of Flight (*khecarīsiddhi*) (is the attainment of) the movement within the Void (*khecara*) that occurs by the movement of (the accomplished yogi) who moves in the Void (of absolute reality) (*khecara*). Khecarī is the accomplishment (*siddhi*) of the one who has achieved the Accomplishment of Flight (*khecarīsiddhi*). (22)

This is your Path of Flight. It is, without a doubt, the Divine Command. This is the Kula teaching, said to be the language of Kula (*kulabhāṣā).* (23)

The Krama (*kramāmnāya*) of Twenty-Seven of the Youth

Now (I will tell you about) the Krama variety within the Kula teaching (*kulāmnāya*). (This is) the group of four, namely, O (Oḍḍiyāṇa), JĀ (Jālandhara), PŪ (Pūrṇagiri) and KĀ (Kāmarūpa). It is adorned by the four goddesses along with the group of four Vidyās and is one with the Void (*khasamatā*). (There are also) four (Siddhas): MI (Mitranātha), O (Oḍḍīśanātha), ṢA (Ṣaṣṭhanātha) and CA (Caryānātha), each one of whom possesses all the Vidyās. (24-25)

The Jewel (Kuṇḍalinī) is within GA SA PA MA NA. (`Jewel') denotes the (Vidyā called) the Pentad of Jewels. It is generated from (Kuṇḍalinī who is) the Jewel and endowed with the pentad called VI, NI, VI, VI, SA. (26)

The group of six (is formed by) the Yoginīs, Ḍākinī (*ḍakārā*) and the rest and is associated with the seventh (Yoginī).[5] The Vidyā that operates as Aparā (?) is present in the seven aggregates. (27)

The group of five, conjoined with the Vidyā, is in the midst of (the Vidyā) A SAṀ YO VI SA. (The other mantras are) the triple pair, the three Peak (seed-syllables) and the (group) called the Consecrated Triad (*asiktatrika*). (28)

O god, this is the language of the transmission (*kramabhāṣā*). If one contemplates the twenty-seven divisions[6] in accord with the path of Yoga they are successful in (all) four ages. (29)

O god, this transmission (*krama*) has been energized in this way by Yugmanātha (the Lord of the Couple). The language is the Vidyā of one syllable that was explained before.[7] (30)

1) One's own teacher, 2) the garland of (metaphysical) Principles, 3) the sequence of fifty (letters) (*pañcāśikākrama*), 4) the Samayā, which is the Mālinī Vidya, 5) the group of eight Bhairavas, 6) the (Eight Mothers of the) Octad of Kula along with the divine (group of) sixty-four (*aṣṭāṣṭaka*) (Yoginīs). Thus the liturgy of the rite of adoration (*pūjākrama*) of the (Transmission of the) Youth in each Age has been declared. (31-32)

This is the divine Kulakrama in the Tradition, that is, in the Western Tradition. (It proceeded) from the south (of India) ten thousand one hundred years ago and then all that has been said by Siddhanātha was (uttered) in fornt of Dakṣa. O god, this, the most excellent current of the transmission (*kramaugha*), should not be written in a book. (33-34)

One should known that the transmission (*krama*), the pure meaning of the teaching (*matārtha*), is transmitted verbally. By worshipping (it), one attains liberation within seven lifetimes. (35)

This Krama teaching (*āmnāya*) of twenty-seven (constituents) is, by virtue of the Command of Kula, divine. He who acquires it in this way is a (true) Kaula. (36)

He is freed from all sins and, having entered the divine Western House on the top of Kailāsa, he can wander about as he pleases. Free of birth and death, he is equal (to the supreme) Siddha. He who has worshipped the Tradition (*āmnāya*) has cheated Yama (the Lord of Death). (37-38)

He (alone) should be known to be a follower of the Krama (*kramika*) in the Western House of the Yoginīs. He has authority in the Kulakaula and is said to be a (true) teacher. (39)

He who acquires the varieties of the Krama part by part in some different way is not freed from all (his) sins and does not come out of hell. He becomes increasingly poor and his lifespan is shortened. (40-41ab)

The greatest sinner in the Lineage of the Siddhas (*siddhasantāna*) is the one who explains the ritual (*kriyācāra*), the Circle of Gesture (*mudrāmaṇḍala*), the sacred seat, the sandals of the goddess and the ocean of terms (*saṁjñā*) and mantras in some other way (than this). (41cd-42)

O god, this is the divine transmission (*divyakrama*) that bestows both worldly benefits and liberation. O god, I have told you that, namely, the teaching of the Transmission of the Youth. (43)

The *Pīṭhāmnāya* – the Transmission of the Child

Śrīnātha said:

That, indeed, is the Transmission of the Youth along with the Divine Language (*divyabhāṣā*). (Now) O Vakrikā, if you are pleased (with me), tell me in detail about the teaching (*anvaya*) concerning the sacred seats. Attainable (only) by knowledge, how, O benevolent one, can it be made clearly comprehensible (*sphuṭa*)*?* (44-45ab)

The venerable (goddess) Vakrā said:

Now (I will give you) another Krama teaching the sense of which is pure (*vimalārtha*),[8] namely, the four transmissions of the sacred seats and the rest along with the arising of the Transmission of the Child.[9] (45cd-46ab)

I have explained (the Transmission) of the Youth in conjunction with the Transmission of the Child. (Similarly), the Transmission of the Skyfarer[10] is (such) by conjunction with the Transmission of the Youth. By conjuction with the Transmission of the Skyfarer, the Transmission of the Aged becomes clearly evident. (46cd-47)

This secret convention, the Kaula Transmission, is of six kind's[11] namely: 1) the Transmission of the Teachers, 2) the Ninefold mantra (*navātman*) along with 3) the Wheel of Māyā, 4) the Transmission of the Group of Eight Goddesses, then follows 5) the Doctrine of the Sixty-four (*aṣṭāṣṭaka*) and, once one has know (these Transmissions) in this way in due order, 6) the Transmission of the Skyfarer (follows). (48-49)

The Transmission of Siddhas, Stillness (*nirācāra*), the Transmission of Mālinī,[12] the king (of all Transmissions), the Transmission of the Assembly of Sounds (*śabdarāśi*),[13] the Transmission of the Line of Heroes (*vīrāvalī*) and, along with the Transmission of the Line of Heroes, the teaching concerning the Transmission of the Mātṛkās along with the Transmission of the Yoginīs.[14] The Transmission of the Samayā (Vidyā),[15] the divine Transmission of the Garland of Jewels,[16] the teaching concerning the Transmission of the *maṇḍala*, the Transmission of the various Houses and, after this, the Divine Transmission, the Transmission of Meru that is beneficial (*śiva*) and, along with these, the arising of the Transmission of Twenty-seven Parts.[17] (One) certainly (achieves) liberation once one has known (all that has) originated from the Transmissions in this way. (50-53)

After this comes a higher Transmission (*kramottara*), which is the Mother's House of mantras. It consists of the Northern (*vāma*) and Southern (*dakṣiṇa*) Kaulika (Transmissions) along with (those of) the East (*pūrva*) and the West (*paścima*).[18] (There is also) the (hexagram consisting of the) group of six Yonis (*yoniṣaṭka*), the Triangle (*śṛngāṭa*) and Kuleśvara (who consists of the letters) ranging from A to KṢa. He who knows[19] this is Bhairava himself, directly apparent. (54-55)

The Kaula Teachings of Sadyojāta

In this way, the truth (*tattva*) has emerged from the teaching (*artha*) of the Krama, that is, from the (scripture of) seventy million (verses) (*koṭi*). This is the doctrine (*mata*). This is what is to be known.[20] This is the truth (*tattva*). This is the Ocean of Kula. One should worship with effort the Current of the Kula, the Current of the Krama and the most excellent Current of Knowledge. It must never be denigrated.[21] (56-57)

The Tradition of the Transmission (*kramāmnāya*), which is a part of the Kula teaching, the sixth (current) amongst the five currents of Śaiva (scriptures), has been explained. This is a synopsis of its essence (*sārasaṁgraha*). (58)

The finest part of the line (*santāna*) of Siddhas, it is proficient in the Command of insight (*pratyayājñā*). It is the knowledge that comes by the arising of the transmission called the great *Mata* of the venerable (goddess) Kubjeśī.[22] (59)

This Kaula (teaching) is that of Sadyojāta (Born in an Instant),[23] the immediate arising of the sequence of emanation. The `Immediate' (*sadyo*) is said to be the first (of all things) and it generates time (*asadyas*).[24] (60)

The Immediate brings about Flight. The Immediate is the Kaula teaching. The Immediate is said to be the pinnacle.[25] (61)

In truth it is the Western House of the Yoginīs, the best Kula Hermitage. The Immediate is said to be universal bliss. The Immediate is indeed (the scripture of) seventy million verses. (62)

The Immediate is this tradition (*saṁpradāya*). The Immediate is both grace and restraint. The Immediate is the transmission of the line of teachers, the teaching of the Śaiva (scripture). (63)

The Immediate (*sadyas*) is all things, the *Śrīmata* and the Western House. Those who are devoid of the Immediate and are devoid of the Western Tradition are not consecrated and cannot be teachers.[26] (64-65ab)

One who is not part of a Kula lineage has no authority in the Śaiva Āgamas. O god, those who are initiated by (such a one) are not liberated. (65cd-66ab)

O god, one should not clearly set down to writing this Krama teaching (*kramārtha*) that has come from (the teacher's) mouth. It is always in the teacher's mouth and it is obtained from the teacher's mouth. (66cd-67ab)

(Even) if a Kaula adept is conjoined in this way to the Immediate he is destroyed by the company of the fettered, (even) if he is Sadāśiva himself. One should not keep the company of the worldly. Bad company brings about one's destruction. (67cd-68)

Just as pure gold is destroyed by contact with lead (*nāga*), in the same way, one who is pure is destroyed by contact with the worldly. By keeping the company of the fettered liberation is not possible. (He who keeps it) is not liberated (even) by consecration. (69-70ab)

This is the (forty-fifth) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description concerning *the Casket of the Transmissions*. It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Pure Six Thousand (verses) (*vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-SIX

The Glory of Emission (*vikṣepādhikāramāhātmya*)

The Contents of the Five Sacred Seats

The Location of the Twenty-five Principles in the Five Sacred Seats

The venerable (goddess) Vakrā said:

Now I will explain something else, namely, the auspicious arising of the sacred seats which are the principles of existence (*tattvapīṭha*).[1] (1ab)

One should know that Earth is located in Kāmarūpa (*kāmākhya*). Fire (*tejas*) is in the southern sacred seat. Water is located in Pūrṇagiri, while Air is in (the sacred seat of) OṀ. Space is in all the sacred seats. (These) are said to be my gross elements belonging to the sacred seats (*pīṭhabhūta*).[2] (1cd-2)

Know that Sound is in (the sacred seat of) Udyāṇa, while Touch is in front of that. Taste (*rasa*) is on the path to the north of it and Form is in the southern corner. The subtle element of Smell is within Kailāsa,[3] thus (completing) the group of five (subtle elements). (3-4ab)

Speech is located in space.[4] O Śiva, the hand is always (located) in (Kāmarūpa, the seat) in front. The feet are in the southern sacred seat, while the anus is in the northern corner and the genitals are in the middle of (these) three. These are my five organs of action. (4cd-5)

The ear is in the sacred seat of Jālandhara, while the skin is said to be in (the sacred seat of) Pūrṇagiri.[5] The eye is in the centre, while one should know that the tongue is in the circle of Kāmarūpa (*kāmākhya*) and the nose is in the sacred seat (called) Tisra. Such are the organs of knowledge. (6-7ab)

The mind (*manas*) is said to be in Kāmarūpa (*kāmākhya*) and the intellect is in the circle of Uḍyāna. The ego is in the south. (The wise) know that Nature (*prakṛti*) is in the western (seat) and the Person (*puruṣa*) is in the sacred seat in the centre. These five are the ornaments of Kula. (7cd-8)

The twenty-five Principles are said to be in the sacred seat of Yoga (*yogapīṭha*). One should make an effort to know them along with the three qualities (of Nature) (*guṇa*).[6] (9)

Know that *sattva* is in front and that *rajas* is in the circle of the north. Again, *tamas* is on the southern path. Now listen to the (location of) the Five Jewels.[7] (10)

The Location of the Five Brahmās in the Five Sacred Seats

Brahmā resides in Kāmarūpa while Viṣṇu is in the northern seat. Rudra is in the one called Jālākhya, while Īśvara is in the sacred seat (called) Tisra. Sadāśiva is in the centre between these two.[8] These five bring about emanation. (11-12ab)

I will (now) tell (you) (their) secret names as stated in (the scripture of) seventy million verses. Śaṅkara, Ananta, Śrīkaṇṭha with Piṅgala as the fourth and Sādākhya, O god, as the fifth.[9] These are the five bestowers of immortality (*amarakāraka*). They bestow both wealth and accomplishment and should always be worshipped. (12cd-14ab)

The Five Gestures in the Five Sacred Seats

(The wise know that) Yonimudrā is in Kāmākhya. (They also) know that Karālā in the south, Padminī is in Pūrṇagiri, and that Ghaṭamudrā is in between them[10] (whereas) Kadambinī is in the sacred seat (called) Tisra. The pentad of Gestures has arisen (in this way). (14cd-15)

The Colour and Motion of the Five Seats

The visualization (*dhyāna*) (of the sacred seats) is said to be of four kinds. The colour of Oḍḍiyāṇaka is dark blue (*śyāma*). Jālandhara is said to be red. (Pūrṇagiri) on the left is yellow. The following visualization is white and is known to be in Kāmākhya. (16-17ab)

The visualization in the centre is immobile while that in the south moves. That in the north is of both natures. The visualization in front is very stable. (17cd-18ab)

The Cosmic Ages

O god, the Kṛta Age is in the centre, the Tretā Age is in the southern corner. One should know that the Dvāpara Age is in the north while the Age of Strife is said to be in front. O Great God, the four Ages are thus said to be (located) in the Wheel of Gestures (*mudrācakra*).[11] (18cd-19)

The Teaching of the Three Trees

There are three trees in the triangle (of AIṀ).[12] (The wise) know that the Kadamba (tree) is in front. The Bilva (tree) is said to be in the south, while the (tree) called Ciñcā is in the north. The sacred seat of Yoga (*yogapīṭha*) has thus been explained in accord with the division of the Principles. (20-21ab)

O handsome one, I will (now) tell (you), about the three trees according to the Path of Kula. The intellect is in the centre of Fire (*tejas*). Both are modifications of the mind stuff (*cittavṛtti*). The three are established threefold in the latent trace of non-duality. Ciñciṇī who is the state of unity (*samarasa*) exists there by virtue of the bliss of the Yoni.[13] (21cd-23ab)

Once the mind reaches the Kadambaka (consisting of) all the energies (*kalā*), it (begins to) rotate. It arises and dies away constantly in the foundation of the energy (*kalā*) of Maṇipūrṇa. The Self speaks constantly and the Kadambaka resounds (without interruption). (23cd-24)

The Drop (*bindu*), which is the Bilva (tree), arises above by breaking through to the upper (levels). (Then) by dividing the seen from the unseen (*dṛṣṭādṛṣṭa*) (one attains the reality) called the Ciñciṇī tree.[14] (25)

The teaching concerning the Trees has been declared with relation to the three outer trees. O Great God, he who knows it is said to be one who (really) desires the Doctrine (*matārthin*).[15] (26)

The Five Siddhas

Śrīnātha said:

O goddess, I have another doubt concerning (the manner of) praising the sacred seats by means of which adepts attain knowledge. By (your) grace please tell me. (27)

The venerable (goddess) Vakrā said:

I will tell you, O god, what I have not told to anybody else. I have not revealed it (even) to Brahmā and the other gods.[16] (28)

I will tell you (the teaching) the Supreme Lord has brought down (to earth), the cause of knowledge of the Self (*ātmāsaṁvittikāraṇa*). I will tell you as it happened in the past.[17] (29-30ab)

Śrīkaṇṭha, Śankara, Ananta, Sādākhya and Piṅgala. These five pervade the world and the creatures (*bhūtagrāma*)[18] of four kinds. (30cd-31ab)

One should know that Śrīkaṇṭha is Earth, while Śaṅkara is said to be Water. Ananta is said to be Fire (*tejas*) and Sādākhya, Air. One should know that Piṅgala is Space. These five bring about emanation. In this way the Lord who is fivefold is present (and active) in both grace and punishment.[19] (31cd-33ab)

This is the god (*deva*) Ciñciṇīnātha who has observed the great penance (*mahātapa*) which is the accomplishment (*siddhi*) of the (goddess's) Command.[20] (33cd)

O god, one should know that by virtue of (his) omniscience and vibrant (*lolībhūta*) mind he moves in the mobile and immobile (universe) by the Practice of Ecstatic Madness (*unmattacaryacāra*). (34)

The Legend of Siddhanātha, the First Siddha

[21]Siddhanātha, who is called Piṅgala, faultless, omniscient, omnipresent and eternal, has descended onto the surface of the earth on the northern bank of the milky ocean. Made of gold and jewels, it is most excellent. (He descended) onto the mountain with jewelled peaks, rich with wonderful (*vicitra*) gems. (It lies in the midst) of the waves of the great ocean of milk[22] (with which its) stone surface (*śilātala*) is constantly washed. It is attended by the gods, demons, heavenly musicians (*gandharva*) and troupes of Ṛṣis and Siddhas. (35-37)

The virgin Umā, daughter of Dakṣa (Dākṣāyaṇī) (lived) there and so an act of grace took place. (Then), he who is the supreme saviour of all people in the city of the triple world, came down into the land of Bhārata in four forms (*caturmūrti*).[23] (In this way), O beloved, those sunk in the ocean of phenomenal existence where divided into (four spiritual) clans (*gotra*).[24] (38-39)

The first is Mitranātha, the second Caryānātha, the third is called Ṣaṣṭhanātha and the fourth is called Oḍḍīśa(nātha). O lotus faced one, this is the foremost group of four in the four Ages.[25] (Each) on the most excellent (and auspicious) day, (the four) came down (into the world) in order to (assume) authority over the four sacred seats.[26] (40-41)

This, the venerable Oḍḍīśa, is well known by the name of Tūṣṇīśa.[27] (42ab)

The Nine Nāthas

He, (though) one, assumed of his own free will, a body and became ninefold again. O god, he himself will assume the status of a disciple in the (Age of) Strife. It is said here that the (purpose of his) various names is to grace the universe.[28] (42cd-43)

[29](These are) Gaganendra (Lord of the Sky), Mahākubja (who is) Ratneśa (Lord of Jewels) and Padmabhāskara (Sun of the Lotus). Another is Devavaktrāmṛta (Nectar from the Mouth of God). Bhairavābja (Bhairava’s Lotus) is the fifth. (The rest are) Kamalārka (Sun of the Lotus), Śivāmbhoja (Śiva's Lotus), (Rāma) who is the principle of delight (*rāmatattva*)[30] and Kṛṣṇamārtaṇḍanātha (Lord of the Black Sun). These are the nine leaders of the Siddhas.[31] (44-45)

O Lord of the gods, they were born in the wombs of divine human beings in the following places: (the city) called Pauṇḍra, Ahicchatra, the city (called) Śrībhogavardhana, the city of Pāṭalī, the beautiful Māyāpuri, O handsome one, Kanyakubja, Alampura,[32] Ayodhyā and Vardhamānaka. (46-47ab)

Endowed with the power of Yoga and knowledge, they are good supports (*svādhāra*) (of the teaching transmitted) in the Kaula tradition (*kaulikānvaya*). O Lord of the gods, they have been graced by the god (Tūṣṇīśa)[33] with the three kinds of divine rays[34] that bestow liberation and worldly enjoyment and are born from the sun of (the goddess's) Command in due order. O god, (the) descent (into the world) of the five Nāthas beginning with Gaganeśa actually took place (*tattvatodita*) in due order, on the five full (moon) days of Śrāvaṇa, Āṣāḍha, Vaiśākha, Caitra and Kārttika. (The descent of) the four Lords of the Siddhas beginning with Kamala is said (to have taken place) on the eighth day of the bright fortnight of (the month of) Kaumāra, on the twelfth day of the month of Mṛga, on the seventh of the bright fortnight (*arkasaptamī*) of Caitra, and on the day of the fourteenth of the dark fortnight (*bhūtahna*) of the month of Phālguna. One should not rashly reveal this secret hard to acquire in the world. (49-52)

The first (Gagana), the second (Ratneśa) and the eighth (Kṛṣṇa), in reverse order – these three have merged into the Supreme Abode and have no (spiritual) descendents (*santāna*).[35] (53)

The third (Padma), the fifth (Bhairavābja) and the sixth (Kamalārka) were commanded by the Lord to grace with compassion the sages.[36] These three were terrific (*ugra*) and stayed celibate. They went to the village (*grāma*) called Kalpa. (54-55ab)

The ninth (Mārtaṇḍa), the seventh (Śivāmbhoja) and the fourth (Devavaktrāmṛta), these three belong, as before, to the Śrīsantānakula[37] of which they are the eldest, middling and youngest (members, respectively).[38] The leaders of the Siddhas, that is the lords of creation (*sṛṣṭinātha*) and the others, have (thus) been declared in due order.[39] (55cd-56)

Their Command is very powerful. They do good and, fearless, they are intent on gracing and restraining. They give the nectar of liberation and worldly enjoyment to all the moving and immobile universe. Ecstatic with the inebriation of the wine of knowledge, their eyes roll with bliss. (57-58ab)

Content with the bliss of their own essential nature, they are all said to bring about the accomplishment (*siddhi*) of (the goddess's) Command by virtue of (their) omniscience and (their) vibrant mind. (58cd-59ab)

In each Age they will apply (themselves) on the plane of action (*karmabhumi*) on the surface of the earth to (observe) the penance (*kṛcchra*) called the Practice of Ecstatic Madness (*unmattacaryā*)[40] by means of (their Kaula) practice (*caryā*). Wandering about they reached the auspicious Island of the Moon which, with all manner of wealth, is rich with jewels, gems and gold.[41] (59cd-61ab)

In the triangle within that City of Bliss[42] that extends for seven furlongs (*yojana*), stand three auspicious monasteries (*maṭhikā*). (61cd-62ab)

Rich with the (powerful) light of the upper noonday sun they are full of knowledge and wisdom. ****** imperishable, they should be known in due order. (????) These Siddhas lived in them mighty with the power of Yoga and knowledge, intent on the sacred observance of the deity (*anuṣṭhāna*) for a hundred and one years. (62cd-64ab)

The Legend of Siddhanātha continued

[43]Then, when spring began and the pleasure of winter had past, during the great festival of Harakāntā that falls on the third day of the bright fortnight of (the lunar month of) Caitra, the Supreme Lord, having marked himself with the practice of non-duality, entered the venerable city (*śrīnagara*) at twilight (*raudrasandhyāṁśakāla*)[44] in the form of a mad man (*unmattarūpa*) to play (his spiritual games). The venerable Vṛkṣanātha is well know by the name Gaganendra.[45] He who is called Kūrma in this universe arrived at the boundary of the king's palace.[46] (64cd-67)

The king Candrabimba[47] had a daughter (called) Gaganāvatī. She was a virgin, (just) sixteen year old, endowed with beauty and youth, and (attended) by excellent men, women, eunochs, children and virgins.[48] (68-69ab)

Surrounded all around by (her) attributes (*lakṣa*), aspects (*aṁśa*) and the rest, that young woman mocked him (saying): "Who has come here? (His) practice is (that of demon) Piśācas and Ucchuṣmas (*piśācocchuṣmacaryā*) that makes the hair bristle intensely (with fear)!" When he heard (these words spoken in) jest (*hāsya*), he let out a sound eight times more frightening (than his appearance) and in half an instant, again disappeared. (69cd-71)

The daughter of the wise king was astonished along with the citizens (who had seen him). Overcome with fear, her eyes agitated with confusion (*vibhrama*), she fainted. At night, trembling and her eyes tremulous (with fear), she fell asleep in the womens' apartment (*antaḥpura*). (72-73ab)

(The Siddha gave) this as his command: “Get up! He is the lord of the universe. He is the venerable Mūlanātha himself (*sākṣāt*) who has descended into the moving and immobile (universe) to grace all living beings. Take refuge in him. He is the Lord who is eternal bliss and resides in the centre of the radiance of the Moon.[49] Worshipped, he bestows (that) eternal accomplishment (of all) desire.”

(And so she worshipped him) with garlands that exude divine fragrance and pastes perfumed with incense, with food of many different flavours and many divine sweet meats and snacks along with alcoholic drinks of (all) six flavours and the best kinds of wine and meat and, having praised (that) god whose form was (then) invisible with many kinds of divine hymns and eulogies, she passed the night.[50] (73cd-78ab)

She got up (next morning) and, her heart full of bliss, having adorned (herself), wearing all (her) ornaments and accompanied by (her) maids and attendants, the young woman went there to the hermitage where the Lord of Siddhas resided.[51] (78cd-79)

She approached him with humility, in the proper way, along with her surrounding entourage and then she worshipped the omniscient Nātha, the lord who is the cause (of all things), well. Pleased, he taught them the Transmission of the Skyfarer (*khecarīkrama*). (80-81ab)

Viewed (*avalokita*) by Śrīnātha's Command, they all attained the state of flight (*khagati*). Then all the host of gods, their eyes wide with wonder, looked at each other and discussed with one another. Rudra, Indra, Viriñca and the other (gods) where full of great wonder. (81cd-83ab)

They attained the supreme state by the grace of Siddhinātha (the Lord of Accomplishment), that is, with ease (*līlayā*) by the (power of his) Command alone and not by (many) repetitions of mantra, austerities, fire sacrifices or many kinds of spiritual disciplines (*sādhana*) or much ritual action whatever it may be.[52] Thus they were all awakened in the festival of the joy of the Kula's Command and possessed supreme devotion. (They were, amongst others) the Vasus, the Māruts, husbands and wives with their offspring, sages who observed vows, Atri, Aṅgiras, Pulastya, Marīci, Nārada, Viśvāmitra, Yājñavalkya and other human beings along with their offspring, the gods and demons, the planets, heavenly musicians, the leaders of (the beings) who move in the Void so too other most excellent immortals lead by Rudra, numbering one hundred and sixty million. (85d-86ab)

(Again, amongst them were) Jamadagni, Bhṛgu, Dakṣa, Bharadvāja, Kaśyapa, Kinnaras, Apsaras, Nāgas and other lords of the worlds and those born from their limbs. (There were the) gods led by Viṣṇu who, along with their wives, numbered seventy millions, Kratu, Vasiṣṭha, Pulaha, Gautama, Pracetasa and the lords of the gods beginning with Brahmā and the rest numbering a hundred million. (88cd-90)

In this way, (all) these came (to worship) at the feet of the Lord of the Siddhas in due order, according to whether they were told to be at the beginning, the middle or the end. Then after the most excellent gods had worshipped his two lotus feet, the best drink, which generates the highest bliss, was brought (there for them to drink). (The drink was spiritous liquor) of many kinds, made from fan-palms (*tāla*), leaves, trees and fruit. (91-93ab)

(There was wine produced from) grapes (*drākṣā*), sugarcane juice, honey, brown sugar, flour (*piṣṭaja*), dates, *lodhrī,*[53] rice and more that has not been mentioned. (Their) names, tastes and colours were very varied. Indeed (they were so many and of so many kinds that) who is able to describe them (all)? (93cd-95ab)

Out of devotion, the many kinds (of beings) brought many (kinds of) meat. O one of good vows, the food preparations were very delicious and divine. (They brought snacks) to lick, drink and suck along with scent, incense and garlands. They were offered to (the Lord of the Siddhas) in the prescribed manner, bowing (their) head to the ground. Then he was fitingly worshipped by the gods, who were full of faith and humble virtue, with songs, great instruments and the best hymns and eulogies. (97cd-98ab)

The Boon of the Heroes Drink – the Sacrificial Wine and its Glory

Then (these) excellent Siddhas took up the best of drinks (contained in) divine vessels with their hands. (Siddhanātha), established on the path to be attained, first drank (it) himself and, O leader of the gods, what drink remained (*ucchiṣṭa*) was given to the Nāthas who content, were in yogic states, their eyes rolling in inebriation and their inner being, pure. (98cd-100)

It was taken by the best of the gods and the guardians of the directions, rich in penance and humble and, making a gesture of salutation with (their) head, they drank that (liquor) which was more than nectar. They were (all) completely drunk (*vikalendriya*) by the power of Śrīnātha's Command and their eyes, moving (around with inebriation), were all joyful with supreme bliss. (101-102)

This is why drink (*pāna*) is called the drink of the gods (*surapāna*). O god, those who do not imbibe it are demons, Rākṣasas and carnivorous black magicians (*yātudhāna*) who are devoid of the glory (*vibhava*) of their own true nature. (103-104ab)

When the venerable Lord (*nātha*) and Pārvatī[54] were satisfied, seeing (their) great joy, Śrīnātha gave (them) the boon of the heroes' drink (*śrīvīrapāna*) that wine (*surā*) may be (the means by which) this imperishable and supreme bliss is established by yogis in all respects (*samantataḥ*) in the course of the (repetition of) mantras, worship and sacrifices. (104cd-106ab)

There is no success (*siddhi*) if there is no wine (*surā*) (to offer) in the sacrifice, the worship of ancestors, at a wedding, on the auspicious occasions (when idols and the like) are installed (*pratiṣṭhā*), during the lustration of the diety, fire and the teacher by Yoginīs, Ṛṣis and Siddhas, when knowledge and wisdom are transmitted, or when there is a great battle between armies.[55] (106cd-108ab)

Wine should be always close at hand and respected (*pūjyamānā*). Wine should not be drunk by those who are devoid of knowledge and ritual (*kriyā*) and without (deep spiritual) feelings (*bhāva*) and devotion or by those who, out of greed, lead an immoral life. (It should not be drunk by) atheists, cheats, those devoid of deep feelings or compassion, those who have not been initiated into the mantras of the teacher, god, fire and Yoginīs. I have ordained a terrible (*raurava*) hell for men (such as these) who drink (the liquor) of Kaula adepts (*vīrapāna*).[56] (108cd-111ab)

That action due to which the fettered certainly fall into hell, elevates the wise knowers of the three times.[57] (111cd-112ab)

Wine will always be the truth that bestows liberation and worldly benefits to those devotees of the teacher, god, and fire who have been purified in this way with its drops. Meat and wine (*aliphalgu*) are well known as the Kaula substances (*dravya*) of the Siddhas. (112cd-113)

As this is so, he who finds fault (*dūṣaka*) with them will go to a mighty hell and, O mistress of the gods, he will stay (there) for eight of Brahmā's days. (114)

Viṣṇu is the juice (*rasa*), Brahmā is the foundation (*ādhāra*), the idol (*mūrti*) is Maheśvara, and the bliss ever present in oneness (*samarasa*) is the goddess Kubjikā. Mūlanātha is (present) in (its) glorious power (*vibhūtva*), therefore make (all things) one (*samarasa*). (115-116ab)

As long as (the adept) does not make (all things) one, there is no success (*siddhi*). O god, drinking with the uninitiated (*paśu*) without having worshipped the Śrīkrama or offered libation to the yogis (leads to) the hell of (fallen) Kaula adepts (*vīra*). (116cd-117)

Wine (*surā*) is Śakti, liquor (*madya*) is Śiva,[58] while the joy (of inebriation) is said to be liberation. (118ab)

This moving and immobile universe that extends from Ananta to Śiva, the entire sixfold reality (*ṣaḍvidhārtha*), gross, subtle and supreme, is all lustrated by the offering of just one drop of liquor (*ali*). (118cd-119)

A sacrifice, (any) sacred bathing place (*tīrtha*), penance, charity, vows, spiritual practice (*caryā*), thousands of tens of millions of recitations of mantra, fire offerings and acts of adoration, all of these (together) are not worth a sixteenth part of (liquor), the Lord of Joy (Harṣadeva). (120-121ab)

Once the Supreme Lord had said this and graced them as he chose to do out of the compassion (he felt for them), he disappeared from there. (121cd-122ab)

When those Nāthas had left, the gods went to their city. As they are satisfied with the supreme nectar (*amṛta*), they are said to be immortals (*amara*). (122cd-123ab)

The Sixteen Siddhas

Now * * * * (?)[59] when four years of this world had past freely during the Age of Strife, they again descended (into the world) at my Command onto excellent mountains, on the ninth day of the bright half of the fortnight in Caitra, Aśvina and Kārttika at Śrīśaila, Pāripātra and Arbuda, respectively. (These) best of men (powerful like) intense lightning (*tīvravajranarottama*) kept silence for a solar year, intent on worshipping the Śrīkrama. Once they had performed an excellent Kula sacrifice, (they) again went to the City of Supreme Bliss[60] and there they occupy their own position of authority. The bliss within the (Wheel) of the Self-supported (*svādhiṣṭhāna*), which is the true secret, is generated from (their) mouth. (123cd-127)

In the Age of Strife, they will belong to their own lineage of (spiritual) offspring of the best, middling and lowest (lineages) (divided) into (two) groups, one divine (*divya*) and the other human (*adivya*).[61] (128)

The Sixteen Divine Siddhas

(The sixteen divine Siddhas are) 1) Piṅgeśa, 2) Śvetanātha and 3) Krūrābhra, 4) Mativibhrama, 5) Ardhenu, 6) Madanomattakaulārka, 7) Kulabhāskara, 8) Kauleśa, 9) Kulamātaṅga, 10) Rudramārtaṇḍa, 11) Aghora, 12) Caṇḍavega, 13) Ṣaṭhānanda, 14) Khageśvara, 15) Kumuda and 16) Oḍradeva.[62] They are (all) rays (of the light of the deity) and, omniscient, omnipresent and imperishable, they reside within the division of the three seed-syllables. They reside on the path of the sixteen Supports (*ādhāra*) of the moving and immobile universe. These are the divine (Siddhas). They possess great power (*vīrya*) and are well know as the Supports.[63] (132)

The Sixteen Human Siddhas

These same (Siddhas) according to the other (*apara*) division, are said to be those who know the Śrīkrama in this profane (*adivya*) world of men and possess the power of the divine Command. (133)

They will be men who, in the form of the sun, will remove the darkness of ignorance (of other) mortals. Learn their names from me.[64] (They are) 1) *Candrābja* (Moon Lotus),[65] Vatsa 2) *Gulma*, Arka (Sun) 3) *Stambha*, Śaktyānala comes next, (then) 4) *Karpāsagarbha* (the Cotton Plant), Mātaṇga (Elephant) 5) *Vaṭa*, Siṁhaikavikrama 6) Trailokya, *Viraja* (Brilliant) is the sixth, 7) the venerable Pūpātmā,[66] Jaya (Victory), 8) *Kāṁsāla*,[67] Abhayānanda (Joy of Fearlessness), 9) *Bhoga*, Ratneśa (Jewel of Enjoyment), who is beautiful, 10) the venerable *Bimba*, Vimalānanda (Pure Joy),[68] 11) *Tīkṣṇa* (Severe), Vijaya (Victory),[69] 12) *Varāṅgarudra*,[70] Vīreśa (Lord of the Heroes), 13) *Śrīdhāra,*[71] Keśaveśvara, 14) *Sahasa*[72] (who is) Amalamudrā, 15) *Vaṅka,*[73] Vibuddhaḍāmara (Wizard of the Awakened Worlds) and the one called 16) *Bhoja*[74] who is the sixteenth. (134-138)

The one at the beginning of the group, the second, third, fourth, sixth, the eleventh and another. These are the seven leaders of the Siddhas who have authority in the Lineage of the Eldest (*jyeṣṭholi*). (139)

The seventh, eighth and ninth, the tenth, the twelth and another is the thirteenth who is preceded by millions (*koṭipūrva*).[75] These seven are said to have authority in the Lineage of the Child (*bāla oli*). (140)

O handsome one, the fifth and the fourteenth – this is the pair that, shining like the fire and the rising sun (*bālasūrya*), is in authority in the Middle Lineage (*madhyamoli*).[76] (141)

There are many others, including Candrabimba (Lunar Orb) and the rest, who are outside that City. (These teachers) were transported outside by the current of the nectar of the Command (to fulfil) the purpose of the wise. (142)

In this way, these accomplished beings who have come from the three lineages (*santāna*) and whose excellent hermitages are found in many places, have established (their) divine authority (in the world). (143)

Again, their (spiritual) descendents, sons, grandsons and the rest, who are of three kinds (and belong to the transmission) that is human (*adivya*) and mutual (*itaretara*),[77] will be innumerable. (144)

Such is this, your emanation, beginning with Gaganeśa, within the Kula lineage (*anvaya*). Once (their work) has been done, they dissolve away and (assume) the form of the Void of Consciousness of the venerable Mūlanātha. (145)

The Thirty-five Consorts of the Nāthas

They are born of from the body of Bahurūpa (the Pluriform One) who consists of thirty-two syllables.[78] They are said to be the thirty-five Śrīnāthas[79] who bestow liberation and worldly benefits. (146)

In the same way the imperishable Yoginīs, Kubjā and the rest, who are born of Kula (number thirty-five). They are the consorts of (these) Siddhanāthas (and there names) are stated here (as follows), in due order. (147)

1) Jñānāmbā (Mother of Knowledge), 2) Śrīkujāmbā (Venerable Mother of Action),[80] 3) Raudryāmbā (Terrible Mother), 4) the one called Vāmā, 5) Jyeṣṭhāmbā (the Eldest Mother),[81] 6) Ambikāmba,[82] 7) Kāmāmbā (Mother of Passion), who is said to be the seventh. 8) Jālāmbā, the one called 9) Pūrṇā (Full) and (the wise) know 10) Oḍḍāmbā[83] to be the tenth[84]. 11) Gaganāmbā (Mother Sky), 12) Mahāsiddharatnāmbā (Mother of Jewels), 13) Padmacampakā, 14) Suravaktrāmṛtāmbā (God Face Mother of Nectar),[85] 15) Lalitabhairavī, 16) Kamalāmbā (Mother Lotus), 17) Śivāmbā (Śiva's Mother), 18) Rāmāmbā (Rāma's Mother), 19) Kṛṣṇapiṅgalā (Dark Blue and Tawny),[86] 20) Candrāmbā (Mother Moon), 21) Kalpaviśvāmbā (Mother of the Universe and Aeons), 22) Vaṭāmbā (Best of Mothers), 23) Gulmaśekharā (Bud Crest), 24) Stambhāmbā (Mother Pillar), 25) Virajāmbā,[87] 26) Raktākṣī (Red Eyes) and, 27) Kulaśāsanā. (There are also) 28) Lakṣmyambā,[88] 29) the one called Sundarāmbā and 30) Kuṭilāmbā (Crooked Mother), O sinless one, 31) Vikārāmbā (Deformed Mother), 32) Vegāmbā, 33) Unmanyāmbā (Transmental Mother), who gives what one desires, 34) Mohinyāmbā (Deluding Mother) and 35) Manohlādā (Delight of the Mind). These are who they are said to be.[89] (148-153ab)

Awakened by the Supreme Nectar they are omniscient. Intent on enlightening (the ignorant),[90] they can destroy the great current of the fetters of death and the three (forms of) suffering. (153cd-154ab)

The Thirty-five Nāthas

Now, in due order, I will tell (you) the secret of the various names of these, the venerable Nāthas mentioned previously. The Command is accomplished (*ājñāsiddhi*) merely by knowing (this) and reading it constantly in the prescribed way in front of the Śrīkrama. (154cd-156ab)

The Five Siddhas

1) I salute with devotion he who is the first (Siddha), the sun who is Śrīnātha and victory (*vijaya*) (itself), he who, by means the divine rays born from the venerable pure (reality) (*śrīvimala*), has initiated all the deities who are on the Path Beyond Tranquillity (*śāntyatīta*) into the Kula teaching. (156cd-157)

2) I praise Sādākhya, the best of teachers, who is the Word Absolute (*śabdabrahman*) and bestows grace on those who reside on the plane of reality which is Tranquillity.[91] (158)

3) I salute Ananta, the Rudra who is endless, imperishable and abides in compassion and grace on the path of knowledge (*vidyāvartman*). (159)

4) I salute Lord Śaṁkara,[92] the Rudra whose host are the Heroes (*vīra*) and the Mothers (*mātṛ*) and who always does what is auspicious for those who reside within the (force of) the Foundation (*pratiṣṭhā*). (160)

5) I salute Śrīkaṇṭha who has burnt away the impurity of Māyā and, present on the Path of Cessation (*nivṛtti*), has come down (into the world) in many forms.[93] (161)

The Five Nāthas of the Sacred Seats

Piṅgala

1) I praise the pervasive Lord Piṅgala who is on the path within the Egg of Brahmā and who, having himself drunk the wine (*surā*) which is the nectar of divine knowledge, has given it (to others). (162)

Mitranātha – Kāmarūpa

2) I, desirous of knowledge, bow to the venerable teacher Mitranātha who, out of love, become friends (*mitratāṁ gataḥ*) with the venerable goddess (*śrīdevī*) in the eastern seat.[94] (163)

Caryānātha – Jālandhara

3) I salute Caryānātha who is established authority in the lotus of the venerable southern seat by (observing) the vow of Kula practice. (164)

Ṣaṣṭhanātha – Pūrṇagiri

4) I salute the venerable Ṣaṣṭhanātha who, once he had understood the Pentad of Kula (*kulapañcaka*) in the hermitage of Pūrṇagiri, established (his) authority in the sixth (*ṣaṣṭha*) (one).[95] (165)

Oḍḍīśanātha – Oḍḍiyāna

5) I salute Oḍḍīśa(nātha) who, assuming the great and excellent (*uḍḍāmara*) form generated from the universe (*jagadudbhava*), resides in the lotus of the venerable seat in the centre. (166)

The Nine Nāthas

1) I praise Gagana, the tree, who, by imbibing the wine of the Light has entered the supreme path (of realisation) and, having done so, graced and chastized the Fire, Moon and Sun who hold the net (of bondage). (I praise him) who possesses the authority of intense power in the hermitage of the Light of the Mind (*cittabhā*) within the Lotus of the Moon, which is in the shade of the Wishgranting Tree of Kula. (167-168)

2) I salute the eternal Ratneśa who, fivefold (*pañcātman*), is the great hunchback (*mahākubja*) who, by virtue of (his) pure strength, has (established a) lineage (*santāna*) of (disciples of) sound intent, bent all things (to his will) (*kubjīkṛta*) and gazed upon the serpents. (169-170ab)

3) I praise the venerable Padmabhāskara (Lotus Sun) who has established (his) authority over all the Yakṣas, Heroes and Mothers in the Great Lotus Forest (*mahāpadmavana*). (170cd-171ab)

4) I bow to the venerable teacher Devavaktra who initiated the Rākṣasas and the Guhyakas in the hermitage of the awakened one (*vibudha*). (171cd-172ab)

5) I bow before the venerable teacher Bhairavābja whose Command is very powerful (*tīvra*) and looked with wrath at the Yakṣas and the sages in the Naimiṣa (forest) and the eight guardians (*kṣetrapāla*) in Kāśī during the sacrifice of the venerable Bhairava. (172cd-173)

6) I bow before Śrīnātha, called Kamalārka, who consecrated Indra (*śatakratu*) in the lotus garden of Mahendra and then went to Mahālakṣmī's secret residence (*niketana*). There, in due course, in order be glorify (the goddess) (*kīrtyartha*) he playfully dryed out, burnt and tore apart all the trees and then again (restored them by) the supreme act of nourishment (*āpyāyana*). (174-176ab)

7) I praise the imperishable Śrīnātha, Śivāmbhoja (Śiva's Lotus), who initiated his two (disciples) with divine nectar in the midst of the full Fire of Time. (176cd-177ab)

8) I bow before the venerable teacher Rāma who, by the compassion of Ratnanātha (the Lord of Jewels), has graced (his disciples) and sports within all embodied beings at the junction (*sandhi*) of the three and the four roads.[96] (177cd-178)

9) I salute Kṛṣṇamārtaṇḍa (the Black Sun) with devotion, the Nātha who is (like a) black fire. Kāma in Kubjāmraka, Kṛṣṇa, the lord of the world, in Dvārakā, Gaṇādhyakṣa in Śrīnagari and the two Jitendras in Strīrājya and Malayācala have become his servants. (179-180)

The Sixteen Nāthas of the Sixteen Supports[97]

1) I salute Candrābja[98] whose moustache and eyes are brown (*piṅgala*) and abides constantly in the first support, ecstatic with the inebriation of the wine of knowledge. (181)

2) I salute Gulmanātha,[99] brilliant like ten million moons, whose form is that of a child[100] and, white (*śveta*), resides in the centre of the second hermitage. (182)

3) I salute Stambha[101] in the third station of the Self who is the fire of power (*śaktyagni*) who, (brilliant) like the autumn sky, has lotus eyes and severe (looking) eyebrows. (183)

4) I salute the venerable one called Karpāsa who is the agitation of the intellect (*mativibhrama*)[102] that shines in the lotus of energy of the fourth support and is the light (*ābhāsa*) that bestows the stream of bliss. (184)

5) I salute Vaṭasiṁha who is called Ardhenduvadana (Half-moon Face)[103] and is the perpetually manifest ray (of the light of consciousness that shines) in the Lotus of the Sun in the fifth support. (185)

6) I salute Virajeśa who is the ecstatic risen sun of Kaula (the union of Śiva and Śakti) (*unmattakaulārka*)[104] on top of the Five Voids[105] in the sixth (support) which is the sixth lotus of Kula. (186)

7) I bow to the venerable Pūpātmā who is Jayānandanātha, the perpetually risen sun of Kula (*kulabhāskara*)[106] within the seventh support. (187)

8) I salute Kauleśa who is Abhayānanda,[107] the radiant energy of (divine) sound (*dhvani*) in the eighth abode of Lakṣmī, which is the plane where the energies of the Three Abodes (of Fire, Sun and Moon) are consumed (*tridhāmakalāgrāsapada*). (188)

9) I salute Kulamātaṅga who is Ratneśa[108] in the ninth hermitage. He is inebriated (*vikalendriya*) with the ecstasy (*mada*) of the taste of the aesthetic savour (*rasa*) of the expanse of consciousness. (189)

10) Rudramārtaṇḍa[109] whose radiance is the great Fire of Time is in the tenth (support). I bow (to him) the venerable teacher Śrībimba called Vimala. (190)

11) In the eleventh hermitage I salute Khaḍga,[110] who is called Vijaya. (He is) Aghora who severs the bonds of Karma in the terrible (*ghora*) world of transmigration. (191)

12) I bow to Śrīnātha, who is Varāṅgarudra (otherwise called) Vīreśa, the guardian of the field (*kṣetrapāla*), whose form is ferocious (*caṇḍa*) and nature Caṇḍavega[111] who, having entered the twelfth station of bliss, has brought (all things) under (his) control. (192-193ab)

13) I salute the venerable Ṣaṣṭhānanda, (also) called Keśava,[112] whose mouth is the Void (*khavaktra*) and shines more than gold on the plane without support. (193cd-194ab)

14) I bow to the king of the gods (*devendra*) who, blue in colour, is Khageśvara (the Skyfaring Lord) whose nature is a mighty force (*sahasa*)[113] and is the fire of all the Mudrās located in the fourteenth support. (194cd-195ab)

15) I salute Vaṅka, the lord of the clan of the gods (*vibudhagotreśa*), Śrīnātha Ḍāmara, the lotus (*kumuda*) which, brilliant as the sun, is in the lotus of the fifteenth house. (195cd-196ab)

16) I salute with devotion the venerable teacher who is (full of the) rays of bliss in the supreme support called Emission (*visarga*). He is well established in the bliss of the Command and the gaze (he projects) in order to grace the universe, is intense (like) the Fire of Time. Endless, imperishable and the first (*pūrva*), he is known as Bhojadeva. (196cd-198ab)

The body is sustained all around (*pari*), in due order, by the four, five, six, half of eight and group of five along with the four and by the three, the group of six and by the main group of eight.[114] (198cd-199ab)

Śrīnātha

Pure knowledge (has been revealed) in the venerable sacred seat by the gem which is the Kula Command of the Siddhas as Ānanda and the rest and as the (acts of) chastisement (*nigraha*) and grace of the universe.[115] (199cd-200ab)

I praise Śrīnātha (who is this knowledge), the teacher of the universe, the root (Nātha) who is accompanied by Brāhmī and the other (mothers) and who, along with mother Kubjā, is imperishable and pervasive. (I praise him who), immobile and eternal, bestows omniscience and all else one desires and, occupying the position of the root authority (*mūlādhikāra*), is consciousness.[116] (200cd-201)

This is the supreme secret, the growth of all the brilliance (*dīpti*) of the Command.[117] The (energy of the goddess's) Command radiates intensely and the current of the mighty fear (of transmigratory existence) is destroyed of one who reads it regularly (*sadā*) in due order with respect and with hands folded and raised to (his) head in front of the *Śrīmata* or the *maṇḍala* of Siddhas. (202-203)

Diseases are destroyed, the enemies (of the sacrifice) (*arāti*) are kept under control and, once one has enjoyed the venerable and extensive pleasures of the world (*bhoga*), one attains supreme universality (*sāmānyatā*). (204)

The teaching the Nine Targets[118] is the firm decision to faithfully practice (*anuṣṭhāna*) the Vidyā.[119] This truth was uttered in the past by the Unborn of unmanifest form.[120] (205)

The extent (*pramāṇa*) of the (Siddhas) brought down (to earth) by the Siddhanātha called the venerable Ṣaṣṭha(nātha), is said to be beyond number. (206)

The Places where Initiates Reside and Received Initiation[121]

Initially, five Siddhas[122] were brought down onto the 1) peak of the Stone, along with five others, in 2) the Kadamba cave and fifty in 3) Śrīpura. 4) Seven were graced in the venerable (town of) Kulūtā, 5) ten in Ānandapura and 6) fourteen in the venerable Kāmarūpa. One should know that there are 7) three in Jālandhara. (Indeed, the Siddhas) in the Western (Tradition) are as many as the stars. (207-209ab)

8) They should be known to be fifteen in the hermitage of the banyan tree (*vaṭa*) (called) Maṇibhadra, along with 9) four (others) in Virajā and 10) seventy in Haṁsadvāra, 11) twelve in Mahāvāṭa, 12) three hundred in Siṁhala, 13) one hundred and fifty in Aṭṭahāsa, 14) fifty in Devīkoṭa, 15) sixty-four in Pūrṇagiri, 16) half that (number) in Pūrṇapādaya (?), 17) there are another fifteen initiates in the venerable Kollāpura, 18) twenty-four in Satādeṣṭa, 19) seventy-five in Gokarṇa, O god, (there is) the same (number of adepts) in 20) Bālukā and the Lord (*nātha*) has graced (adepts) numbering twelve times eleven on the auspicious 21) Candrabimba mountain. (209cd-213)

(The goddess) was seen by four (adepts) in 22) Yannāśi (?) on the western bank. By the compassion of the intense (power of the goddess's) Command, twenty-five (adepts were initiated) in 23) Kālañjara. (There are) thirteen (of them) in 24) Badarī and twenty-one in 25) Śāligrāma, eight hundred in 26) Kurukṣetra and half that (number) in 27) Naimiṣa, fifty-three in 28) Kanyākubja and seven Heroes in 29) Surālaya, the number of the Principles in 30) Mahātīrtha and two hundred in 31) Citrakūṭa. (214-216)

There are said to be eighty-one where 32) the Ganges (*tripathā*) meets the Vindhyas and twenty-four where 33) the Indus joins the sea. O god, a hundred and eight were brought down into (the town of) 34) Setubandha, seven in the field of 35) the Godāvarī and eighty-four and ninety-four in the land of 36) Kaccha and 37) Koṁkaṇa, respectively. (217-218)

There are thirty-seven in 38) Sandhi and there are said to be forty-six in 39) Sthāna. There are sixteen in 40) Rudrakoṭi and the same (number) in 41) Ayodhyā, sixty-four in 42) Kāmakoṭi, and twice that number in 43) Arbuda. (219-220)

There are ninty-six in the north 56) on the banks of the Ganges, thirty-three on 57) Śvetadvīpa in the great ocean, two on 58) mount Mahendra, twenty-eight on (mount) 59) Malaya, six hundred in the 60) Himālaya and forty-five on 61) Śrīgiri in Caṇḍikā's hermitage. O Lord of the gods, there are one hundred and eighty-one in 62) Dvārikā and thirteen, eighteen and one hundred and one in 63) Śrīrājya,[126] (the land) called 64) Barbara and 65) Marubhūmi, the land of the gods, respectively. The great soul Śrīnātha has rightly gazed upon forty-nine and seven (Siddhas) with supreme compassion 66) on the banks of the Ganges. All of these are said to be the bestowers of (both) liberation and worldly benefits. (223cd-228ab)

(Their) authority to command (*ājñādhikāra*) is of three kinds, divided into manifest (*vyakta*) and unmanifest, along with the transmission (*krama*), (both) divine (*divya*) and human (*adivya*). (The Command) that transcends (every) goal of action is within Supreme Śiva. (228cd-229ab)

The Glory of Wine and Liquor

Śrīnātha said:

[127]O best of women, it is taught (*sūcita*) in the Tantras of those steadfast in practice (*naiṣṭhika*), that the four sins are brahminicide, the drinking of liquor, theft and the pride that resides in the mind along with the fifth associated with that (?). O goddess, one who drinks wine goes to hell. (229cd-231ab)

One falls into the Raurava (hell by drinking) merely (the amount contained in) a drop that (drips) from the tip (of a blade of) Kuśa grass. O goddess, drinking wine is said to be as (bad as) commiting brahminicide. (231cd-232ab)

O Great Goddess, why do you drink it? O Great Mother, (why) is it taught here in this Tantra and in Kula doctrine (that) wine is the best (of substances) and that it gives rise to the fruit of great merit? Even today, I still have this doubt. Please remove it now. (232cd-234ab)

O goddess, what is liquor (*madya*) said to be and what is wine (*surā*) said to be? O Vakrikā, tell me that in truth if you are satisfied (with me). (234cd-235ab)

The venerable (goddess) Vakrā said:

O Lord of the god of the gods, it is called liquor (*madya*) and has been revealed to you, O god, because it is my primary (*mamādya*) charateristic, namely, supreme bliss. Wine (*surā*) is said to be the alchemical potion (*rasāyaṇa*) full of supreme bliss. (235cd-236)

It is called liquor (*madya*) because it has arisen out of the bliss of grape wine (*madirā*) (and because), beautiful, it has come forth from Umā's body and the centre (*madhya*) of the Moon. It is the god who pervades in oneness (*samarasa*) (literally `in equalness of flavour') and its characteristic is supreme bliss.[128] (237-238ab)

The fair lady called Surā (Wine) is also said to be Kuṇḍalinī.[129] Present constantly in the uvula (*ghaṇṭikā*), she is Vāruṇī[130] (the liquor which is) the supreme energy (*kalā*) (of the Moon).[131] Surā[132] resides within the bodies of Kaula adepts (*vīra*) and is said to be the one to be attained (*sādhyātmikā*). (238cd-239)

Liquor is supreme bravery (*śaurya*) and bravery is the emperor of heroes. He who behaves as does (a Kaula) hero (*vīravṛtti*) and, having drunk (this liquor), practices union with the gods, (practices) what is said to be the drinking of heroes (*vīrapāna*), which bestows the fruit of (both) worldly benefits and liberation. (240-241ab)

The Sixty-four Yoginīs

In the past, the Wheel was worshipped on divine Kailāsa, the venerable and most excellent of mountains, during the festival of Madana (the god of love). O Lord of the gods, the mighty (group of) sixty-four (yogis) resides in that, the divine and best of Wheels, along with the First Lord (Ādinātha), in the great festival of supreme bliss. (Their) sixty-four names are those that have been declared one by one.[133] (241cd-243)

(Wine) was drunk by all the sixty-four deities in the Wheel.[134] and they were (thereby) made blissful. Delighted with joy, each one gave a separate name (to the sacrificial drink). (244)

The Sixty-Four Names of the Sacrificial Drink

(There names are as follows): 1) Vīrapāna (Hero's Drink), 2) Ali (Liquor), 3) Khārjūra (Date Wine), 4) Kumbhaka (Jar),[135] 5) Āmbhas (Water), 6) Kādambarī,[136] 7) Rudra 8) Siddhi, 9) Aśva (Horse), 10) Kaustubha,[137] 11) Sundara (Beautiful), 12) Pātra (Vessel),[138] 13) Pūrṇa (Full), 14) Puṇḍarīśa (Lord of the Lotus), 15) Dhvaja (Flag),[139] 16) Gorocana (Musk), 17) Sādhya (Junction), 18) Vyāpaka (Pervader), 19) Yogīndra (Lord of Yogis), 20) Nāgendra (Lord of the Snakes), 21) Karpara (Potsherd), 22) Giri (Mountain), 23) Mukta (Liberated), 24) Candrakalā (Digit of the Moon),[140] 25) Jyoti (Light), 26) Praśama (Tranquillity), 27) Jagattāraka (Saviour of the World), 28) Mokṣa (Liberation), 29) Śīdhu 30) Baka (Crane), 31) Bhāti (Splendour), 32) Mudrā, 33) Jñānaśalākā (Scalpel of Knowledge),[141] 34) Avasthā (State), 35) Unmanabhāva (the Transmental State), 36) Mantra, 37) Pātra (the Drinking Vessel),[142] 38) Kuleśvara, 39) Vimala (Pure), 40) Pañcarātra (Five Nights),[143] 41) Dravya (Sacrificial Substance), 42) Suragaṇa (Host of Demons), 43) Samaya (Rule), 44) Pīta (Imbibed), 45) Rāga (Passion), 46) Aghora, 47) Tumburu, 48) Siddhānta (Conclusion), 49) Rudramūrtistha (Established in Rudra's Form), 50) Gandharva, 51) Śaṅkha (Conch), 52) Śuktika (Mother of Pearl), 53) Adhikāra (Authority), 54) Mahāratna (Great Jewel),[144] 55) Yogeśvara (Lord of Yoga), 56) Mahākula, 57) Naṭeśa (Lord of the Dance), 58) Baindava (Belonging to the Drop), 59) Tāra (Star), 60) Yoginī, 61) Kamalānana (Lotus Face), 62) Ghaṭaka (Jar), 63) Uḍḍāmara (Excellent) and 64) Bhūti (Loot). (These) are said to be the sixty-four. (244-251ab)

O god, these names are very clear and are recollected in the gathering of yogis (*yogīcakra*). O god, one should drink the sacrificial wine (*vimala*)[145] in the field of Kula (only) after they have been learnt. This part (of the teaching) (*bheda*) (concerns) the joyous sport of the sacrificial liquor (*alivilāsa*). As long as one does not understand it clearly, one should not drink wine (*madya*), (otherwise) the Command (of the Goddess) is transgressed. (251cd-253ab)

The (goddess) Surā (Wine) is dark blue and red,[146] beautiful and possesses a fine aroma. That is nectar, not the drinking that takes place in the world. (253cd-254ab)

Today I have clarified what the gods, sages, Siddhas, Yoginīs, yogis and Kinnaras have understood in the past. The drink of unity (*samarasa*) is beautiful; all other liquor is a deceit. (254cd-255)

(The goddess), praised by the gods (*sura*) and Siddhas, is called Surā (Wine) because she arises menstruated (*rajasvalā*),[147] when the good time to copulate comes (*suratāgamakāla*). (256)

The Samayā Vidyā which is completely full and has been invoked (*abhimantritā*) resides in the (drinking) vessel. He who drinks it in front of the *maṇḍala* in the Seat of Knowledge (*vidyāpīṭha*), in the presence of the teacher reaches the supreme Place (*sthāna*) and saves a hundred Kulas. (257-258ab)

If lustration with (just) a drop (of wine) has been offered along with incense, he who has devotion saves a hundred Kulas. O god, the heroes who drink (wine) as the fettered do without first worshipping the Śrīkrama and offering the lustration, go to hell. Drunk in accord with the inner transmission (*antaraṅgakrama*), one attains Rudra's plane. O god, one who drinks openly goes to a lasting (*dhruva*) hell. (258cd-261ab)

One should not allow (such a one) to come (into the ritual enclosure because) he will be one who does great damage. The Kula teacher should not (even) speak with him. If he does so, he does violence to the Yoginīs and the (goddess's) Command is broken. (261cd-262)

It is said that the supreme rule of the Supreme Lord's (tradition) (*pārameśvara*) (is to drink) wine (*madya*).[148] O god, this should be kept secret from those who have not been initiated (*asamayin*). Poverty is (the consequence of) breaking the Command and death when one disobeys the teacher. If the Command is broken, how can there be success? By transgressing, one goes to hell. (263-264)

After the reciter of mantra has rotated (the drinking vessel) three times around the *maṇḍala*,[149] he propitiates it with liquor (*ali*). Then, clenching his fist there (around the cup) with the index finger and the little finger of the left hand (extended), he should drink the liquor that serves as the sacrificial offering (*alidravya*).[150] Having eaten the sacrificial pap (*caru*) that energizes (consciousness) (*dīpaka*),[151] one should drink (the sacrificial) drink. (265-266)

O handsome one, having offered flowers and incense, one should prepare, along with own's (spiritual) clan (*svagotra*) and free of thought (*nirvikalpa*),[152] the Cup of the Rule (*samayapātra*). (267)

All castes (*varṇa*) always meet together as one in the gathering (of initiates) (*cakra*). (But) once they quit the gathering, all castes (again) become separate.[153] (268)

The Five Lustrations (*tarpaṇa*)

Having offered a libation with the index finger (pointing) to the sky, the circle of the firmament, (the beings who reside) in the juncture (between heaven and earth) (*saṁdhāna*) have been offered a libation and, satisfied, bestow success (*siddhi*). (269)

O god, having offered a libation with the middle finger (pointing) to the sky, the circle of the firmament, the manes have been offered a libation and, satisfied, attain the supreme state. (270)

Having offered a libation with the ring finger, all the Transmission and the Circle of Teachers has been offered a libation and thus (also) the triple world, with all that moves and is immobile. (271)

Having offered a libation with the little finger, the Siddhas, Bhairavas, Mothers, Heroes, Yoginīs and teacher are (all) certainly satisfied. (Along with them) all human Siddhas from the mortal world are satisfied. (272-273ab)

Having offered a libation with the thumb, the Rudras are satisfied; (they are not satisfied) in any other way. And, without a doubt, all the deities are satisfied along with the Mothers. (Therefore) perform the libation five times. (273cd-274)

The Fruits

(In this way) one attains (mystical) flight, Rudra's accomplishment, the immortal state that does not decay, the eight (yogic) accomplishments, the arousal of the (beloved's) body (*purakṣobha*) and one's cherished desire. (275)

One penetrates the (supreme) state with (just one) drop (of wine) and, having offered the libation, one gains countless fruits both in this world and the next. (276)

He attains fame and acclaim in this world and the status of a Hero. (He experiences) intense energy (*dīpti*) in (his) body and (obtains) the wealth of mastery (over all things). He spends his time in the play of pasionate love (*kāma*). (That spiritual) son (*putraka*) gets whatever he desires. The next world (to which he is destined) is pure and the adept (*sādhaka*) attains liberation. (277-279ab)

O Lord of the gods, one should drink (only after) having completed the prescribed procedure for the liturgy of the sacrificial liquor (*alikrama*), namely, the libation of the deities and the others. (In this way) one attains supreme success (*siddhi*). (279cd-280ab)

No success is visible in the Western (Tradition) without (drink), the (sacrificial) substance Heroes (*vīradravya*) (offer). On this Siddha Path that substance (*artha*) is called `meat and wine' (*aliphalgu*). One should not feel doubt (*vicikitsā*)[154] (in any circumstance about offering it) even when (one's) vital breaths are (at one's very) throat. The Western Path is accomplished by means of liquor (*ali*) – there is no doubt about it! (280cd-282ab)

He who repeats mantras but does not in this way possess the joy (*harṣa*)[155] (that comes from the sacrificial drink) is a fettered soul in the Yoginīkula; he is not a disciple belonging to the Kula transmission (*kulakrama*). The Western Transmission is averse (*parāṅgmukha*) to him and he suffers a terrible fall from the Kula. (282cd-283)

What he has worshipped is certainly fruitless for him. Ignorance is shown to him, not mantra nor the *maṇḍala*, not the Transmission, nor the Kula or Kaula. (Indeed) one should keep the secret hidden (from him). (284-285ab)

Never allow (him) to enter the sacrificial ground (*yāgabhūmi*). Having abandoned (him) with effort, one should avoid (him) like a gnat. One should never show him the scripture (*āgama*) or the sacred grid (*prastāra*). (285cd-286)

Only he who is free of all doubts and praises the drinking of Heroes becomes fit (to be a part) of the Western Kula teaching. The fettered state is said to be doubt (*śaṅkā*).[156] (In reality), there is no fettered soul anywhere amongst living beings. (287-288ab)

(Thus) abandoning the feelings of the fettered state (*paśubhāva*), one should practice Kula and Kaula. Once one has attained the plane of Kula and Kaula, where is doubt? And where is impurity? The reciter of mantra moves (freely) according to his own desire. (For him) there is no fear in the ocean of phenomenal existence. (288cd-289)

(Even) if one is Kuleśvara (himself), directly visible, one should not dine with others (who belong to a different tradition) (*ekapātraṁ na kartavyam*).[157] The mantras (of one who does so) become averse (to him) and (he encounters) obstacles at every step. (290)

The slender (beautiful young) woman who resides in the centre of the Moon is the Transmental (*unmanā*) who transports the mind. Merged in the plane of the Bliss of Stillness (*nirānanda*),[158] she is (the goddess) Wine (Surā).[159] (Mere) wine is not (the true) wine. (291)

I have hidden (this) path. It has not been revealed outside (the circle of initiates). People do not know this and so they are said to be fettered souls. All the troupes of gods and sages, Guhyakas, Siddhas, Kinnaras and the excellent hosts of Nāgas drink their fill (of wine) as I myself do.[160] (292-293)

Wine (*surā*) is the joy of sex (*surata*). Wine is born of what is called passion (*kāmākhya*). During sex, wine is the (fluid) in the beautiful Wheel (*sucakra*) within the Yoginī.[161] The woman (*vāmā*) who is in the calyx (of the Wheel) and transports the nectar of the Supreme Light is the wine born in the body. It is most excellent, gives eternal bliss and is auspicious.[162] (294-295)

One should worship the Kaula Transmission with that (wine) by means of the Gesture of Blissful Consciousness (*sukhavijñāna*). (In this way) the Supreme Brahman is satisfied. (296abc)

One should not cause this to be done in the midst of the uninitiated (*paśu*). That secret should always be kept hidden. By hiding it, (one achieves) Kaulinī Siddhi. If one who is linked to the Samayā Vidyā drinks (wine making the ritual) gesture, having drunk it in front of the *maṇḍala* and the sacred seat of wisdom (*vidyāpīṭha*), he attains the supreme place (*sthāna*) and he saves a hundred Kulas. (296d-298)

Once he has understood his own Transmission (*ātmakrama*) well, (the initiate) should practise drinking (*pāna*). He should contemplate the cup as the dawning Sun and the mantra as the dawning Moon and (then) drink. He should imagine that the Drop, the colour of a ruby, is in between them. Drink the (energy of this), the seventeenth digit (of the Moon), completely full of the Supreme Nectar. (299-300)

The nectar that flows from that energy (*kalā*) is the radiant power (*tejas*) of the Great Bhairava. O Lord of the god of the gods, that is (the true spiritual) liquor (*madya*), not that produced from grapes and sugar cane.[163] (301)

Drink the wine (*madya*) that is the drink of Yoga. While sexual intercourse (*maithuna*) is the Supreme State. (The couple) Sound and the Drop (*nādabindu*) is the supreme meat (*māṁsa*) the yogi should eat by means of Yoga.[164] (302)

The ocean of one's own intellect is churned by (divine) Sound (*nāda*), that is, the blissful mind (*ānandacitta*). This is the excellence of the Eye of the Void namely, that the alchemical potion (*rasāyaṇa*) is washed by that. (303)

One should make a mental food offering (*naivedya*). O dear one, (spiritual) bliss is in the drink. One should know the venerable Bhairavī of the Drop (*bindu*) in the field in the lotus between the eyebrows. The arising (of the deity) within tens of millions of mantras takes place when the mark (*tilaka*) of supreme consciousness (on the forehead has been made).[165] (304-305ab)

O god, this, the most excellent bliss of emission (*vikṣepa*),[166] has been explained to you. O god, it gives rise to all (forms of yogic) accomplishment. Do everything (only) once this has been understood. (305cd-306ab)

This is the (forty-sixth) chapter which is the emergence of the transmission (*kramodaya*) with regards to the description of *the Glory of Emission* (*vikṣepādhikāramāhātmya*). It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It is on the path of the Seat of Knowledge (*vidyāpīṭha*) and is the ultimate purport of the Pure Six Thousand (verses) (*vimalaṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

CHAPTER FORTY-SEVEN

The Description of the Practice of the Rule

The Visualized Form of Vaṭuka

Śrīnātha said:

O auspicious one, today I have clearly understood the greatness of (wine) the God of Joy (Harṣadeva) and the prescribed procedure concerning it in due order. But, I have not heard about (the procedures concerning) Vaṭuka (the Child). What is his condition as a child? O fair faced one, where did he originate? What is the purpose of worshipping him? How is animal sacrifice (*bali*) offered (to him)? O mistress of the gods, tell me this, (his) visualised (form) (*dhyāna*) and rite of adoration, in due order. (1-3ab)

The venerable (goddess) Vakrā said:

The Lord Vaṭuka has six faces. Greatly powerful, he is my son. I have given (him) authority over all the Kula teaching. The great souled Lord accepts (his) part of the animal sacrifice (*bali*). It is not offered to the Kula scripture if it has not been (first) offered to Vaṭuka. (3cd-5ab)

He is big, fearsome and tawny, (his) hair is matted and (his) eyes are brown. He carries a staff in his hand and is adorned with snakes as ornaments. He overcomes the mass of the many obstacles before (him).[1] (5cd-6)

The Fifty Guardians of the Field (Kṣetrapāla)

Śrīnātha said:

O Kuleśvarī, I have understood the procedure prescribed for Vaṭuka. I want to hear something else, namely, the tradition (*āgama*) concerning the guardians of the field (*kṣetrapāla*). (7)

The venerable (goddess) Vakrā said:

O you who are praised as the great lord of heroes, now listen as I explain (this to you). I will tell (you) how they awaken the aggregate of letters. I will now tell you their names, each one separately. (8-9ab)

1) Āsuri, then 2) Indragarbha (Containing Indra), 3) Īśvara (Lord), 4) Ugratejas (Ferocious Energy), 5) Ūṣmākara (Warm Form), 6) Ripughnaka (Destroyer of Enemies), 7) Nirīha (Desireless) and, O god, 8) Liptāṇga (Smeared Limbs), 9) Līna (Merged) 10) Mastaka (Head), 11) Ekāmraka, 12) Aindra and then 13) Oghavāha (Transport of the Current), 14) Auṣadhi (Medicinal Herb), 15) Tamravarṇa (Copper Colour), the one called 16) Visarga (Emission) who is supreme, 17) Anagha (Sinless), 18) Kanthakāra (the Patch Quilt Maker), 19) Gopāla (Herdsman) and then 20) Apasmara, 21) Vyoma (Sky), the one called 22) Vakra (crooked), after which comes 23) Cchedaka (Splitter), 24) Janmadāhaka (Burner of Re-birth), 25) Ṛṣi (Sage), 26) Auttara (Northern), 27) Taṅkaṭha (Axe), 28) Aṇḍadeha (Egg Body), 29) Caṇḍavara (Most fierce), 30) Uttāna (Expanded) along with 31) Dṛḍhakarṇa (firm Ear), 32) Pāṇḍu (White), 33) Dāmana (Subjugation), 34) Dharmārambha (Beginning of Dharma), 35) Nala, 36) Palitānta (End of Wrinkles), 37) Puṁskṛta (Man Made), 38) Bṛhadvakṣa (Broad Chest), 39) Bhavāṇḍa (Egg of Phenomenal Being), 40) Mata (Doctrine), 41) Ahlāda (Joy), 42) Yamāntaka (Destroyer of Death), 43) Raktākṣa (Red Eyed), 44) Lambabāhu (Long Arms), 45) Vakṣāyata (Wide Chest), 46) Śaśi 47) Śaṭha (Cheat), 48) Samādhi (Concentration), the one called 49) Haṁsa (Gander) and then 50) Kṣapāntaka (Destroyer of Darkness). (9cd-15)

These, indeed, are the guardians of the field (all of) whom are said to have Kaula names. O Lord of the gods, the best of adepts should know that they are without number. (16)

They are all like dark blue collyrium and their eyes are long and red inside. They are ecstatic (*unmatta*) and, troubled (by passion), they all drink the wine of grapes. (17)

They are adorned with garlands of human heads and a beautiful (*vicitra*) skullcap. The lotus garland they wear on their heads is made of (the heads of) Brahmin corpses (*mahāśava*) and they are dear to the Yoginī. (18)

Praised by the heroes, they are their lords and are seated on the backs of ghosts. When, in the course of worship (*pūjā*), animal sacrifice (*bali*) is offered, all of them bestow boons.[2] (19)

O god, there is no doubt that as long as the ritual procedure concerning the guardians of the field is unknown, (even) adepts are faced with (great) obstacles (20)

Initiatory Names

Śrīnātha said:

O Bhairavī, by your grace I have known (who) the guardians of the field are. Now in order to benefit (our) disciples tell (me) the list of names (that may be given to) an initiated disciple. (21-22ab)

The venerable (goddess) Vakrā said:

(Thus), O god, I have told you (their) letters and names. They should not be told or given (freely). (I have) revealed them out of love for you. I was not (the first) to declare them but (I) have heard (them) from the mouth of Himavat. One should know that they bestow (both) liberation and worldly enjoyment and (great) boons to (all true) disciples. (23cd-25ab)

The Practice of the Rule (*samayācāra*)

Śrīnātha said:

O goddess, I have heard everything, including the (procedure for) consecrating the disciples. Now I want to hear about the characteristic mark of their Rule. (25cd-26ab)

The venerable (goddess) Vakrā said:

O god, listen, I will explain the practice of the Rule. The list of (possible) names (that can be given to) an initiated disciple has been revealed. After this, one should make him hear the Rule (in the way) I am about to explain (to you).[4]
(26cd-27)

This is the (forty-seventh) chapter called the *Description of the Practice of the Rule* (*samayācāra*). It belongs to the primordial descent into the great sacrifice of the Churning Bhairava in the tradition (*anvaya*) that consists of seventy million (verses) that has emerged on the Path of Meru and (extends) for more than a hundred thousand quarter (verses). It has been brought (down to earth) into the first sacred seat along the path of the Seat of Knowledge (*vidyāpīṭha*). It is the ultimate purport of the Subsequent Six Thousand (verses) of the Pure Division (*vimalabhedottaraṣaṭka*) in the division beginning with `Kā' in the venerable scripture of twenty-four thousand (verses) (known as) the *Svāminīmata* of the Supreme Lord's command as uttered within the Tradition of the Mother (*avvākrama*).

NOTES OF THE SANSKRIT TEXT OF THIRTY-ONE

1. All MSs except घ्, छ्, ज्, झ्: कुतागमं–
2. ख्: –वि *; all other MSs: विधि
3. घ्, छ्: अधुना 4. घ्: –मिच्छामिः
5. क्, ख्, ग्, ज्, झ्: –पानंतरं; घ्, छ्: –दानंतरं. DS.
6. झ्: पूजा–आगमण्डलं. Note the hiatus in this compound. See above, note to 3/77d. 7. घ्, छ्: –शव्द; झ्: दीक्षशव्दं. M → N.
8. छ्: श्रीवक्रो वाच 9. घ्, छ्: दीक्षाते 10. All MSs: –धर्मित्वा
11. M → N. The word वेध– is treated as neuter throughout the following passage as it is generally in this text. But cf. 31/35c where it reverts to its regular gender. 12. छ्: थाने 13. M → N.
14. All MSs: पुत्रकं चैव 15. छ्: श्रीवक्रोवाच 16. घ्: –कान्; छ्: –कान्न
17. IM 6. 18. छ्: –ठेन 19. क्: चांजल्पा; all other MSs: चाजल्पा 20. छ्: वेधितश्चा–. विद्धः would be correct. The same deviant form occurs above, in 5/34d.
21. क्: संक्रान्ते–; all MSs: –विज्ञान 22. All MSs: क्रमोघः–. See 1/4b and note.
23. झ्, च्, छ्: प्रमुक्ता–; all other MSs: प्रमुक्त–
24. All MSs except क्, ज्: ऊर्ध्वं–
25. The following passage up to 31/26 is drawn, with modifications, from the *Kulagahvaratantra* which is quoted in TĀ 29/239cd-254ab and commentary. Refer to the notes of the English translation for variant readings and other details.

The word *vedha-* is masculine. Abhinavagupta takes care to maintain its regular gender. (he writes, for example, नादवेध उदीरितः (TĀ 29/244b) and शाक्तवेध उदाहृतः TĀ 29/247d). In the verse quoted by Jayaratha from the *Kulagahvara* in his commentary on TĀ 29/239cd-240ab *vedha-* is neuter, as it is here. One wonders whether the Tantra Jayaratha refers to oscillates between the regular gender and neuter, as ours does (see above, note to 31/5b) or whether he also sometimes cleans up the Sanskrit of the passages he quotes. Thus, for example, the passage quoted below from the same source (see notes to the translation of 31/12cd-14ab), ends with मन्त्रवेध उदाहृतः instead of the expected deviant neuter मन्त्रवेधम् उदाहृतम् as we find in our text (cf. 31/14b). 26. छ्, ज्: ध्याये; KuGa: ज्वालाकुलं ततो ध्यात्वा

27. KuGa: अष्टारं 28. All MSs: द्वादशाराथवा
29. All MSs: विन्दु 30. ज्: प्रवोद्वव्यं; छ्: प्रवद्धव्यं; all other MSs: प्रवोद्धव्यं
31. Missing in MS झ् from here to the beginning of verse 31/18. 32. All MSs: –प्रभम् 33. IC. IM 5.
34. घ्, छ्, ज्, झ्: संवोधयेश्चैव; all other MSs: संवोधयश्चैव
35. छ्: शक्तं. तदा भवति, or the like, needs to be added to complete the syntax.
36. All MSs: शक्ति 37. छ्: समच्चार्य 38. छ्: –चारण
39. छ्, ज्: –नस्थां 40. All MSs except झ्: –चारा
41. छ्, ज्: वध– 42. All MSs: –महावेग
43. All MSs except क्: शक्ति 44. ख्, ज्, झ्: पदं–; ग्: पञ्चं–; घ्, छ्: पद–
45. ज्: पयतत्वाच्च 46. All MSs except झ् : –पञ्चक
47. दक्षिणे 48. छ्: निवृर्त्तिका
49. All MSs: –रां 50. Missing in MS छ् 51. क्, ख्, ग्: विराजिते

52. All MSs: परमात्मा 53. घ्, छ्: बोधका 54. छ्: –वधन्
55. All MSs: सस्फुरंकादिभेदे 56. All MSs: लक–. घ्: –पादाध्वयाद्धृतं; छ्: –पादाध्वयाद्धृतं; all other MSs पादांधयोद्धृतम् 57. छ्: प्रयन्नत: 58. छ्: गुह्या
59. छ्: क्षीरे 60. छ्, ज्: चिन्ते 61. All MSs: सुरेशाने
62. M → N. 63. M → N. See above, note to 6/133a.
64. क्: –व्या; छ्: मन्ताव्यो 65. All MSs: भाव– M → N. 66. छ्: एतन्
67. गोपनीयम् is the regular form.
68. क्: –र्द्धण् ताम् is required to complete the syntax.
69. IC. To agree with प्राणम् (M → N, see above, note to 6/133a) the correct form would be बिन्दुरूपिणम्
70. The root विश is normally 6 P. All MSs: –लक्षलक्षिताम्. The order of the words in this compound has been reversed. 71. छ्, ज्: –प्रादशे
72. छ्, ज्: –शक्ति 73. Missing in MS झ् up to मुहूर्त
74. All MSs except घ्, छ्, झ्: –कोकारे
75. All MSs except ख्: सुसूक्ष्मा 76. All MSs except क्, ग्, झ्: ज्वलन्ती
77. छ्: –रध्रेषु 78. IM 5.
79. यदा would make better syntax but does not fit the metre. 80. झ्: तदोत्पद्यते
81. Missing in MS झ् up to the beginning of verse 31/35.
82. ख्: एतत् ते; घ्, छ्: एतते; all other MSs: एनते
83. All MSs except क्, ग्, झ्: पतने. The root पत् is normally 1P. See above, note to 6/201b.
84. All MSs except क्, ख्, ग्: तेन; all other MSs: तेना
85. व्याप्त– is the regular form.
86. Notice that here the word वेध– is in its regular masculine gender. Cf. 31/5a. 87. छ्: उन्मा–; all other MSs except ख्, घ्, झ्: उन्मनान्त 88. All MSs: मन:
89. छ्: –नातिकं 90. छ्: –णी 91. छ्: शक्तिर्मेरो
92. ख्, झ्: –घट्ट 93. छ्: –सुय्यान्ते; ज्: ससि–
94. Cf. above, 28/154d and see note to 3/74b.
95. All MSs: भित्वा–; all MSs except क्, ख्, ग्: हत
96. झ्: लिर्गता; all other MSs: * निर्गती 97. All MSs: सुसूक्ष्मा
98. All MSs: परा 99. All MSs: –कारा 100. ज्: यावत्
101. All MSs: गता 102. All MSs: तल्लयं च कृतात्मानं
103. छ्: –द्वला 104. छ्, ज्: –दूर्द्धरन्ध्रेण
105. घ्: मध्येण् छ्: मध्येकामा– 106. All MSs except घ्, छ्: –ज्ञानदवकि
107. ज्: मा 108. ख्, ग्: –मध्य 109. All MSs: बिन्दु
110. ख्: भेदयते 111. ज्: –सी 112. All MSs: –संघारी
113. छ्: –कृतनी 114. छ्: –नामतं; all other MSs: अतीतानागतं
115. All MSs: वर्तमानं 116. छ्: योनिनां; all other MSs except क्, ग्: योगिनां 117. घ्, छ्: –मासान्यो; all other MSs –सामान्यो
118. क्: तर:; all other MSs: नर: 119. क्: तस्योर्द्ध 120. All MSs: –वन्दिते
121. The deviant form खगमा functions here as an action noun and as an epithet of the goddess in the next line.122. छ्: –श्चेव
123. छ्: –खममध्यगे; all other MSs: –मध्यगे 124. छ्: स्वस्वरूपा
125. घ्: खट्प्रकारा; all other MSs except छ्: पद्यकारा 126. क्, घ्, झ्: ला
127. क्, ग्, ज्, झ्: सुषुप्ना; all other MSs: सुषुप्ता

128. घ्: सात–; छ्: सानरूपिणी; all other MSs: व्यात– 129. See 14/12a, note d.
130. All MSs: सिद्धाश्चैव 131. छ्: गतोर्द्धे; all other MSs: ततोर्ध्वे
132. All MSs: –मालाद्या 133. All MSs: युफलम् 134. छ्: प्रयन्ना; ज्: –ना
135. छ्: –गीन्द्रो 136. All MSs: –च्छक्तिरु–137. छ्: –रा *ये
138. घ्: सर्वत:; छ्: सर्व्व * ता 139. घ्, छ्: अनादिवोधमालया; all other MSs: अनादिर्वोधमालया. `M' has been inserted between the last two consonants of this compound for the metre. See above, note to 3/21b.
140. All MSs except घ्, छ्: स्वनन्तं. Missing after here in MS झ् up to नित्ययुक्तात्मा. 141. झ्: IM 6. 142. छ्, ज्: साश्वतं
143. क्, झ्: कुवम् 144. All MSs: व्यापितं 145. All MSs –रूपन्तं
146. All MSs: अनंतानाथना– 147. छ्: ध्याये 148. छ्: ख्यान्तं
149. छ्: –ण 150. Here, as often happens, the indicative pronoun agrees with the predicate, not with the predicated as regular syntax requires. 151. All MSs except ख्, घ्: यावच्छक्त्य; छ्: यावच्छाक्त्या 152. The root ईक्ष् is normally 1A.
153. All MSs: चरणा 154. छ्, ज्: विनि:क्रान्ता
155. क्, ख्, ग्: –मया; ज्: –मपा 156. Here पश्यते is equivalent to दृश्यते
157. छ्: –कलिका– 158. झ्: विन्दु–; all other MSs: बिन्दुं–
159. All MSs: प्रविशे 160. छ्, ज्: द्धृदयान्तस्था 161. DS.
162. छ्, ज्: –तां 163. क्: ऊर्द्ध
164. The root सृप् is normally 1P.
165. All MSs: तंतु. M → F.
166. The optative here has the sense of the present indicative.
167. छ्: –रन्ध्रातगोचरे 168. All MSs: शव्दं–
169. घ्: –कृति; छ्: ननाकृति; ज्: नना– 170. छ्, ज्: विनि:–
171. क्, ग्: मा 172. See above, note to 3/52c.
173. ख्: निर्धूमागार– 174. घ्, छ्: निर्व्वाणां. Here again a feminine noun has been formed simply by adding a long 'a' to the noun stem.
175. घ्, छ्: –खा 176. All MSs: वाहि–. In this text hiatus of this sort is not uncommon even within a compound although it is generally avoided. Thus the text has been emended accordingly and the hiatus maintained. See above, note to 3/77d. 177. घ्, छ्, ज्, झ्: –ता: 178. All MSs: –निश्वास–
179. तम् here replaces तत् 180. क्: –प्ये 181. छ्, ज्: –चक्षुदिव्यतेजो
182. All MSs: निभा–. Cf. above, 28/154d and 31/38b and see note to 3/74b. A verb is required here and the syntax should be made accordingly.
183. All MSs: प्रविष्टा– 184. ख्: कर्ता 185. All MSs: दिव्य
186. All MSs: क्षुरुते 187. घ्, छ्: वल्लीनां; all other MSs: वल्लीनो. I assume in making this emendation that a plural ending has replaced the required nom. sing. for the metre. See above, note to 4/3c.
188. छ्, ज्: रन्ध्रत्रयेण 189. छ्: मश्यते. Although पश्यते is a passive form equivalent to दृश्यते (Cf.31/57c), its object is not in the nominative but in the accusative as if it were the object of an active verb.
190. क्, झ्: जेतेज–. तेजोवर्चसम् would be correct but produces a fifth long syllable. See above, note to 4/11d. 191. छ्, ज्: –येत

192. All MSs except ख्, छ्, ज्: कवम्वाकारे–. कदम्बगोलकाकारे is meant here but does not fit the metre. But even this unsyntactical division of the compound entails an irregular fifth syllable.
193. All MSs: भित्वा 194. See above, note to 2/8b.
195. All MSs: –कानना. N → M. 196. छ्: चेधं
197. All MSs except घ्, झ्: जा–. See above, note to 6/134d.
198. घ्, छ्: वालना–. A dual number is required here. See above, note to
5/46d. 199. छ्: कन्य 200. छ्: तडिन्न–; ज्: तडिन्वरल–
201. छ्: आनि; ज्: न्यानि 202. ख्, छ्: मानवा
203. घ्: –खंडिता:; छ्: प्राप्तोत्यखण्डिता:; all other MSs: –खंडित
204. छ्: दिव्याज् 205. This, as well as the other nouns in this
line, should be in the nominative not accusative. 206. ज्: मातृकांस्तथा
207. All MSs एतेभ्यो 208. All MSs except घ्, छ्, ज्: वरानने
209. छ्: फलो 210. ज्: नोये 211. छ्: किंचि
212. छ्, ज्: भवनान्तरं 213. All MSs: निग्रहे निग्रहं
214. M → N. Notice how the word वेध– is treated variously as neuter and
masculine in this passage. 215. छ्: विग्रह
216. छ्, ज्: अर्कणे, all other MSs: अर्कणै 217. ख्: वार्जकं
218. छ्: खाद्योतेन 219. छ्: द्योतिरूपं. See above, note to 3/52c.
220. क्, ख्, ग्, ज्: महातादेशं; all other MSs: महानादेशं 221. All MSs: –वेधस्
222. छ्: नानाश्चर्य–. नानास्वर्यं–. IC. 223. All MSs except क्, झ्: –गर्भे तथा
224. छ्: हक्वा; all other MSs: हक्का
225. क्, ज्: –जाल; all other MSs: जाले
226. This same deviant *dvandva* is found above in 3/92a.
227. घ्, छ्: प्रथवेत् 228. A dual number is required here. See
above, note to 5/46d. 229. The meaning here appears to be: यदा पदं
नासिकान्ते प्राप्तं भवति तदा. . . 230. All MSs: –पासाणा:
231. See above, note to 6/10b.
232. All MSs except घ्, छ्: वरानने 233. All MSs: स च
234. घ्: –विधो 235. छ्: * * लक्षस्तु 236. झ्: योजितं
237. This *pāda* is one syllable too long. M → N. See above, note to 1/1c.
238. घ्: सजातं 239. All MSs: –धर
240. क्: –नाथेण् Note how the proper names in this list oscillate between
masculine and neuter. 241. घ्: –कण्ठ; all other MSs except ख्, छ्, ज्:
–कण्ठो; 242. ज्: रुष्णि– 243. क्: –मोडीशचर्यायं; all other MSs except झ्:
–मोडीशचर्योयं. See above, note to 2/28b. 244. छ्, ज्: सादा–
245. घ्, छ्, ज्: नवनाभ– 246. M → N. See above, 3/49a. Cf. above,
3/8d. 247. IC. यान् would be correct. 248. छ्: –पये 249. घ्, छ्, ज्: देवा
250. घ्, छ्: + हि 251. घ्: पचे–. all other MSs except घ्: –वार्णवम्
252. घ्: क्रमान्त 253. घ्: चे
254. घ्: यग्ममष्टादशैर्भेदै; छ्: यग्म–. Cf. 29/35c and note to 3/108b.
255. All MSs: –मार्ग 256. All MSs: अग्न्या
257. All MSs: न दह्यते सोहि 258. घ्, छ्: नादकै; ज्: नादके
259. छ्: स्त्रियते; ज्: सृयते 260. छ्: व
261. छ्: दृस्यति; all other MSs: दृश्यति 262. छ्: जंस्वभि:

263. The root भुज् is 7U, भुनक्ति or भुंक्ते would be correct.
264. छ्: दिव्यरूप: 265. See above, note to 3/119d.
266. छ्, ज्: वेधोयं 267. ख्: प्रोक्ते; घ्, छ्: प्रोक्तं 268. M → N.
269. छ्: रचनांकुलां 270. All MSs: मुक्तिस्तु 271. छ्: कमला * रां
272. IC. 273. छ्, ज्: वेधयेच्च
274. सर्वध्यानानामशेष आणाम् would be make correct syntax, but is too long for
the metre. 275. The root ज्ञा is normally 9U so the जानाति
or जानीते would be correct but both alternatives involve a long fifth syllable.
276. ग्: कौलांगमी– M → N. Cf. 1/3d and note. 277. All MSs: ब्रह्म:
278. छ्: –दित्यो 279. घ्: वहि:; all other MSs: वहि
280. All MSs: यमं 281. छ्, ज्: धर्मं
282. छ्: मरुत; ज्: मरुतं. The nominative singular of मरुत् is normally मरुत्.
283. See above, note to 3/15d.
284. छ्, ज्: भविता तारणार्थाय; all other MSs: भविता
285. क्, ग्: अवतीर्णा; all other MSs: अवतीर्णो 286. All MSs: –च्चेर
287. पारस्य 288. All MSs: अयं 289. घ्: अग्रजन्मां; all
other MSs: अग्रजन्मा. Cf. 5/47a, and see note to 3/22b. 290. M → N.
291. All MSs except घ्, छ्: एवा 292. The order of the first two words of this
compound has been reversed. 293. छ्: यद्दिच्छे
294. See above, note to 5/3d. 295. See above, note to 4/38c.
296. छ्: श्रीवक्रोवाच 297. छ्: मारतरं
298. छ्: षड्तृंशडंगुलाधाराद्. षड्तंशदंगुलाधारा. DS. 299. All MSs: पशु

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-ONE

1. Similar definitions of initiation are found in virtually all the manuals and Āgamas of the Siddhānta and indeed in Tantras of all schools. Most of these definitions are in the form of didactic etymologies of the roots *dā* 'to give' and *kṣa* 'to destroy'. Abhinavagupta also says that these are the defining characteristics of initiation (*dānakṣapaṇalakṣaṇā dīkṣā* PTv p. 14). Similarly, Kṣemarāja defines initiation as 'the destruction of the fetters and the bestowal of Śiva's plane' (comm. SvT I p. 13). Brunner has collected examples of such definitions from the Siddhānta Āgamas (see SŚP III p. 3-4). Four out of five of them agree with our text that what is given (*dīyate*) by initiation is the essence of knowledge. Similarly, what is destroyed is bondage. This is variously described as the 'cage of sin' (*Suprabheda*, *caryāpāda,* 4/1cd), the three impurities (*Cintya,* T. 14, p. 338, AVS, T. 7, p. 77), the latent trace of karma (*Mṛgendra*, *kriyāpāda*, 8, comm. on the first verse) and that of the fetters (comm. SvT 5/88a). It thus purifies the Self (*Mṛgendra* ibid.) and bestows knowledge (AVS ibid.). Abhinavagupta quotes a similar verse from the Siddhāntāgamas which says: 'Initiation is said to possess the attributes of giving and destroying. It gives the essence of knowledge and destroys all impurity by piercing (the soul) with awakened consciousness (*bodhānuvedha*)' (PTv p. 14).

The Kaula Tantras agree with the Siddhānta. The *Kaulārṇavatantra* declares: 'As the touch of purified and processed mercury changes iron into gold, so does the soul touched by initiation become Śiva . . . Initiation burns away all Karma. It severs the bond of Māyā and bestows the attainment of supreme knowledge. The adept is thus freed from the seeds of Karma (*dagdhabīja*) and attains Śivahood'. All Śaiva and Kaula schools agree that the individual soul acquires knowledge to the degree in which he is purified of the fetters that limit his consciousness. This is the function of initiation. As Kṣemarāja explains: 'The one Great Light of the blissful Bhairavic fire burns the series of forests of evil bonds, by virtue of the activity of the knowledge (imparted by) initiation' (SvT intro. verse to chapter 4). Higher spiritual states are attained according to the degree in which the soul is purified. Thus Abhinava states that: 'initiation is a process whereby the principles of existence are purified (thus) it is the means of attaining Śivahood' (TS p. 3). Jayaratha explains that it is 'a process of imparting real knowledge and preceptorial instruction that removes the bondage of the fetters. Such benediction and benevolent action is called initiation' (TĀ vol. I (KSTS), p. 80). Initiation is not only essential in order to practice the recitation of mantras or perform rituals, it is also a prerequisite for the practice of Yoga (*na cādhikāritā dīkṣāṁ vinā yoge 'sti śāṁkare* – comm. TĀ 4/42).

However, although the Kashmiri teachers agree that initiation is essential, they also maintain that it may take place through direct insight into the nature of ultimate reality. Combining the point of view of the Bhairava Tantras with the Kashmiri Doctrine of Recognition (*pratyabhijñā*), Abhinavagupta explains: 'Moreover, initiation is nothing but knowledge. One can say that the Hero who has penetrated into supreme consciousness or the Yoginī whose nature is everywhere and always present, receives initiation by virtue of the grace of the absolute 'I' whose principle is Lord Bhairava' (PTv p. 259-260). If sound insight (*sattarka*) develops in the sincere seeker, he is initiated directly by the goddess of his own consciousness (*saṁvitti*) (TĀ 4/203). Ultimately Kashmiri Śaivites maintain that this capacity for recognative insight (*pratyabhijñā*) into the true nature of reality is a faculty that enables a person to attain the state of realisation without initiation (TĀ vol. I (KSTS), p. 80). This is because it is immediate, direct insight that requires no practice or means to realisation (*anupāya*). According to the Kubjikā Tantras this condition beyond practice is the highest Śāmbhava state (see intro. vol. 1, p. 435 ff.). Concerning *Śāmbhavīdīkṣā* see Bharati 1975: 156-157 and for this and other types of initiation Banerjee 1978: 18-20.

2. As Kuṇḍalinī moves up or down through the body along the axial channel of Suṣumṇā, she pierces through the centres she encounters on the way. Accordingly her movement may be referred to as the act or process of piercing (*vedhakrama*). The teacher brings this about in his disciple's body in the course of his initiation. Subsequently, the disciple practices so that this may continue to take place within him independently. There are many kinds of 'piercing', just as there are many ways in which Kuṇḍalinī can rise. Rāmakṛṣṇa, the great Bengali saint and Tantric adept, once described his varied experience of the rise of Kuṇḍalinī, what he called, the Spiritual Current, as follows:

> Sometimes the Spritual Current rises through the spine, crawling like an ant. Sometimes, in *samādhi*, the soul swims joyfully in the ocean of divine ecstasy, like a fish. Sometimes when I lie down on my side, I feel the Spiritual Current pushing me like a monkey and playing with me joyfully. I remain still. That current, like a monkey, suddenly with one jump reaches the *sahasrāra* [the highest centre]. That is why you see me jump up with a start. Sometimes, again, the Spiritual Current rises like a bird, hopping from one branch to another. The place where it rests feels like fire. It may hop from *mūlādhāra* [the Root Centre] to *Svādhiṣṭhāna*, from *Svādhiṣṭhāna* to the heart, and thus gradually to the head. Sometimes the Spiritual Current moves up like a snake. Going in a zigzag way, at last it reaches the head and I go into *samādhi*. A man's spiritual consciousness is not awakened unless his Kuṇḍalinī is aroused. (N. 1969: 829)

3. The question concerning the four stages of life is a restatment of the previous two questions. Concerning the four stages of life and for a comment on this verse, see intro. vol 1, p. 486 ff..

4. According to YKh (1) the four types of initiates are as follows:

The *samayin* is (initiated) by means of the stick to clean the teeth, the *sādhaka* with a handful of flowers, know that the *putraka* is one has undergone the piercing (*vedhika*) and the teacher (is ordained) by consecration (*abhiṣeka*). Awakened to omniscience, he is like Śrīkaṇṭha himself. One should not think otherwise. Śrīkaṇṭha is the teacher.

(The *samayin*) is established in the Rule and exerts (himself) in what is (well) done. He is beloved in the teacher's clan. He possesses the tranquil arising (of knowledge) and the Rule. He is a renouncer and is detached. He is free of thought and is well hidden. Such is said to be the *samayin*.

(The *sādhaka*) is devoted to the (teacher's) clan. He has conquered anger. He eats what he has begged and is free of desire. His sole refuge is the teacher, he is a renouncer, very labourious and pure. He delights in (spiritual) skill and speaks well. He accomplishes mantras and *mudrās*. Such is the most excellent *sādhaka* that by (his) look (*dṛṣṭi*) he purifies from sin.

O god, (the *putraka*) always abides like a son in the Kula of eight Yoginīs and in (his spiritual) clan (*gotravarga*) his form is fashioned by the deposition (of mantras). He is intent on the rites (*anuṣṭhāna*) and, a hero, he observes the vows and conduct (*caryā*) (of a Kaula). He should be known to be a *putraka.* By seeing (him) sin is removed.

5. The following chapter deals with the qualities of a good teacher and the defects of a bad one.

6. There are two types of initiation. One follows the pattern of initiation generally found in most Siddhāntāgamas. This involves a progressive purification marked by a gradual ascent from the lower, grosser states and world-orders of the Six Paths (*ṣaḍadhvan*) of the cosmic, metaphysical and sonic orders of manifestation (see intro. vol. 1, p. 460) up to the highest where the teacher conjoins his disciple with Śiva and so attains a condition called *Nirvāṇa* (lit. 'cessation') in which all impurities and limitations cease. Our text calls this the Initiation by Means of the Principles (*tattvadīkṣā*) (33/18cd-19). This form of initiation is outlined in chapter thirty-three from verse 56 onwards. The teacher can also impart another type of initiation that does not involve the contemplation of the Six Paths. This takes place by what is called 'Yoga' (33/53cd-54). Jayaratha has defined this process as 'the penetration (*bhedana*) of the Wheels (*cakra*), supports (*ādhāra*) and the rest by the upward movement of the energy of the central vital breath (*madhyamaprāṇaśakti*)' (comm. TĀ 29/236). Accordingly it is called the Initiation by Piercing (*vedhadīkṣā*). In its most elevated form this type of initiation gives immediate realisation (*sadyaḥpratyayakārikā*). Other less elevated forms take place in stages. However, these are rapidly attained. Thus Abhinavagupta (TĀ 29/236) explains that:

> The master who has realized perfection by means of Yoga should perform for one who desires immediate worldly benefit (*bhoga*), the initiation by piercing (*vedhadīkṣā*) that immediately bestows all the desired fruits.

This second form of initiation is typically Kaula. It finds little place in Siddhānta Śaivism. Even so, the aim, means and goal of attaining it are the same, namely, the freeing of the soul from the fetters that bind it. Thus Jayaratha (in his comm. on TĀ 29/236) quotes a Tantra as saying that: ''piercing' is the instrument by means of which the fetters are detached (from the soul) (*pāśaviśleṣakaraṇa*)'. Due to the intensity of the energy that penetrates the neophant suddenly and with great force, in the course of this form of initiation he swoons and manifests other striking signs (*pratyaya*) that this process of 'detachment' is taking place. It is this initiation, in its most intense form, that the goddess herself receives and imparts to her consort Bhairava.

7. Our text distinguishes between two levels of piercing. The first is the Lower Piercing (*adhovedha*) (expounded from verse 31/13 to 31/35ab) that

commences from any of the three Wheels below the Heart, namely, those of the Foundation (*ādhāra*), the Self-supported (*svādhiṣṭhāna*) or the City of Gems (*maṇipura*), and moves upwards. Although called 'lower' this type of piercing leads to the same supreme state as does the other level of piercing, namely, the upper one (*ūrdhvavedha*). The sequence through which the Wheels are pierced by the 'upper' form (expounded in verses 35cd to the end) is more complex. The teacher initially fixes his attention, and with it that of the disciple, in the Transmental. Although this is the culmination of the process, at this level, it is also the point of departure. The pervasive, spiritual energy that develops from that is then made to ascend again so as to establish it ultimately and definitively in the supreme state.

We should be careful here not to misunderstand the text. Both forms of piercing are upward. The energy of the, Transmental does not pierce the Wheels by first moving downwards to then ascend again in the same manner. It develops into the pervasive condition of the Equal One (*samanā*) and the Pervasive (*vyāpinī*), which are its modality, rather than lower forms. In this pervasive state it stimulates the upward movement of the energy of Kuṇḍalinī that pierces upwards, as it does in the lower modality, through the Wheels. Herein we have find the distinction between possession by demons or other supernatural beings and the piercing that leads to entry into the higher states of consciousness and Being. Both 'possession' and 'entry' are denoted by the same Sanskrit word *āveśa*. It is derived from the root *āviś* of which the relevant meanings are – 'to go or drive in or towards; to approach, enter or to take possession of'. The *āveśa* that takes by the upward movement of energy is spiritual and uplifting. That which takes place by a downward movement of energy is quite the opposite, demonic and degrading. As Abhinavagupta explains:

> The initiation by piercing is of many kinds and has been described in various places (in the scriptures). It should be performed by (a teacher) who is well practiced (in Yoga) by whom the disciple is made to enter to ever higher (levels). (Thus he) certainly comes to experience the transition through the Wheels by virtue of which (he acquires) the yogic power of atomicity and the rest. If instead, as is stated in *Ratnamālātantra*, (he does) not attain the planes of the upper Wheels that (same so-called initiation) is (just) possession (*āveśa*) by a demon (*piśāca*). TĀ 29/237-239ab

By way of explanation Jayaratha quotes a Tantra, probably the same *Ratnamālā*, as saying:

> If those, O fair faced one, who are in a low state progress upwards that is the state of the plane of liberation and the vessel of knowledge. (But) if those

whose state is that of the upper Wheels move down, then that is (the condition of) possession by a demon and is the cause of obstruction.

See above, 7/43cd-44ab.

8. The passage beginning with these lines and ending with verse 31/26 follows with some alterations, additions and omissions, the main source Abhinavagupta utilizes for his exposition of these six types of piercing (in TĀ 29/239cd-241ab and 29/243cd-254ab), which he calls the *Gahvaratantra.* I suppose this to be the *Kulagahvaratantra* to which he and Jayaratha refer several times. See Dwivedi and Rastogi 1987: vol. 1 255, 256, 268 and 270 for a list of these references. Note that Rastogi lists only the ones whose sources are specifically identified. Thus he has omitted some of the references utilized here that, although identifiable as those of the *Kulagahvaratantra*, are not specifically labelled as such. Both Sanskrit text and translation are presented in the relevant places in the English notes.

We begin by noting a change in the penultimate word of the second line of this verse. Our text reads *vedham udāhṛtam* ((This) is said to be 'piercing') whereas the *Kulagahvara* quoted by Jayaratha reads *ṣaṣṭham udāhṛtam* ((This) is said to be the sixth), which he takes to be an implicit reference to an essential relationship between the Six Paths of the other type of initiation and the one by 'piercing', which is also of six types. Thus he writes:

> (The reference) here to the sixfold nature (of the initiation by piercing suggests) collectively the purification of the (Six) Paths (of which it is) the cause. As is said:
>
> O beloved, the sixfold (energy) (*ṣoḍhā*) purifies the Path by the awakened consciousness of piercing (*vedhabodha*).

9. This line does not appear to have an equivalent in the *Kulagahvara*. One wonders whether this practice is specifically related to the series of forms of piercing we are examining. The recitation of mantra, be it as an independent exercise or as part of ritual, at least in the case of the most important mantras recited on that occasion, should anyway be done in conjunction with the breath. Ideally this should take place in such a way that it induces the rise of the energy of the breath to higher levels. In broad terms our texts refer to this process as a form of Gesture – *mudrā*. Although this rise is not always described in terms of a transition through the Wheels it may be. Are we then to understand that in the latter case the dynamics of such *mudrā*s are forms of piercing? Perhaps the distinction here is that the formation of these Gestures are not initiatory, as the many forms of piercing are meant to be. Or, more probably, the distinction is simply one of definition. At any rate the ultimate result and, indeed, the overall

dynamics of these two typologies – *mudrā* and *vedha*, in the sense expressed, coincide in many respects.

10. The equivalent passage in TĀ 29/240cd-241ab reads:

jvālākulaṁ svaśāstroktaṁ cakram aṣṭārakādikam ||
dhyātvā tenāsya hṛccakravedhanān mantravedhanam |

Having visualized the wheel consisting of eight spokes or more, full of flames, as it is described in one's own scripture, the Piercing with Mantra (takes place) by piercing the Wheel of the Heart of (the disciple) with it.

Jayaratha quotes Abhinavagupta's source in his commentary. It reads:

jvālākulaṁ tato dhyātvā aṣṭāraṁ cakram uttamam |
dvādaśāram atho vāpi svaśāstravidhiyogataḥ |
paracittaṁ vedhanīyaṁ mantravedha udāhṛtaḥ |

Then, once visualized the excellent wheel of eight spokes full of flames or else the Twelve-spoked (Wheel) in accord with the procedure (prescribed) by one's own scripture, (the teacher) should pierce the mind of the other (that is, his disciple). (This) is said to be the Piercing with Mantra.

Before examining the variants in our text with respect to this one, which appears to be its original source, we note that Abhinavagupta has also modified the original significantly in one place. The teacher, according to him, pierces the Wheel of the disciple's Heart. Perhaps this should be understood to be the equivalent of 'mind' in the original version. The Heart is generally considered to be the seat of the mind. But this may not be the case because according to Abhinava it is Sound (*nāda*) that pierces the mind (TĀ 29/244a). Perhaps he tried in this way to distinguish between the sphere of operation of the two forms of piercing. Jayaratha appears to endorse this view when he says concerning the Wheel of the Heart: 'the Self, contracted by the object of thought is perceived therein because it resides within it'. Thus, 'mind' here means the individual soul who is conditioned by the objects of his thoughts.

Our text has replaced the eight-spoked wheel of the original, with a six-spoked one. The intention here seems to be to adapt this practice more closely to the Wheels in the body. The Wheel of the Self-supported between the navel and the genitals is said to have six spokes and the Wheel of the City of Gems has twelve. We have seen that according to the Kubjikā Tantras, Kuṇḍalinī can be awakened from either of these two places. She rises up through the central channel with the current of the upward moving breath when the flow of the exhalation and inhalation has been checked. We can assume that this process takes place in both the teacher and the disciple. The energies of teacher and disciple are harnessed together in such a way that when the teacher raises his Kuṇḍalinī, the same occurs in his disciple. In this way, the teacher awakens the mind of his disciple by filling it with the energy of Kuṇḍalinī.

Abhinava continues with the next topic following systematically the order of presentation in the *Kulagahvaratantra* (corresponding to 31/11cd-12ab above). This is the Piercing with Sound, which is missing in our text. This may be simply due to an accidental loss in some stage of its transmission. This may have already occurred in a phase of its redaction. Perhaps the copy of the text the author of this section incorporated into his work was laconic. On the other hand, the patching up we notice in the remaining sections may be an indication that the Piercing with Sound has been omitted on purpose with the intention of making the progression through the Wheels more systematic

Before continuing with his presentation of the *Kulagahvaratantra* Abhinavagupta inserts a short passage from the *Dīkṣottarāgama*. Manuscripts of this text are preserved in the Institut Français d'Indologie in Pondicherry (see Gnoli 1972: 893 who reports that it is the second half of the *Niḥśvāsakārikā*). Although this text is related to the Siddhāntāgamas, it shares traits with the Bhairava Tantras. Several of the passages Abhinava has selected from it describe powerful projections of mantras and seed-syllables onto the body and through its vital channels. This is the nature of the procedure described in the passage Abhinava presents as an alternative method by which the teacher can initiate the disciple in an analogous way to that of the Piercing with Sound. It was taught to him by his Trika teacher, Śambhunātha. Abhinava in one place informs us that one of the depositions it prescribes is also found in the *Siddhayogeśvarīmata* (TĀ 19/21-23ab), one of the most authoritative Trika Tantras.

Gnoli follows Jayaratha who introduces this passage from the *Dīkṣottara* as an alternative procedure for the Piercing with Mantra but this appears to be a mistake. It makes much more sense if read in conjunction with the passage that follows that deals with the Piercing with Sound rather than the one that precedes it. Perhaps I am wrong and Jayaratha did read these two passages together and so it is Gnoli who wrongly believes that the passage in the *Dīkṣottara* refers to an alternative form of Piercing with Mantra (*mantravedha*). Nonetheless, it seems that Jayaratha has not grasped what Abhinava is doing here.

The passage is worth quoting not only because it helps us to understand Piercing with Sound but also illustrates Abhinavagupta's exegetical method. It is as follows:

(I have) seen (the following) procedure taught to me by Śambhunātha in the *Dīkṣottaratantra*. Having deposited the letter Ā nine times (on his own body, the teacher) should transmit it to the disciple by depositing it (on his body), shining and resplendent with flames. Thus (the disciple's) bonds are paralyzed and he is united with the Supreme Principle. TĀ 29/241cd-243ab

Jayaratha explains that this deposition is done nine times because the aperatures of the body are nine. If we read this passage as it stands, the method here seems to be that the teacher penetrates the disciple's body with the sound of Ā after it has been energized by entering into his own pure body. This flaming energy of mantric sound first annuls the power of the fetters that bind the disciple and so, as there is nothing to prevent it anymore, he is united with the deity (cf. below 31/32cd-35ab and 33/181 ff).

Next Abhinava returns to the *Kulagahvaratantra*. He writes:

nādoccāreṇa nādākhyaḥ sṛṣṭikramaniyogataḥ |
nādena vedhayec cittaṁ nādavedha udīritaḥ ||

Translated as they stand, these lines mean:

The (type of piercing) called Sound is (brought about) by the utterance of Sound applied in the sequence of emanation. (The teacher) should pierce with Sound the mind (of his disciple). (This) is said to be the Piercing with Sound.

One can read this passage together with the previous one or independently. Jayaratha chooses the latter alternative and so attempts to somehow align what Abhinavagupta is saying with its original source. However, it appears that Abhinavagupta's intention was to integrate the practice taught in the *Dīkṣottaratantra* with the one in the *Kulagahvaratantra*. In order to do this he omitted a portion of his original source and modified the rest in accord with the compatibility he perceived between the two sources. To see how he did this we must turn to the original text, which Jayaratha supplies in his commentary (Cf. below in 33/126ab-132ab):

After a long Sound has been uttered, Sound should be projected into Sound. After having uttered (the letters of the Mālinī alphabet) beginning with Na and ending with Pha, (the teacher) should purify the Path of the Letters. (Thus) O goddess, (the teacher) should pierce (his disciple) with Sound. (This) is said to be the Piercing with Sound.

Jayaratha comments on the obscure statement that the utterance of Sound should be 'applied in the sequence of emanation' with this passage in mind. Accordingly he explains that 'emanation is (the Mālinī alphabet) beginning with

Na and ending with Pha. The reverse, from Pha to Na is the sequence of withdrawal' (cf. TĀ 15/128cd-129). Again, according to Jayaratha, the kind of Sound with which the teacher should pierce the mind of his disciple is the energy of Unstruck Sound (*anackakalā*) which is uttered spontaneously (*svayamuccaradrūpa*) because, we may add, it is the Sound Absolute. What is meant in the verses quoted in the *Kulagahvara* by the 'long Sound' (*dīrghanāda*)? Jayaratha understands this to be the sound to which Abhinava refers in the phrase 'utterance of Sound' (*nādoccāra*). But he does not tell us clearly what it is, he simply says that it is the 'long seed-syllable of Sound' (*dīrghātmanāda*). So, it seems that there are two Sounds. One is the 'long seed-syllable of Sound' and the other is Unstruck Sound. Perhaps we should understand that each letter of the Mālinī alphabet is conjoined with one or more of the long vowels and projected this way into the disciple's body. When this process is complete, the teacher should pierce the disciple with Unstruck Sound. We are then left with only one more Sound in this passage from the *Gahvaratantra*, that is, the Sound into which Sound is to be projected. At this point Jayaratha abandons us. So we may try an alternative solution. To begin with we may hazard to emend *nādākhyaḥ* in Abhinava's text to *nādākhyaṁ* so that it agrees with *cittam* – 'mind' although, I must admit, this is a little forced. In which case the passage means:

> (The teacher) should pierce with Sound the mind (of his disciple) called Sound by the utterance of Sound applied in the sequence of emanation. (This) is said to be the Piercing with Sound.

Read together with the previous section from the *Dīkṣottara*, bearing in mind that Abhinava had the text of the *Kulagahvara* in front of him, we may suggest that Abhinava used the *Dīkṣottara* to explain this other, more enigmatic text. The 'long Sound' is the letter Ā. Projected through the orifices of the disciple's body his mind reverts to its essential, resonant nature. Once that has been done the teacher projects his own pure consciousness, full of Divine Sound into his disciple. This is in the 'sequence of emanation'. Sometimes the teacher operates in the opposite sequence and withdraws something from within his disciple as, for example, when he extracts his vital Self to conjoin it first with his own and then with Śiva. In order to bring in line the form of Piercing with Sound taught to him by Śambhunātha with that of the *Kulagahvara*, Abhinava may have omitted that part of the procedure that required the projection of the Mālinī alphabet.

11. It appears that the equivalent passage is quoted by Abhinava directly without much, if any, paraphrasis. It reads:

bindusthānagataṁ cittaṁ bhrūmadhyapathasaṁsthitam ||

hṛllakṣye vā maheśāni binduṁ jvālākulaprabham |
tena saṁbodhayet sādhyaṁ bindvākhyo' yaṁ prakīrtitaḥ || TĀ 29/244cd-245

(The teacher may contemplate) the mind (of his disciple) where the Drop is located, that is, between the eyebrows, or else, O Great Goddess, in the target within the Heart. (The teacher) should pierce (his) disciple (*sādhya*) with that Drop, its light (brilliant with blazing) flames. (This) is said to be (the initiation) called (the Piercing with) the Drop.

Jayaratha quotes a verse saying:

After having entered in between either the eyebrows, the heart or the root (centre) by contemplating the Drop, (the teacher) should pierce the mind of (his) disciple by piercing (read *vedhena* for *bhedena*) the Drop.

We begin by noting that the vocative *maheśāni* – O Great Goddess, tells us that the speaker is the god who is teaching the goddess. The inconsistancy that we frequently notice in the form of address of one of the partners serves as a marker that indicates a passage has been imported. It is particularly easy to locate such passages in our text (and they are many) as the speaker is the god of virtually all of the texts that precede it, including the Kubjikā Tantras.

More specifically we notice the change from just 'heart' in the text quoted by Jayaratha or 'target in the Heart' (*hṛllakṣya*) to the 'Wheel of the Heart' (*hṛccakra*) of our text. The change is clearly intentional and significant. The redactor who made it did so with the system of Wheels of his own school in mind. The Piercing with Mantra in the scheme presented here relates, as we have seen, to the Wheel of the Self-supported and that of the City of Gems. The Piercing with the Drop, the next form of piercing according to our text, analogously, relates to the next Wheel, which is that of the Heart. Again, perhaps to make this clear, the redactor omitted the first line reported by Abhinava. The procedure in the original sources allows for forms of 'piercing' in several places within the subtle body. What is essential is that a Drop be located there. The optative particle *vā* – 'or' – of these texts is replaced in ours by the nondescript conjunctive particle '*ca*' – 'and'. There is no question here of any options. This piercing follows from the previous one in our text and takes place in the next Wheel along. Note also that Abhinavagupta identifies these Drops with the mind (*citta*). The implication is that the mind may be located in more than one place.

12. The five lines, 31/15cd-17 correspond to TĀ 29/246-247. Here is the Sanskrit text and a possible translation along with Jayaratha's commentary.

śāktaṁ śaktimaduccārād gandhoccāreṇa sundari |

śṛṅgāṭakāsanasthaṁ tu kuṭilaṁ kuṇḍalākṛtim ||
anuccāreṇa coccārya vedhayen nikhilaṁ jagat |
evaṁ bhramaravedhena śāktavedha udāhṛtaḥ ||

O fair lady, the empowered state (*śākta*) (arises) by the upward movement (*uccāra*) into the possessor of (that) power (in the End of the Twelve induced) by the elevation (*uccāra*) (brought about by the force of the contraction of the) anus (*gandha*). (Initially) crooked and form (round like an) earring (that empowered state) sits on the seat of the Water Chestnut; having uttered that without utterance, pierce the entire universe. (This) is said to be the Empowered Piercing (that takes place) in this way by the Piercing of the Bee (*bhramaravedha*).

Jayaratha explains that:

A state of unity (*sāmarasya*) (between power and its possessor) is achieved within the possessor of power, namely, Śiva who resides in the End of the Twelve by moving upwards. (This takes place) by the upward movement of the energy (of the vital breath) in the centre (within Suṣumṇā) brought about by the force of contracting the anus and other such methods. Unstruck Sound (*anacka*) that is crooked and (its) form (round like an) earring (located) in the Foundation of Birth sits on the seat of the Water Chestnut at one with the energy of the vital breath and (is such) because it is perpetually active (*satatodita*). Uttering (it) without utterance, because it is uttered effortlessly and spontaneously of itself (*svayamuccaradrūpa*), and having attended (to it carefully) (*avadhāya*), pierce through the entire universe within the spontaneous (*svarasika*) utterance of oneself (the teacher) and the other (the disciple). Wandering by going to this and that place, this is said to be the Empowered Piercing.

Before comparing our text with that of the TĀ, we should take note of a point concerning Jayaratha's commentary on this text. This concerns the term Piercing of the Bee (*bhramaravedha*). It is possible that Jayaratha's manuscript reads *bhramaṇavedhena* ('by the piercing of wandering about') instead of *bhramaravedhena* ('by the piercing of the bee') we find in the printed edition. Or else he intentionally understood it in this way and glossed it accordingly as *bhramaṁ dadhānaḥ tattatsthānagatyā* – 'wandering by going to this and that place'. The bee is an ancient symbol of the goddess. The sound of the energy of Mālinī, who is Kuṇḍalinī in her upward moving phase, is that of reabsorption and is like the buzzing sound of a bee (TĀ 15/131cd-133ab). This is the Unstruck Sound of the engulfing energy of the vital breath that moves upwards through the central channel of Suṣumṇā, reabsorbing the gross progressively into its own subtle nature to then ultimately merge all the diversity it has absorbed into the Śiva, the lord of power.

Our text makes no mention of the contraction of the anus that impells the upward movement of the energy of the vital breath. The 'squeezing' or contraction of the anus closes the exit of the downward movement of breath of exhalation (*apāna*) even as it stimulates the upward movement of the 'rising breath' (*udāna*) through Suṣumṇā. This may take place spontaneously or it may be induced as it is in this case by the conjunction of the teacher's vital energy with that of the disciple. It occurs when the adept experiences the emissive state (*vaisargikī sthiti*) of mystical absorption as it does in the moment in which the seed is emitted at the climax of sexual intercourse. In both cases, the breath is suspended and there is a powerful expansion of consciousness in the centre between the channels of the two breaths. The neophant is introduced to this dynamic condition of unfoldment during his initiation. Empowered by the grace he has thus received, the advanced adept who can manage to maintain this state ultimately merges all his lower energies into Śiva through the upward moving current of the energy of Kuṇḍalinī.

The redactor of our text has replaced the reading *kuṭilaṁ kuṇḍalākṛtim* – 'crooked and form (round like an) earring' with – *kubjikā kuṭilākṛtiḥ* 'Kubjikā, whose form is crooked'. Kubjikā is the true identity of Kuṇḍalinī, the energy of the vital breath that 'sits on the seat of the Water Chestnut' which, Jayaratha explains is in the Foundation of Birth (*janmādhāra*) close to the genitals. In the place of the striking sonic symbolism of the TĀ, in our text Light and Fire characterize Kuṇḍalinī and her rise. Mystics of all religions 'see' the deity and its power as Divine Light or 'hear' it Divine Sound or Speech. The two are interchangeable and often come together.

Kuṇḍalinī is described here much in the way the Person (*puruṣa*) is in the Upaniṣads. She, like him is 'the measure of a thumb, like a light without smoke' (Kaṭha 4/13. See above note to 13/77cd-78). The Self is like a flame that burns without flickering in the space within the Cave of the Heart. Similarly Kuṇḍalinī burns in the Caves of the Void in the centre of each Wheel. Each Cave is connected to the next by the subtle filament of Suṣumṇā. Even as she burns in the darkness of Māyā, she illumines the adept's innermost being and fills his body with light to reveal its true cosmic nature. Rising with great force, she finally exits from the uppermost cavity of the body and enters the Kadamba Cave in the End of the Twelve to merge there with her source as does the individual soul she has transported in the powerful current of her upward flow. Thus the adept is instructed that he should, 'with the mind and limbs firm' by virtue of the unfolding of this luminous, vital energy, 'pierce the entire universe' of his body.

The essential paradigm of this and countless similar practices is very ancient. It was well know to the seers of the earliest Upaniṣads who first formulated it as the process of quiting the body at death to never return (see above note to 2/4cd-6ab). The latter Upaṇisads continued to expound it in their own cryptic style. For example we read in the *Yogaśikhopaṇisad* (verses 4 to 7):

Upon one pillar (the vertebal column),
three posts (Iḍā, Piṅgalā and Suṣumṇā),
With nine doors (the nine openings of the body),
having five gods (the five senses),
Stands a temple, body it is,
In it one shall seek the highest.

Therein glows a sun,
With flamelike rays surrounded,
In its midst is a fire,
Which burns like the wick of a lamp;

As large is its pointed flame (*śikhā*),
So large the highest God there.
Practising the Yoga repeatedly,
The Yogin penetrates through the sun.

Then zigzag he goes upwards
Through the shining door of Suṣumṇā;
Breaking through the cerebral dome,
He finally sees the highest one. (Translation by Deussen)

13. This verse is practically the same as TĀ 29/248. One wonders whether to emend *pañcapañcakabhūṣitā* ('adorned with five groups of five') of our text, to *phaṇapañcakabhūṣitā* ('adorned with five serpent hoods'), which is the only variant reading in the TĀ. As this variety of 'piercing' was announced as being (above 31/11cd-12ab) with 'the Snake', this emendation would make good sense. The five energies of the snake goddess Kuṇḍalinī that unfold as she straightens and rises are aptly likened to a serpent's hood that similarly spreads when it raises its up from the ground. However, all the MSs of the KuKh agree on the reading. Moreover, there are, in fact, five groups of five as we shall see in the following verses.

14. Jayaratha explains that the supreme (place) to which Kuṇḍalinī travels is the 'power-holder who is established in the End of the Twelve'. He quotes the beginning and end of a passage from an unknown source, which says:

In this way the goddess with five serpent hoods has emerged from the *maṇḍala* of the foundation. . . . She has reached the Supreme Space (*ākāśa*), the supreme *maṇḍala* of *Nirvāṇa*.

15. The first group of five consist of the five energies (*kalā*) very well known to the Śaiva Āgamas generally as those that make up the Path of the Energies (*kalādhvan*). See appendix 2 of this volume. They are listed here in serial order starting from the highest one. This energy is normally called Śāntyatītā. Here it is called Vyomā.

16. This and the following four are the five most auspicious lunar days (*tithi*).

17. The equivalent of the previous five lines (i.e. 31/19-21ab) is condensed into the following two in TĀ 29/249:

kalās tattvāni nandādyā vyomāni ca kulāni ca ।
brahmādikāraṇāny akṣāṇy eva sā pañcātmikā ॥

(There are) the Energies that (comprise all) the principles, (the Yoginīs) Nandā and the rest, the Voids and the Kulas as well as the causes, namely Brahmā and the rest, which are the senses. Thus she is fivefold.

Although the text clearly states that the goddess is fivefold, Jayaratha understands that there are seven groups of five, not five. Translating it according to his interpretation it means:

(There are five) energies, the principles, Nandā and the rest, the Voids and the Kulas, the causes, namely Brahmā and the rest as well as the senses. Thus she is fivefold.

Jayaratha writes that: 'The energies are the five Śāntyatītā and the rest. The principles are Earth and the rest. Nandā and the rest are the lunar days. The Voids are (in the following) places, namely, (the genital centre) of birth (*janmasthāna*), the navel, the heart, the (place of) the Point (between the eyebrows)'. Jayaratha does not mention the fifth Void. Paramhaṁsa Miśra, in his Hindi translation, suggests the locus of Sound (*nāda*). Jayaratha continues: 'the Kulas are called Mahākaula, Kaula, (Paramahaṁsa Miśra next inserts) Kula, Akula and Kulākula. The Causes, begin with Brahmā and end with Sadāśiva (i.e. Brahmā, Viṣṇu, Rudra, Īśvara and Sadāśiva). The senses are the senses of perception and the senses of action.'

If we combine our text with Jayaratha's explanation of the equivalent one in the TĀ, we can arrive at a reasonable interpretation of both. Our text says of the goddess that she is *brahmpañcakasaṁyuktā* 'conjoined with the Pentad of Brahmā' and *pañcakāraṇasaṁyutā* – 'endowed with the Five Causes'. If we read these two attributive compounds separately there would be six groups, not five.

Moreover, Abhinava confirms that we are right in reading the two together as referring to just one group of five. On the other hand our text suggests that we should read *brahmādikāraṇāny akṣāṇy eva* as a single unit i.e 'the causes, namely Brahmā and the rest, which are the senses.'

18. These two verses correspond to TĀ 29/250-251 which read:

evaṁ pañcaprakārā sā brahmasthānavinirgatā ǀ
brahmasthāne viśantī tu taḍillīnā virājate ǀǀ
praviṣṭā vedhayet kāyam ātmānaṁ pratibhedayet ǀ
evaṁ bhujaṅgavedhas tu kathito bhairavāgame ǀǀ

In this way, (the goddess) with five aspects, has emerged from the Abode of Brahmā and enters the Abode of Brahmā (where) she appears (in the form of) a lightning flash (*taḍillatā*). (She who has) entered (therein) should pierce the body and penetrate through the Self. This is the way the Piercing with the Snake is explained in the Bhairavāgama.

The first line is practically identical to KuKh 31/21cd. An error in the second line becomes evident if we compare it with KuKh 31/22ab. The edition of the TĀ reads *taḍillīnā* which Gnoli understoods to mean 'si dissolve come un lampo' i.e 'she disappears like a flash of lightning'. In the light of our text a better reading would be *taḍillatā* simply 'lightning flash'. Again, the two readings *viśantī* (entering (in)) in the TĀ and *viśrāntā* (reposing (in)) in the KuKh are both informative. According to the version in the TĀ Kuṇḍalinī emerges out of the Abode of Brahmā and enters into the Abode of Brahmā. The former, Jayaratha explains, is the foundation of birth (*janmādhāra*) and the latter the End of the Twelve and says 'the point is that both are (amongst) her many places of residence (*adhiṣṭhāna*).' According to the version in the KuKh, Kuṇḍalinī emerges out of the first Abode of Brahmā and reposes in the second Abode of Brahmā, which is, no doubt, the End of the Twelve. There the process is complete, Kuṇḍalinī rests absorbed into Śiva's infinite being.

As she moves up she pierces through the body even as she traverses and thus awakens the Self. In the process she energizes the five pentads and they assume their place in the cosmic body filled with the energy of consciousness. Within them resides the awakened Self who is full of the same divine power of Kuṇḍalinī who is perpetually engaged in emerging from the lower foundation and travelling up even as she is constantly merging into her upper foundation where she is established in the infinite being of Śiva, the possessor of power. Thus she is both perpetually active (*satatodita*) and ever at rest (*śāntā*). In between these two states, as it were, is the awakened Self who resides in the cosmic body which is illumined and fully energized.

Jayaratha quotes the *Kulagahvara* as saying:

(Kuṇḍalinī) whose form is crooked like a snake resides below the navel. Adorned with five hoods, awakened she moves like a snake. The piercing of the group of five by means of the five (hoods) is called that of the snake.

Other variants are *praviṣṭā* – '(She who has) entered (therein)' – in the TĀ for *pratiṣṭhā* – '(she who is) well established' – in the KuKh. All MSs read 31/22cd *paramātmā ca bodhayet* which has been emended to *parātmānaṁ prabodhayet*.– '(Kuṇḍalinī) should awake the Supreme Self.' The version in the TĀ reads: *ātmānaṁ pratibhedayet* – '(Kuṇḍalinī) should penetrate through the Self'. The two readings support each other very well. Kuṇḍalinī is the power of consciousness (*cicchakti*). To be pierced by this energy is to be awakened by it.

Finally we notice that KuKh 31/23b replaces the reading '*bhairavāgame*' in the source recorded in TĀ 29/251d with '*kulāgame*'. The change reflects an important development. Bhairava Tantras are treated as Kaula. It also reminds us that, as is the case with most other features of Kaula systems, the Kaula form of initiation originally developed in the Bhairava Tantras.

19. The parallel passage in the TĀ omits the lines 31/23cd-24 but there is an additional line before the equivalent of 31/25ab. This was probably accidentally omitted as it is required to complete the sense. It is the TĀ (29/252-254ab) it is as follows:

tāvad bhāvayet cittaṁ yāvac cittaṁ kṣayaṁ gatam |
kṣīṇe citte sureśāni parānanada udāhṛtaḥ ||
nendriyāṇi na vai prāṇā nāntaḥkāraṇagocaraḥ |
na mano nāpi mantavyaṁ na mantā na matikriyā ||
sarvabhāvaparikṣīṇaḥ paravedha udāhṛtaḥ |

The mind should be contemplated until the mind is destroyed. When the mind ceases, O mistress of the gods, (that) is said to be Supreme Bliss. (In that state) there are no senses, no vital breaths nor field of the inner (mental) senses. There is no mind, no object of the mind, no cogitating subject (*mantṛ*) and no cogitation (*matikriyā*). It is said that the Supreme Piercing is devoid of all phenomenal existence (*bhāva*).

Jayaratha explains: (The mind) has ceased by abandoning the condition of thought (*vikalpatā*). Supreme Bliss is aesthetic rapture (*camatkāra*) devoid of thought constructs.

From here Abhinava turns in his TĀ to another series of such initiations and so the KuKh no longer coincide. It is possible that the KuKh continues to draw from the KuGa.

20. Presumably, the centre is the area between the Cavity at the base of Suṣumṇā and the Cavity at the apex. 'Squeezing' from below takes place, I suppose, as before, by contracting the centre at the base of the spine. This pushes Rudra's energy, i.e. Kuṇḍalinī upwards. The 'squeezing' from the top may be the pulsation of the triangle of the Cavity of Brahma at the top of the head or the End of the Twelve, which draws the energy to itself. The centre is where all motion and locations coincide. The centre is everywhere. Kuṇḍalinī rises through 'the centre' and abides there burning with purifying energy (cf. 31/31-32ab).

21. Below (31/81) we are told that by means of the 'firefly' the 'Great Piercing which is Light' takes place.

22. In TĀ 29/258 we find the expression *śaktiśūlāgra*. Jayaratha explains that by '*śūla*' one should understood '*triśūla*'. Thus the meaning is: 'in front of the trident of energy'. The three tips of this trident are Śakti, Vyāpinī and Samanā. Clearly, in that case what is in front of them is the Transmental. This is probably so here also. Rudraśakti is Mālinī who is identified with Kubjikā and Kuṇḍalinī. When the vital breath rests in the centre between the two flows of inhalation and exhalation, placed, as it were, into the 'jar' of breath suspension (*kumbhaka*), it assumes the form of a Point (*bindu*). A pin-point of light, it shines in the darkness like a firefly. One should observe it with one-pointed concentration as it travels up and disappears into the undefinable (*alakṣya*) transcendental Emptiness. The following verse explains that this is the vacuity in the cavities of the body within which the energy of Kuṇḍalinī 'burns fiercely'.

The navel is the place where Kuṇḍalinī begins her spontaneous ascent. Below the navel the movement of the breath is unconscious. It has to be consciously stimulated. This is why, I suppose, Rudra's energy should be 'applied' up to the navel. There Kuṇḍalinī spins like a burning wheel of fire within the Triangle of her energies.

23. Cf. 31/15cd-16.

24. Below we are told that there are three cavities by means of which the individual soul, transported by Kuṇḍalinī, leaves the body (31/68). These are in the heart, the throat and the palate, where the yogi perceives the mind, intellect and ego respectively, from the perspective of the highest reality (31/86). But these are not the only cavities described in the following passage. According to Kuṇḍalinī's varied patterns of ascent and descent they vary. The navel and the Cavity of Brahmā are another two. Indeed, there are cavities in the centre of all the Wheels. Through these 'cavities' Kuṇḍalinī moves in the body and travels out beyond it. From the embodied perspective they are the locations of pockets of Voidness or openings into the one Void. From the point of view of the spiritual energy that courses through the Void of Absolute Being in the 'Supreme Abode' they are all the one Void. The goddess moves from Emptiness to Emptiness through Emptiness. There is only one reality. There cannot be 'holes' in it. The

body with its cavities, Wheels, Supports and the rest are a part of the anatomy of the corporeal 'cloak of Māyā' with which the Supreme Being shrouds himself in the world of duality. However, the covering of Māyā is not complete. Indeed, Māyā is 'incompleteness' itself that seemingly traps Emptiness like a net. The gaps are inevitable and essential. Without them the power of Emptiness could not give life to its emanation. Through the gaps courses the life force – like blood in the veins. Through the holes in the net of Māyā the attentive yogi can look out into the original Emptiness to see how his body, senses, mind and, indeed, the entire world rest and move through Emptiness. He perceives these cavities initially as points of light. He observes them in various places according to the form his practice takes – in the navel and below it, the heart, the uvula at the back throat, the top of the cranium and beyond. Each is a 'centre' in the dimensionless, luminous Emptiness. Essentially Voidness himself, the yogi is naturally drawn into it.

Thus the Void is not inert 'emptiness'. Not at all. It is full of energy, vitality and consciousness, and is the very essence of all that exists. This Absolute is not the Brahman of Advaita Vedānta. It is supremely active. Generating Māyā, it obscures itself by actively repelling the 'other' ignorant of its true nature. Conversely by the 'movement', that is, the activity of its divine power, in the Centre, which is each 'centre', it draws all things to itself and dissolves them back into Emptiness. Then wonderfully regenerated in their authentic Emptiness they are again emitted free of the net of Māya. In the embodied condition this process takes place gradually. According to the intensity with which the power of Emptiness radiates. Drops, streams or even great floods of Emptiness pour out from the one Void. This takes place through one 'cavity' in particular. This is the cavity of the mouth in which hangs what is called in the following passage the Beak of the Crow. Here the yogi drinks, as it were, the nectar of particles of Voidness that flow down to consecrate him in mind and body.

These two phases and the stages in them through which Kuṇḍalinī passes are various. The experience of her inner divine activity is no less varied than her outer activity when she acts as Māyā. So from one point of view Emptiness is pure and simple. It is everywhere uniform; everywhere the same. From another point of view, the processes that operate within it, their phases, locations, forms, energies, principles of existence and much more, are complex, variable, and related to one another in virtually endless possible combinations. Accordingly, the Tantra teaches a manifold of possibilities, each different in detail but all essentially the same process. We have already observed many times that in the Kubjikā Tantras this dynamism is symbolized by the activity and phases of the Moon. As we go through the complex inner processes described in the rest of this chapter, we observe how the New and Full Moon alternate. For example, when the Self penetrates through the Door of Brahmā, at the top of the head, the Full

Moon becomes the New Moon (31/40). The Full Moon is below in the body. Located in the centre of the uvula (*lambaka*) at the back of the throat, replete with its sixteen energies and feed by the New Moon above it, it drips vitalizing nectar below.

Travelling up with great force, Kuṇḍalinī detaches the fetters from the soul and consumes them. This is the phase of withdrawal; the phase of the New Moon in which the Moon decreases as the impurities of the soul and Karma are burnt away. When this process is complete and the energy of the New Moon has reached the 'Upper Place', it rains down the nectar of the Full Moon as it enters the following phase, which is that of emanation. When that phase also reaches completion and the body of the neophent is filled with this divine lunar nectar his consecration is complete (see above 13/139). Concerning the relationship between the Full and the New Moon, see intro. vol. 1, p. 341 ff.

25. This passage should be read in conjuction with 33/181-186. There it is explained that initiation severs the fetters from the individual soul. This is the common feature of both forms of initiation, namely, the form that is effected by purifying the Path and the one by Piercing. It is clear from the context that the latter is meant specifically and that this is more effective and immediate (cf. above comm. on TĀ 29/236 quoted above in note to 31/10cd). An essential preliminary stage of initiation, of whatever kind it may be, is marked by the detachment of the fetters from the individual soul that bind it. When this takes place, the individual soul is freed from the forces that sustain worldly, fettered existence and so, supportless, he tumbles into the transcendental Void and, as his bodily consciousness falls into a swoon, his inner condition becomes apparent when the body falls to the ground as if lifeless, like a tree severed from its roots.

Siddhānta sources also describe initiation as a process that commences with the detachment of the fetters from the soul. But although they know about Kuṇḍalinī, the importance of her activity in this process is not stressed as it is in the Kaula Tantras. However, they agree that initiation is essentially a 'descent of power' (*śaktipāta*), that is, the deities power of grace. According to whether this is more or less intense, the disciple manifests various visible signs (see note to 33/47-49). Those in whom they are apparent enjoy the prestige of being spiritual authorities. And so, in this Age of Darkness, the ṢSS (3/51) warns that there are people who feign these outer signs: 'By jerking upwards, shaking, trembling and flying through the sky – which are only outwards proofs (of initiation) – merely by these they are satisfied and arrogant by their state as authorities'. But despite the possibility of deceit the Śaiva tradition as a whole – including the Siddhānta – considers these signs to be important. Thus Trilocana, a Siddhānta author, explains that: '(The initiate dies and attains) immediate realisation by means of the most intense descent of power. (He) faints due to the intense (form) and shakes due to the mild (*manda*) (while) the mildest (causes him to) horripilate.

This is the (descending) hierarchy of the signs (*cihna* of attainment)' (quoted in SŚP III p. 7; see above 30/236-237ab).

The Kaula traditions agree that this takes place by the power of grace but they stress that it operates through and as the activity of Kuṇḍalinī. It is her emergence out beyond the Cavity of Brahmā, that induces the state of contemplation which is so deep that outwardly the neophant appears to be as if dead (Cf. KMT 4/20-23ab and 13/24-28 quoted in intro. vol. 1, p. 210-211 and 258-259). Moreover, although the Siddhānta does acknowledge that these signs arise in the course of initiation, generally they are not of much interest. The union that takes place with Śiva is not understood by most Siddhāntas to be a violent, sudden penetration. Conversely, the Kaula initiation by 'piercing' is modelled on that of possession and penetration by the deity, its energies or aspects. Consequently, there is considerable concern to diagnose whether initiation has taken place successfully by observing such outer signs (see below 41/50-51ab). Abhinavagupta, quotes the *Kulagahvaratantra* as saying:

> The goal that is to be achieved (*sādhya*), liberation and the rest, is beyond the senses. (Thus it can only) be inferred (to have been attained) by means of the signs of attainment (*pratyaya*). TĀ 24/17ab

One of the signs to which Abhinava is referring to here is particularly striking. The context is a rite that serves to conjoin the soul of a person who has just died to Śiva. By means of the procedure Abhinava outlines, the teacher induces the energies of his dead disciple to move through the corpse in order to bring this about. If all goes well, the corpse confirms that this has taken place by raising the left hand! (ibid. 24/15). Abhinava stresses that such signs are not in themselves aids to the goal. Their sole function is to indicate the progress towards it (TĀ 24/16). However, it is important to know this and so Abhinava insists that they should be observable not just as signs of the efficacity of the rite or even of the deity's grace, but also because they reveal the teacher's power. Abhinava illustrates this power with a colourful examples:

> The great yogi, like an animal that has great strength in its tail, after having struck the vital channel (*nāḍī*) of another, encapsulated in his own, makes even a Siddha fall with force to the ground. TĀ 29/270

In passing we may observe that the signs that appear during initiation are also well known to the devotional schools as signs of divine love. The texts abound with descriptions of them. For example the *Śrīmadbhāgavata* teaches:

> (Therefore) hearing of the most auspicious descents and deeds of Śrī Hari (the wielder of the discus) and singing His names denoting His descents and

actions, well known in the world, without any fear of being mocked at, one should move about free from attachment.

The man who, having adopted such a course of conduct (*evaṁvratarata*), develops love for Him by singing the names of his beloved Lord, his heart melting in devotion, loudly laughs and weeps, screams, sings or dances like one possessed, transgressing conventions. 11/2/39-40 (trans. C. L. Goswami)

The great Gauḍīya Vaiṣṇava Śrīcaitanya was a living example of such a devotee. The following is drawn from a biography of his life (Yati 1989: 216):

Lord Chaitanya Mahaprabhu says: "What mantra my Lord hast thou given me? The continuous recital of it has made me mad. It makes me laugh, dance and cry." *Śrīcaitanyacaritāmṛta* says: At times He suddenly bursts out laughing. Immediately after he cries bitterly. Next he falls unconscious or runs fast or dances in an ecstatic mood or breathes a deep sigh . . . Lord Caitanya Mahāprabhu says:

Oh my eyes overflow with tears,
My voice husky with love
Chokes all utterance on my lips
And all my limbs vibrate with tender joy
On taking Thy sacred name!

The signs of attainment are discussed at length below in the notes to 33/47-49.

26. The word *śṛṅgāṭa* literally means 'water chestnut',

27. The Equal One is at the base of the triangle of Meru in the End of the Twelve above the head and the Pervasive One is on its peak. But the triangle is inverted and so its peak touches the Cavity of Brahmā at the top of the head whereas the base is situated above at the upper extremity of the End of the Twelve. The situation is (perhaps) comparable to that of the series associated with the syllable HSKHPHREṀ (explained above in KuKh 9/2cd-19ab). As we have seen, the six letters correspond to the Six Wheels. Then above them, in the Wheel of Space, comes the Point > Half Moon > Śiva > Śakti > Pervasive One> Equal One. At once transcending the series and its ultimate culmination, is the Transmental at the End of the Sixteen. In this series this is called the End of Sound, which is the Full Moon in the 'Cavity of the Beak of the Crow' in the back of the throat that drips lunar nectar (31/44).

28. HAṀSA is Unstruck Sound. The Point (*bindu*) between HA and SA – exhalation and inhalation – is Space (*ākāśa*), the fifth and most subtle of the elements that contains and sustains the other four. Kuṇḍalinī sleeps coiled just below the navel. When she awakens, she straightens thus piercing through the

centre of the lotus of the navel. From there she rises in the form of Unstruck Sound up through the throat to reach the Cavity of Brahmā at the top of the head. When Kuṇḍalinī pierces through this, the Door that opens out to the transcendental being of Akula, she resumes her complete and original nature as the creative desire (*kāma*) or will (*icchā*) through which the universe is created, symbolized by the Full Moon. This feminine, lunar desire, is simultaneously both fully manifest, replete with its lunar energies, and is also their unmanifest source. Unmanifest, she is the energy Beyond Mind, the Inexplicable which is the absolute, divine being within which she lies hidden, radiating her power. As she makes the transition through the Cavity of Brahmā on the crown of the head from the embodied to the disembodied state she shifts from her completely manifest form below – the Full Moon – to her unmanifest form above – the New Moon

The Cavities lead into one another both from within the subtle body and beyond it. Thus Kuṇḍalinī may enter any Cavity at one extremity and emerge from any other Cavity at the other extremity. In this case, she descends from the End of the Twelve to the Cavity of Brahmā on the crown of the head, to suddenly emerge in the Cavity in the middle of the lotus of the navel. From the navel she leaps to the Cavity in the throat. There she gathers together her lunar energies as the yogi contemplates her 'in the form of a snake'. Thus progressively filled with her energies she becomes the Full Moon. Then she re-enters the transcendent through the Cavity of Brahmā. In the transition, the energies she has gathered into herself merge into their transcendental source and she remains as the pure potency of the New Moon in the 'dark night' of transcendental emptiness.

29. Kuṇḍalinī is depicted here as all three luminaries – the Moon, the Sun and Fire.

30. The New Moon rests above the Cavity of Brahmā in the End of the Sixteen. The New Moon is Kuṇḍalinī's condition at the summit of her ascent. As she rises she leads the individual soul she transports along with her closer to the Centre around which the Wheels are arranged and is their highest point. Thus from the perspective of the ascending soul he is drawing the Centre, full of Kuṇḍalinī's dynamism, towards himself.

31. The Beak of the Crow is the centre of the palate (31/118cd-119). The End of Sound is the Supreme Principle, the 'Place of the Unmanifest', which is 'devoid of Sound' (31/65). Thus, Kuṇḍalinī emerges from the navel as Haṁsinī, the energy of Unstruck Sound and penetrates into the Supreme Principle as Kākinī – the energy of the Beak of the Crow, which is another aspect of Unstruck Sound. At the same time, she persists unchanging in the middle between the two as the Haṁsinī who swims in the Lake of Transmigratory existence.

32. The text digresses briefly up to verse 48 to describe Kuṇḍalinī, the Supreme Energy, who pierces through the Drop in the Beak of the Crow at the back of the palate. The names of Kuṇḍalinī and manner of referring to her are

very varied. In this chapter alone she appears as the Supreme Energy, the Transmental, Unstruck Sound, the Yoginī, Haṁsinī and Kākinī (the energies of Unstruck Sound and the vital breath), Rudra's energy, the Flame (Śikhā), Nirvāṇā, the Form of Peace (Śāntarūpā), the Hunched-back Woman, Kālakarṣaṇī, Light, and the Doomsday Fire. She is like a smokeless burning coal, a spark of a fire, a great flame of fire, a lightning flash, and the Twelve Suns of the months of the year. As the 'Line of the Heart' (Hṛllekhā) she is subtle like a lotus fibre or a spider's thread. As Suṣumṇā her form is Emptiness (*vyomarūpiṇī*). Thus she moves within her own Emptiness as the Skyfaring Goddess (Khageśī, Khecarī) not only in the Wheel of the Skyfarers at the summit but also throughout her rise to it and descent from it. Indeed her form is Space, just as it is radiant energy (*tejas*) and Unstruck Sound.

33. Presumably, the description of the phases of the process of penetration resumes here. If so 'the place' where the yogi sees the Siddhas is the Void to which he is given access when Kuṇḍalinī penetrates the Drop in the palate. There the yogi contemplates the Lord, who is free of phenomena and is supremely tranquil. He is the Supreme Principle, the source of all things that it generates as Kula, Akula, and Kaula, the aspects and permutations of its own infinite being. There the yogi contemplates Raudrī, the energy of Emptiness and sees the Rudras. These are the Siddhas, the countless liberated souls who have attained the supreme liberated state. The KMT (6/93cd-95) drawing from the TS describes them:

> Again, there are countless millions of individual souls (*aṇu*) born in the Earth and the other (elements) up to the Sky, and so too in every individual principle. Similarly, the Rudras are of subtle form and they are innumerable. Everything is pervaded by these extremely subtle Rudras.

See below, note to 13/100-101ab.

34. '*vyomarūpāntam*' can also mean 'at the end of the Void nature', that is, beyond the Void of the transcendental aspect of ultimate reality.

35. See above, note to 3/124.

36. Or 'along with (that)' . . .

37. The word '*caraṇa*' literally means `foot'.

38. Suddenly, after having scaled the heights, we find ourselves again at the beginning. From here starts a second sequence in which Kuṇḍalinī may rise through which the yogi who has failed to attain the Supreme State may attempt to do so again (see below note to 31/111ab). We may also understand it to be a way in which he consolidates his attainment and make it permanent. Once the yogi has attained a vision of the goddess as the Doomsday Fire, at the summit, he returns to contemplate her in her initial form as a small Flame that emerges from the spark

that ignites it in the navel of the subtle body. Then he observes her wonderful rise through it once again.

39. The Drop out of which Kuṇḍalinī emerges is the one in the navel. She is herself the Drop there in the Centre that shines like 'the spark of a fire'. She rises out of this spark in the form of a small flame. Her progress in this case through the Cavities of the Wheels is gradual. Slowly but steadily, she 'crawls upwards', splitting apart Suṣumṇā like the Liṅga from which she emerges as Kubjikā in her myth. At each station she pauses. At each place she again resumes the form of a Drop to then issues from it as a Flame. Thus, there are three Drops within the three Cavities or Doors – in the navel, in the heart and in the throat, that shine with the light of the Sun, the Moon and Fire. The yogi is instructed to attend to the Drop in the centre of which Kuṇḍalinī shines and observe the Flame that moves from one to other. In this way the three lights merge into one another and then, rising beyond the last of the three Drops, they merge into the Great Light of Kālakarṣinī, who shines 'like a smokeless, burning coal'. This is the Supreme Drop – the Bud of the Kadamba in the End of the Twelve where the yogi beholds the goddess herself directly. There in an instant he perceives her infinite energy penetrating into all things, pervading the limitless expanse of the universe she makes manifests. Thus he attains both liberation and countless magical and yogic powers.

40. In the previous sequence, the goddess is visualized in the throat in the form of a snake (31/39).

41. The Point called the Krama is the Supreme Point. Presumably, it is called the Krama because it is the source of the Krama, as it is of all things.

42. Cf. above 3/157cd-159.

43. There are two Kuṇḍalinīs. One is the lower Kuṇḍalinī whose form is a flame and rises out of the navel. The other is the fully raised Kuṇḍalinī who is here identified with Kālī as Kālakarṣaṇī who draws the transitoriness of time and the inevitable death and destruction it entails into herself and there consumes it. Her form is like a coiled snake who sleeps at the extremity of the End of the Twelve. In this sequence the lower Kuṇḍalinī rises from the navel and moves through the heart, the throat, the palate, and the Point between the eyebrows to then rise up into the End of the Twelve where she awakens her counterpart and merges with her.

Although the End of the Twelve was unknown to the later Śākta Tantrics, they retained the notion of these two Kuṇḍalinīs. Woodroffe (1997: 36) begins by describing the higher form of Kuṇḍalinī, which is coiled:

> To say that it is "coiled" is to say that it is *at rest* – that is, in the form of *static potential energy*. This Śakti coiled round the Supreme Śiva is called Mahākuṇḍalī ("the great coiled power"), to distinguish it from the same power

which exists in individual bodies, and which is called Kuṇḍalinī. It is with and through the last power that this Yoga is effected. When it is accomplished the individual Śakti (Kuṇḍalī) is united with the great cosmic Śakti (Mahākuṇḍalī), and She with Śiva, with whom she is essentially one.

Woodroffe says something in a note here which tells us that although many changes took place, nonetheless, the connection with the earlier Kubjikā doctrines that taught that this goddesses is Kuṇḍalinī in a special sense, rather than generically as all Kaula goddesses are, was not entirely lost. He writes (ibid.): Because she is thus bent, the Devī is called Kubjikā (hunched-back).

44. The yogi not only sees the light of the Drop in the palate, he also hears its Sound which is 'of many forms' (31/61-62ab). Here, in the flow of the Void of Sound, this Sound comes to an end and with it the fettered state of transmigration. Thus the yogi realises his essential emptiness and, himself the Void, merges into the Emptiness of the Supreme Principle. But his consciousness is not thereby simply annulled. On the contrary, entering the Void, which is the 'divine body' of the deity, he sees and knows infinitely more than in his previous embodied state.

45. Cf. 7/41cd-42ab. Although most commonly called the Kadamba bud, the Drop is also sometimes called the Kadamba flower. Both names are inspired by the form the luminous energy of the goddess assumes by her incessent rotating motion as she moves through the phases of creation and destruction. We are told below that there are three Cavities, the heart, the throat and the centre of the palate (31/86). Presumably these are the Three Doors.

The *maṇḍala* at the End of the Twelve is a downward facing triangle surrounded by the Circles of Sun, Moon and Fire, which are identified here with the three Drops in the three Cavities. In the body they follow one after another in a straight line. Gathered together in the End of the Twelve they are the corners of the Triangle that house all the triads.

In the centre of the *maṇḍala* is the Kadamba tree. This is the Peak syllable (*kūṭa*) HSKHPHREṀ. Traversing through all the levels of Sound up to the Point (*bindu* / *anusvāra*) at the summit of the letters, Kuṇḍalinī merges into the bud of the Kadamba tree in the centre of the *maṇḍala*.

46. Cf. 7/14cd-15ab.

47. The plane 'at the end of the nose' is the supreme one. When the yogi attains that he is free (31/87). The Nose – *nāsā,* the Great Nose – *mahānāsā* or the Little Nose – *nāsikā* – all denote Kuṇḍalinī, the power of the vital breath (*prāṇaśakti*) because it 'moves on a crooked or curved path' (*nāsate*) (see Dyczkowski 1992: 175). Bhāskara commenting on the *Śivasūtras* (3/45; ibid. 174) explains:

The nose means the inner Twelve-finger Space (where the breaths come to rest). Those who fix their attention there merge (into universal consciousness) and so, conquering (the breath), their own fundamental and abiding state of being (*svātmasthiti*) becomes clearly apparent.

Below we are told that the Triangle of the goddess is located above the Six Wheels and that its sides are the energies of will, knowledge and action (35/55). These are, presumably, the 'three lines' at the juction of the 'Great Nose', that is, Kuṇḍalinī. This Triangle is called the Trident of Knowledge because the power of knowledge is the Command in the centre from which those of will and action issue to the left and right (35/56). These three energies include all the triads we have come across in this passage. Thus, according to the *Ṭippaṇī* of the KMT: 'the Trident is the means by which the three channels (of the breath) are made one (*triśūlaṁ nāḍītrayasya ekīkaraṇaṁ*), (ibid. fl. 28a). Again: 'the Trident is the triple principle, which is the threefold energy (*tejas*) of the circles of the Sun, the Moon and Fire (*sūryacandravahnimaṇḍalānāṁ trayāṇāṁ tejastrayam eva triśūlaṁ tritattvaṁ*) (ibid. fl. 53a) and 'the triangle is the Trident, which is the Inexplicable' (*trikoṇaṁ triśūlam anākhyaṁ*) (ibid. fl. 54b).

48. Once the yogi has reached this, the supreme state, he acquires the supreme power the Goddess herself possesses of piercing all things with the deity's divine power. This is is the supreme accomplishment (*parāsiddhi*). One who has accomplished this Yoga become Bhairava himself (31/88cd-89).

49. Concerning these yogic powers see note 71 of chapter eight.

50. Cf. above 31/62cd-63 where we are told that Kuṇḍalinī is a 'smokeless coal'. Perhaps the 'smoke' is the Wick of Smoke that rises from the Cavity of Brahmā on the crown of the head and disappears into the End of the Twelve (see intro. vol. 1, p. 378-379).

51. Cf. 31/29.

52. See above 31/72 and note.

53. Rising through the body, piercing the Wheels as it does so, when the Command reaches the Cavity of Brahmā having absorbed into itself all the energies of the body, the adept falls into a deep yogic trance which is 'devoid of knowledge' of the outer world. This is called the Wooden State (*kāṣṭhāvasthā*). See KMT 4/21-23ab quoted in intro. vol. 1, p. 210-211.

54. One who attains the liberated Śāmbhava state is said to gain this power. The KMT (13/57cd) teaches: 'By means of the Śāmbhava (state) one knows and perceives all things before oneself.' Thus the Yoga meant here is the Yoga of the Command (*ājñāyoga*) the goddess practiced in the Liṅga, through which she attained this state and with it the Command (ibid. 1/65). It is attained by the initiation by the piercing that burns away impurity (see below 33/17-18ab).

55. This short passage up to 31/95 seems out of place here. It has little to do with subject at hand, which is a essentially a eulogy of the adept who has attained mastery of this Yoga of Piercing and its wonderful power. The point of this insertion appears to be that the First Teacher in his nine forms, one with Bhairava, and the lineages of Siddhas all received this consecration in the House of the City of the Moon in the 'South of India'. Like them, the adept who knows the piercing process (*vedhakrama*) is a true teacher (31/107-108ab).

56. Kucandra is the name of Śiva who resides in the middle of the Triangle with Kubjikā (see above 7/34-35ab and 7/51cd-52ab). In one place he is said to preside over the sacred seat called Tisra along with her (6/181). Elsewhere, he is associated with the sacred seat of the Moon (69/23). We have already seen that Śrīnātha, Śrīkaṇṭha and Tūṣṇīnātha are all names of the First Nātha (*ādinātha*) who came down to earth as an incarnation of Bhairava to initiate Oḍīśa, Ṣaṣṭhanātha and Mitranātha, the founders of the lineages of the Eldest, the Youth and the Child, respectively. The deity's gaze in this case, as in the several others we have already observed, brings about a theophany. This time the Lord assumes nine names, that is, becomes manifest in the world as the aforementioned founder figures by gazing on the Tamarind Tree. This Tree is Navātman. Thus, these nine are emanations of the nine Bhairavas who govern the letters of Navātman and so are all equally the First Teacher – Ādinātha, embodied in the Navātman. Another set of nine names, we are told explicitly, corresponding to the nine letters of Navātman, are listed below in 52/5cd-7.

57. It is not clear exactly what these sequences stand for. The 'eighteen divisions' are, no doubt, the Divine Current of teachers. And the Couple – Śiva and Śakti – is said in the *Saṁvartāsūtra* to be the essence of this and all the other series of teachers. This leads one to suppose that the ascending series of 1, 3, 5, 7 and 9 ending with the 16 can be identified with the corresponding groups of Siddhas who, according to YKh (2) (15/1-42) constitute what is called there the *Divyaugha* or *Divyakrama* of the lineages of teachers.

58. The first series of three Cavities Kuṇḍalinī penetrates are the navel, the throat and the Cavity of Brahmā (31/39); the second is the heart, the throat and the palate (31/86) and this, the third one, is the Foundation at the base of the spine, the heart and the throat. The three series cover all the centres except the one between the eyebrows, which is, surprisingly, omitted.

59. The 'utterance of Energy' is the flow of Kuṇḍalinī the teacher induces in his disciple who is transported by it out of the body. He is thus placed in front of the teacher who lays hold of his fettered soul by merging it into the flow of his own Kuṇḍalinī. The teacher then guides the flow of his disciple's Kuṇḍalinī, strengthened by his own to his 'abode', that is, the plane of being in which he abides at one with the deity. He does this by means of his breathing. First he inhales to catch hold of his disciple's exhalation. Then he retains the breath. This

brings the disciple's soul to rest in Emptiness. He is thus 'thrown into the jar' of the retained breath (*kumbhaka*) where the teacher penetrates him with his spiritual energy. In this way a 'ball of nectar' is generated within the Emptiness that nourishes the fettered soul. Thus replenished, the disciple slowly inhales but, instead of returning to the body, he enters the undifferentiated Emptiness of deity, There he is purified of what remains of the latent traces of the past actions that bind him. Finally, once purified in the transcendental Emptiness, the energy of Kuṇḍalinī, that flows from it, is united with all the principles of existence that constitute the immanent, differentiated sphere of embodied existence. In this way, inwardly in undifferentiated Emptiness and externally in the regenerated body and the world, filled with the energy of Kuṇḍalinī, the fettered soul is liberated and resides, as does his teacher and every liberated being, in the abode of the deity.

60. Cf. above 31/43.

61. The Khecarīcakra is described in KMT 16.

62. The outer form of the mantra called Calacakra – the Moving Wheel (also Umāmaheśvara) – is described first in chapter five of the KMT (5/68-91) which is drawn from the TS. This need not concern us here. The inner recitation of this mantra – the Kaula Umāmaheśvara – which is presumably alluded to here, is described in the following passage in the KMT:

O fair faced lady, one should see (the energy) which is in the form of a sleeping snake in the End of the Twelve and also in the same way, O Supreme Goddess, in the navel. (The goddess) who is (both) inferior and supreme is seen in the middle of the body at the end of the Void (*vyomānte).* Then the mantra that is in front of it is the form of a spark of fire. Then, O beloved, one should utter the mantra in the form of words within the Heart. At the end of the words, one should utter the Energy (which is in the form of a) slight, gentle breeze. Its shape is like that of a lotus filament and it should be uttered with the nasalisation. At the end of the utterance, when it ceases, one should know that it is like the wheel of (light made by) a firebrand. Consciousness (*caitanya*) is in the middle of that, along with the mantra. It pulsates radiantly countless times with many rays (that shine in all) the directions. Again, O goddess, within that is the Primordial Energy, Mind Beyond Mind (*manonmanī*). In her transcendental state she is said to be (the energy) of the Point (*bindvī*). The pervasive God is within the Point. Beyond Māyā he is flawless. He is Śiva and transcends thought. Qualitiless, he is born of the qualities. He has authority and does all things. He is the Great Lord beyond Energy. The Krama should be performed in conjunction with this sequence (*krama*) by those who are fully determined. (84-91)

Those who desire success (*siddhi*) should know the (consciousness) which has become one with the Self, mind, mantra, Śiva and Śakti. Thus one should practice the repetition of mantra in conjunction with the breath (*prāṇasama*) within mantra in the sphere of Sound. Then once known at the End of Sound, that is called `recollection' (*smaraṇa*). `Recollection' is said to be Śakti who `comes and goes'. At the end of Śakti is the subtle, supreme energy (*kalā*) and that is Nectar (*amṛta*). It is beyond merger, formless and known of itself (*svayaṁvedyā*) by desisting from thought. O goddess, it has no characteristic, no mark, it is not destroyed nor does it grow; it is neither black nor white, it is devoid of night and day, *sandhyā*, *ayana*, *viṣuva* and *saṇkrānti*. Consciousness arises once one has known the condition (*gati*) of all states. O beloved, this is the Kaula Umāmaheśvara. By repeating the Moving One 100,000 one certainly flies up into the air. Motion (*calā*) is said to be power uttered by the (reality) which is the mark (of consciousness). She is said to be Mālinī who is without letters (*avarṇā*) and conjoined to them. Once she is associated with the individual parts (*pada* of the mantra), O fair faced one, she is without number. (KMT 5/92-100ab)

63. The word '*piṇḍa'* literally means a 'conglomeration' or 'ball' and so, by extension, a 'body'. I suppose *piṇḍa* here means the *kulapiṇḍa*, that is, the aggregate of fifty letters that make up the body of Kula. Thus the 'belly of the body' is the Yoni full of the phonemic energies of Speech (see above 2/34cd-35ab).

64. See ṢSS 3/48 ff. concerning the many evils of this, the Age of Strife. Cf. above, 6/175-177ab and below 69/24-25ab where we are told that the kingdom of the barbarians will be in the North. It is clear that the reference here is to Muslim rule. See Dyczkowski 1986: 9-11 and 98 and discussion in intro. vol. 3, p. 297 ff..

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-TWO

1. This chapter deals with the characteristics of true and false teachers and disciples. It opens with the 'great arising from Meru' of the teachers of previous aeons At first sight it appears that this passage is independent of the rest of the chapter and has little to do with it, but that is not so. All major rites begin with the worship of the lineages of teachers and cannot be performed without knowing them. It supplies information that an initiate must know to qualify him to be a true teacher and hence is one of his characteristics.

In the earliest period of the formation of the rites of the Kubjikā Tantras the worship of the first teachers was confined to those related to the emanations of the Bhairava's forms, that is, the Five Siddhas. Subsequently, to these were added the Nine Nāthas who were originally the Bhairavas of the nine letters of Navātman, his seed-syllable mantra. The Sixty Teachers and One Hundred Teachers is a later addition that aims to sink the roots of the tradition firmly not just to earlier Ages (*yuga*) but also aeons (*kalpa*).

A similar series of teachers, but with entirely different names, is found in the first chapter of what remains of the *Kulakaulinīmata*. The *Ṭīkā* (MS K fl. 182b) in the course of its commentary on this chapter of the KuKauM reproduces the same list, which we need not do here. Our text lists one hundred teachers, corresponding to as many years distributed through the four Ages (*yuga*). The KuKauM refers to just sixty teachers called the Sixty Years (*saṁvatsara* or *abda*) named after the years in which they received the goddess's grace (*yasya yasya yasmin yasmin saṁvatsare 'nugraho [k kh: -haṁ] jātaḥ [k kh: jātaṁ] sa [k kh: te] ca saṁvatsaraḥ* | Ṭ ibid.). Belonging to the three lineages, they are closely related (*bhratṛvarga*) and are said to have lived at the end of the aeon (*kalpa*) in the Deccan (*dakṣiṇāpatha*) (*saṣṭyabdās te samākhyātāḥ kalpānte dakṣiṇāpathe* KuKauM 1/23cd).

The text stresses that it is essential to know the correct order of seniority of these teachers and those of one's own lineage (*svoli*). Accessible only to initiates of that lineage, this knowledge is a sign that they belong to it. Thus, those who possess it may freely participate in the rites and dine together.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-THREE

1. After the brief digression in the previous chapter, in this one we return to the theme of chapter thirty-one, namely, initiation. This chapter is called ‘concerning the Initiation with Seed’ The distinction between initiation ‘with seed’ and ‘without seed’ is defined concisely by the CMSS as follows:

> The initiation by mantra `with seed' involves offerings to the fire (*hutā*) with clarified butter, cooked rice and sesame seed. Kaulikī initiation is `without seed' and consists of the piercing (*vedha*) (of the inner centres).

mantradīkṣā sabījā ca ājyānnaiḥ [k, kh, g: ājyānna; gh: ājyanna]
satilair hutā [k: latilai hutaṁ; kh: laṁtilair hutam; g: latilair hutam; gh: latilaihutaṁ] ||
nirbījā [k g: nibījā; gh: -ja] kaulikī dīkṣā [g: dīkṣyā] vedhanātmasvarūpataḥ [sarve: vedhamātma-] | CMSS 3/56cd-57ab

Our text similarly refers to the first kind of initiation as one that involves offerings to the fire (*hotrīdīkṣā*). This is defined as a Tāntrika initiation and contrasted with the other which is a Kaula initiation (33/19cd-20). The second kind ‘without seed’ is taught first (up to 33/53). The other kind – ‘with seed’ – is the subject of the rest of the chapter which is drawn from chapter nine (verses 1 to 244) of the *Tantrasadbhāva*.

The first type of initiation (‘with seed’) is by means of the Principles (*tattvadīkṣā*), that is, by means of the Six Paths (*ṣaḍadhvan*). This is explained from line 53cd to the end of the chapter, which is mostly all drawn from chapter nine of the *Tantrasadbhāva*. The other (‘without seed’) is Initiation by Piercing, which is not based on the Six Paths. It is treated first in a passage (from the beginning of the chapter to line 53ab) that may be either drawn from a different source or, quite possibly, is an original part of the text of the KuKh.

2. Initiation is generally understood in all Tantric traditions to be a means to gain both worldly benefits (*bhoga*) and liberation. Here, the latter is represented as Yoga, which is, as the word literally means, ‘union’. It is the liberating union of the individual soul with the Supreme Principle. This Yoga is brought about by the forms of initiation that take place by piercing (*vedha*) the inner centres of the subtle body (33/21) with the energies and aspects of the Command. Thus it is called the Yoga of the Command. See below 33/17-18ab and above, 31/88cd-89.

3. It appears that a part of the text in which the remaining states are listed has been lost.

4. The ‘invisible’ forms of initiation by piercing are those that lead to the attainment of Yoga and do not make use of the Six Paths. The ‘visible’ one, called

the Initiation by means of the Principles, gives worldly benefits (*bhoga*) and does make use of them (33/1-2). The latter involves substantial outer ritual procedure whereas the former does not. This is probably why they are said to be ‘visible’ and ‘invisible’, respectively. However, these distinctions are not strictly maintained. Amongst the initiations by means of the ‘invisible piercing’ the so-called Individual Initiation is said to be a ‘visible’ one (33/30-31ab). Moreover, the Empowered Initiation requires some (but not much) preliminary outer ritual.

5. Cf. below, 33/31. Concerning the Six Paths see above note to 2/29-30ab and appendix 1 and 2. where they are described in detail as part the sixteenfold consecration.

6. There are five major states or signs of attainment (see 33/47 and notes) that characterize this type of initiation and its varieties (33/53-54ab).

7. Cf. ŚM 13/258-266 quoted in intro. vol. 1, p. 213

8. At the conclusion of this passage on the forms of initiation that don’t make use of the Six Paths, we are told that they are of three kinds – the human (*mānava*), the one that takes place by recollection (*smaraṇa*) and the one that takes place by the gaze of the teacher (33/52-53ab). These correspond to the Individual (*āṇava*), Empowered (*śākta*) and Śāmbhava forms of initiation (33/30-31ab). The ‘human one’ is clearly the Individual one. The Empowered, as we shall see, is here presented as the one that comes about by the power of the teacher’s gaze. It would be more appropriate to relate it to the Śāmbhava form which is normally considered to be the most direct and powerful. ‘Recollection’, which entails cogitation, characterizes the Empowered variety best. See note to 33/30-31ab.

9. Concerning this form of initiation and the signs of realization, see below note 16 to 33/47.

10. See above, note to 33/22-23. These three types of initiation are defined and described in the KRU 8/99cd-108, which is quoted in the intro. vol. 1 p. 464-465. See ibid. p. 474 ff. for a discussion of this important triad.

11. Compare above 30/200cd-201ab where we are told that sinners gain yogic powers by seeing, touching, seeing or meeting with a perfected teacher. There, as here, these are said to bring about the Initiation of Knowledge.

12. Probably because of a lacuna in the transmitted text the Initiation by Speech is missing.

13. It appears that the Arduous Piercing has replaced the Piercing with Speech mentioned above in 33/33ab.

14. Cf. 33/71cd-72. But the text there refers to the worship of only one Kumārī. See also above 11/53, and note.

15. Cf. above 5/34; 31/32cd-35ab and below 33/181-186. Concerning the nature of impurity see notes 8 to 10 of chapter 13.

16. See intro. to vol. 1 p. 459. The signs of attainment are many. Often listed randomly, reflecting the spontaneous manner in which they appear, as they are in the following verses, they may also be arranged in groups. This set of five is one of the most common and is found in other traditions also, including Trika (refer to *Triśirobhairava* and *Mālinīvijaya* quoted below) and the Kālīkrama (see ŪKau 2/231-232 quoted in intro. vol. 1, p. 202). These five are so basic that Abhinava refers only to them because, as Jayaratha says (comm. TĀ 5/106): '(these) five signs alone are sufficient and so only these have been accepted (as the signs of accomplishment) and not others because they are (all) included here (in these five).' Similarly, below we are told that the three forms initition are of many kinds, and that what is special about them is that they give rise to these five states (33/52-53ab), although others are mentioned in the following lines. Previously we were told that the Empowered form of initiation is of five kinds (33/30-31ab) possibly with reference to these five states although they are not, of course, in themselves, initiations. Ideally the disciple is struck down by the force of the transmission of the Command and attains the supreme state in an instant, but he may also progress gradually through the five states of which these are the outer signs.

These signs of attainment appear in the course of initiation and the teacher observes their appearance to determine whether the initiation has taken effect (above 31/32cd-35ab). Abhinavagupta acknowledges their use in this way. But this is not always the case. They may also appear in other circumstances when a transmission of spiritual energy takes place (see note to 33/48-49 below) or when Kuṇḍalinī rises in the course of practice. The latter context is the one Abhinava chooses as the one most suitable for his exposition. As they correspond to visible bodily states, Abhinava presents an explanation of these five signs of attainment in the context of his exposition of the Individual Means (*āṇavopāya*). He does so after discussing a passage from the *Brahmayāmala* which lists ten forms of Unstruck Sound heard inwardly by the yogi as he progresses in his practice to the highest state (see below 36/60-63 and note). This is the meditation (*bhāvanā*) to which Abhinava refers at the beginning of his explanation of the five signs:

(Initially), by (practicing) the meditation (*bhāvanā*) (described) here, (the yogi) who desires to enter the Supreme Path by bodily means (experiences) the joy (*ānanda*) brought about by (his first) contact with the plenitude (of consciousness).

Then (the next thing that happens) is an upward movement (*udbhava*), that is, an evident leap (of the body and consciousness). This takes place by penetrating (*samāveśa*) for a moment into the (supreme) abode that, free of the body, (manifests) as does (a sudden) flash of lightning.

(Next comes) a tremor (*kampa*). This comes about because, entering (and laying hold) of one's own innate power (*svabala*), (the connection), intimate as that between mud and water, (amounting to the) oneness of the body with consciousness, that has repeatedly taken place (for countless births), has ended, and (this) weakens the body.

(Thus) when the notion (that consciousness) is identical with the body has fallen away (the yogi) is in a state of introverted contemplation and so initially falls asleep as long as he is not well established in the conscious nature.

Then, established on the Plane of Truth, (the yogi) intuites that consciousness is all things, and he vibrates for `vibration' (the realisation of the true nature of the eternal cycle of creation and destruction) is said to be the Great Pervasion. TĀ 5/100cd-105ab.

Jayaratha quotes a passage from an unnamed source in which ten such signs are listed. I suppose that it is drawn from the *Brahmayāmala* and follows after the one to which Abhinava refers in relation to the ten forms of Unstruck Sound. If so, these ten signs or states (concerning which see note to 33/48-49), not the five mentioned here, are those the yogi experiences as he hears the ten forms of Unstruck Sound. Indeed, on the authority of this reference, Jayaratha says that there are other signs as he introduces what Abhinava says next about why he refers to only these five in his TĀ:

The presumption that the Self is what the Self is not and, that being so, the presumption that what is not the Self, that is, the body and the rest, is the Self, is bondage whereas the cessation (of these notions) is liberation.

The Great Pervasion comes about when first the (notion) of Self in what is not the Self has merged (into consciousness) once one has attained one's own authentic identity and (the notion) that there is no Self (*anātmatā*) in the Self has been destroyed.

Therefore it is said in the venerable *Mālinīvijayottara* that (the signs) are five, namely, joy, an upward movement, a tremor, sleep and vibration.
TĀ 5/105cd-108ab

Summerizing Jayaratha's explanation, these five phases and their attendant signs are as follows:

1. Joy is experienced when the first type of bondage ends, that is, that the Self is believed to be other than it is.
2. An upward movement takes place when, for a moment, the false notion that what is not the Self (i.e. the psychophysical organism) is the Self, ceases. Thus for an instant one attains a correct insight into the nature of the Self.

3. Then, if this state persists for an extended period of time, the yogi shakes as these false notions merge into consciousness completely.
4. The yogi falls into a yogic sleep (*yoganidrā*) when the residual traces of these false notions dissolve away into consciousness. This is because although his connection with the body, senses and mind has been severed, he is not yet capable of grasping his own true, independent consciousness.
5. As these traces decrease the yogi's realisation of his true identity becomes stable and he finally experiences the state of 'Great Pervasion' which is the condition of his authentic universal and transcendental nature.

Although Abhinava does not explain these 'signs on the path' (*pathalakṣana)*, as they are called in the TĀ, in the context of initition, nonetheless what he says is applicable to it. Initiation is understood to be essentially a process whereby the impurity (*mala*) that binds the individual soul is removed. We have seen that dualist Śaiva Siddhāntins consider this impurity to be a substance that stains or covers the individual soul thus separating it from Śiva. Kashmiri Śaivites, disagree. According to them this impurity is ignorance (see notes 8 to 10 of chapter 13 and that ignorance amounts to a mistaken notion of the Self. Thus the signs that appear in the course of the removal of 'impurity' are the result of the progressive correction of this mistake.

Kaula traditions declare themselves to be non-dualist. The goddess reminds the god that he is 'shrouded in Māyā' and so has forgotten his true identity. But does not enter into sophisticated explanations as to how this has occurred or what Māyā is and the reality it is obscuring to explain what happens at the various stages of the process of its removal. Instead the Tantras supply permutations, not infrequently quite complex, of a basically simple model of a graded ascent of the vital breath up the 'yogic body' through a series of centres within it that are variously represented and configured to which the signs of attainment may be linked. Abhinavagupta acknowledges the application of this paradigm and its relation to his exposition of the five states by referring to the *Triśirobhairavatantra* as saying:

> Just as the body, although pervaded by consciousness which is the master of all things, is capable of acting (only) to a certain degree in certain places, (like) the sense of sight (that can only) perceive form. In the same way, only a certain (type of experience) can arise by penetrating somewhere into a (particular) Wheel. It has been clearly stated in the venerable *Triśirobhairava Tantra* that: the Wheel of Joy is the Triangle, the upward movement is the Root, the tremor the Heart, sleep, the Palate, while vibration is the Upper *Kuṇḍalinī* (in the End of the Twelve). TĀ 5/105cd-112ab

Abhinavagupta is quite well aware that these signs should manifest in the course of initiation and refers to them twice in this context in his TĀ. When he does so he follows his sources both in the exposition of the procedure and their explanation of it. Thus he supplies quite a different reason for the appearance of these signs when discussing the Rite of the Balance (*tulāvidhi*) (cf. above 33/26). This is a brief form of initiation that Abhinava explains is designed to instill faith in the ignorant because it is said to bring about a decrease in the initiate's weight (see Sironi 1987: 89-113). The Buddhist Dharmakīrti (6th cent.) expressly refutes that a rite of initiation can do this if the reason for this loss of weight is supposed to be the removal of the initiate's sin, simply because sin is incorporeal (ibid. pp 94-97 with reference to PV 1/258cd-60ab). Although one would expect Abhinava to agree (after all ignorance, like sin, is also without weight), he adopts the Tantra's view. Thus, along with the other two explanations as to why these states arise, namely, eradication of the false notion of the Self and the movement of the vital breath through the centres in the body, in the following passage we find a third one:

Or else (the teacher) may perform the initiation that reduces (his disciple's) weight (*tulāsiddhidadīkṣā*) and possesses signs of attainment (*pratyaya*) as the Supreme Lord has explained (it) in the venerable *Tantrasadbhāva*. He has also (implicitely) referred to it in the *Mālinivijayottaratantra* (*Śrīpūrva*) where, when talking about the hierarchy of powers, (he) refers to (the five signs namely) joy, an upward movement (*udbhava*), tremor, sleep and vibration, which is the fifth. The upward movement is due to the (disciple's) lightness brought about by the obscuration of the influence of the body (on his consciousness). The body consists mostly of the (gross element) Earth. It abandons (its) basic (earthen nature) when (the teacher) has, by means of the mantras that remove weight to be (explained later), meditate on how the disciple has lept up (into the air). TĀ 20/11cd-15ab

The fourth explanation Abhinava sustains of these states appears in the context of his presentation of a passage in the MVT (11/29-39). This concerns the rite of initiation into the condition of a teacher's apprentice (*putraka*) that completes the basic one into the observance of the Rule (*samayadīkṣā*). Abhinava presents it in chapter 29 of his TĀ where he deals with the Kaula modality (*prakriyā*) of ritual and practice. Here the signs of the five states appear in the course of initiation. Abhinava again chooses to let the Tantra speak for itself. All he does is to specify that the 'energy' that acts in the course of the rite is Rudra's energy – Rudraśakti. Thus Abhinava finds the hermeneutical key to this passage in the MVT, which attributes the function of grace and purification to this energy, and hence to the manifestation of the five states or signs we are examining.

First of all, (the teacher) should project onto the disciple, who has been sprinkled (with consecrated water), the path that needs to be purified described previously (in TĀ 16/94cd-96). The teacher should visualize how energy, with which he is one (*tanmaya*), straight and well energized (*saṁdīptā*), travels from the (disciple's) feet up to the top of (his) head, burning away (as it does so the disciple's) fetters. Then (after the disciple has risen and the teacher) has sat down beside him, he should meditate how it burns away progressively (all things), beginning with the root of what is to be purified up to its final end. Once burnt away in this way, as explained before (in TĀ 17/7cd-64), all the principles and the rest that need to be purified, (the teacher) should think (how this power) dissolves away into Śiva who is either, 'with parts' (*sakala*) (if the disciple is to become a spiritual son) or 'without parts' (*niṣkala*) (if he is to become an adept) (*sādhaka*). Applied by the yogi to the path (of Suṣumṇā), (this energy) nourishes those things that are as it is (*sajātīya*) and burns away all that differs from it (*bhinnajāti*). Rudra's energy penetrates thus, in accord with the degree of intensity of the descent of energy (*śaktipāta*) (that is, grace) into consciousness (*citi*), the Void (*vyoman*), the vitality (*prāṇana*) and into the inner and outer body of the disciple. As (the disciple) is in the process of being purified (this energy) gives rise, in due order to this, its (various) bodily (*dehaga*) effects, namely (an experience of) joy, an upward movement, a tremour, sleep and vibration. TĀ 29/202cd-208.

Jayaratha explains: In this way Rudra's energy enters into the consciousness (*citi*) of the disciple whose fetters have been burnt away. (That is to say it enters) directly (into) the Self by the most intense (*tīvratīvra*) descent of power. (Thus it initially) gives rise to (an experience of) joy brought about by the weakest (*mandamanda*) descent of power when it enters the body (and progresses) up to (this, the state of) vibration (*ghūrṇi*). This is because the blissful nature is within consciousness and so it makes sense that (the disciple should experience) bliss. (Similarly), as there is space within the Void, that is, emptiness (it makes sense that he should experience an) upward movement. (It is reasonable that he experiences a) tremour in the vital breath because it does (shake the body as does the wind outer objects). Sleep (is the appropriate result when this energy penetrates into) the inner body, that is, in the intellect and the subtle body (*puryaṣṭaka*) because all of Māyā's activities (within it) are (thereby) brought to a halt. (Finally, he experiences) vibration by the destruction of the presence of the sense of ego in the outer body. The point is that in this way the teacher is sure that his (disciple's) initiation has taken place in a clear and directly apparent manner (*sākṣāt*).

Finally, we turn to a fifth explanation of these states. This one appears in chapter nine of the CMSS. We may call this explanation 'mystical'.

Śambhu's Command, pulsing radiantly, should pierce (*vedhayet*) the Circle of the Mothers. The Heart is the lotus of the Yoginīs, the radiant pulse (*prasphura*), which is the Circle of the Individual Soul. One should give joy to the power of awareness (*cetanā*) and light up the supreme principle. When the five principles (of the gross elements) have dissolved away, the Circle of the Void is melted and, having obtained and enjoyed the dawning of bliss, the fivefold state occurs.

O mistress of the gods, the disciple who has been pierced by the (Supreme) Principle (experiences) the fivefold state. This is joy (*ānanda*), an upward movement (*udbhava*), a tremor (*kampa*), sleep (*nidrā*) and vibration (*ghūrṇi*), the fifth.

1) Joy (*ānanda*): It is the initial inner pleasure (*sukha*) of supreme bliss (*ahlāda*) that generates joy. It is the divine current. The hairs (on the body of the yogi in this state) stand on end and the accomplishment of the Command (*ājñāsiddhi*) is attained.

2) The upward movement (*udbhava*): The wheel of the rays (of the mind and senses) has been melted (into consciounsess). The cavity of the navel has been expanded (and Kuṇḍalinī has been raised). (The yogi hears) the resonance (of consciousness), a leap, a jump. He constantly lets out the sound of laughter. This state is that of the upward movement that conjoins (to the supreme) and the accomplishment of the Command (*ājñāsiddhi*) is attained.

3) The tremor (*kampa*): (The yogi) should fill the cavity of the 72,000 channels (of the vital breath) with the current of his own divine and dense bliss and shake the Great Body (*mahāpiṇḍa*) with it. He moves on the earth like the sky and should strike at the fetters of conditioned existence. This is the state of tremor (during which) the accomplishment of the Command (*ājñāsiddhi*) is attained.

4) Sleep (*nidrā*): (The yogi) should enter the plane of tranquility having abandoned all (phenomenal) being. (The yogi who) abides between the perception of the object of perception and the imperceptible, established in the Void within the Void and supremely joyful with that bliss awakens himself in the sleep of Yoga. This is the state of sleep (in which) the accomplishment of the Command (*ājñāsiddhi*) is attained.

5) Vibration (*ghūrṇi*): The yogi who is satisfied with (these) four states pierces through the Egg of Brahmā and full, he vibrates (*ghūrṇyamāna*) constantly within the juice of supreme bliss. (This) is the divine transmission of the Command – the supreme (state) that generates eternal bliss. This is the state of the dawning of vibration (within which) the accomplishment of the Command (*ājñāsiddhi*) is attained.

O goddess, the (fivefold) state brought about by the power of Rudra's energy has been described. The Maṇḍala of One's Own Self is attained by the penetration (*samāveśa*) of Rudra's energy. Inexplicable, unmanifest, devoid of (any tangible) principle (of existence) and unsupported it abides within the Maṇḍala of the Unmanifest (*avyakta*) and, beyond the Krama, it is the dawning of the Krama.

The practice of the Krama is said (to take place) during the expansion (of consciousness that takes place) when the eyes open wherever vision perceives and (in so doing the sense of objective) being falls away.

Again, when all intention and thought (*saṁkalpa*) has come to an end, there is eternal bliss, (all that is) unconscious ceases and (the yogi) attains the wealth of liberation.

One should know this to be the Maṇḍala of the Unmanifest (*avyakta*) that cannot be obtained by that which is born of the manifest. Free of the five gross elements, it is said to be Akula. The will of (Akula) is the Supreme Power. She is pure and endowed with that same nature. She is called Kula, the arising of the fruit of supreme bliss.

17. Cf. above 13/98cd-102.

18. See notes to 11/64-65ab and 13/101cd-103.

19. The texts tirelessly list the many possible signs (*pratyaya*) of the adept's attainment. These include states he experiences, powers, both magical (see 39/159cd-60) and yogic (13/148), he may acquire and the peculiar ways he behaves when he is graced by a 'descent of power' (*śaktipāta*), that is, when, as the Kubjikā Tantras would say, he receives the transmission of the Command. According to the context, this is variously represented as a penetration by the Supreme Principle or by the Transmental deities – especially Rudraśakti – or by the powers of mantras and numerous other forms of penetration (*āveśa*). Most often, the signs are not listed in any particular order, reflecting the spontaneous random manner in which penetration often occurs. The occasions are many. The utterance of mantras by empowered adepts is one of them. Mantras, it is said, cause rocks to shake and armies are stopped dead in their tracks, just as they may paralyse the body. By their power a person can transfer his consciousness into another body. These too are signs of attainment (*pratyaya*) (33/176cd-177). The adept who is successful in the practice of mantra can meet anybody at will by just concentrating on that person. He knows the past, present and future as well as the supreme, transcendent and immanent reality (13/147-152). As one would expect, the goddess's Vidyā is especially powerful. We have seen how our text extolls the numerous powers the adept acquires by repeating it (see above 11/64cd ff). Although they are presented as attainments (*siddhi*) in themselves, they may

equally be considered to be signs (*pratyaya*) of attainment if they serve this purpose.

The depositions of mantras and letters on the body can also give rise to such states. These, like the recitation of mantras and Vidyās, purify the adept. By the deposition of the Mālinī letters on the body, for example, the adept experiences the same states that arise in the course of initiation (18/105-107ab). The deposition of the Assembly of Sounds is said to operate literally in this way. By practicing it, the adept receives the consecration of the Command and so he first experiences the signs of attainment and then, finally, the clearest sign of all that can manifest in the course of initiation – he falls senseless to the ground (24/86cd-87).

Vidyā, mantras and with them, deities penetrate (*āveśa*) the body and this brings about the realisation of the Command with all its benefits. We should not confuse these signs with the benefits that are obtained by the penetration of the goddess and her Command such as wealth or sons (see, for example, 12/1ff.), although in some cases the two coincide. For example, one of the major benefits of penetration by the Samayā Vidyā is knowledge. This is also, as one would expect, one of the benefits of receiving the Command which strengthens the adept's intelligence and intuition as well as his moral fibre (see above reference from 5/35). However, these are not brought about by any practice in itself. They are the result of the penetration (*āveśa*) of the spiritual energy that destroys Māyā and with it the impurities that bind the individual soul (above 13/100-101ab). Thus, without reference to any particular practice they are said to arise in a moment by just 'recollecting the Command' (7/43cd-44ab).

Whatever be the occasions for this recollection, many signs arise. While many of them are visible to others, indeed, they may be spectacular, many are only inwardly apparent. For example, inner signs that accompany the initiation by piercing into the Kulakrama include a divine sense of hearing, intuition (*mati*), mental perception, understanding (*cetas*), strength of character (*dhṛti*) and forebearance (*kṣamā*) (5/35) and the slanted, upward movement of *kuṇḍalinī* (7/43cd-44ab).

We often find a series of signs listed more or less systematically. A typical set is a group of eleven signs. The first outer signs generally listed are shaking (*dhunana*), and trembling (*kampa*) and entry into the lower regions (*pātāla*) (see 7/43cd-44ab and note). The other eight begin, in serial order, with yogic sleep (*nidrā*) and vibration (*ghūrmi*) which concludes the series of five we examined in the previous verse. The rest are the sensation of ants crawling on the body and dancing on one limb, the ability to speak a foreign language (*bhāṣā*), tears, jumping like a deer and roaring like a lion.

They may also be grouped systematically. This is especially the case when they are related to moments, phases or stages in the process of Kaula initiation. In this perspective, we may say that Kaula initiation is a process of controlled, systematically intensified possession. Thus the KMT presents, in an ordered gradation, a series of signs that accompany the six types of progressively more elevated forms of piercing or penetration starting from *Bhūtāveśa* – Elemental Penetration – to *Śāmbhavāveśa* – Penetration by the Śāmbhava state – which is the liberated condition. The order and intensity is determined by the degree of purity the adept attains. Conversely, 'impure', that is, immoral, actions or attitudes lead down. Thus deceit and lack of devotion for the teacher and the deity results in a fall back to the first type (see KMT 10/63-120).

Another important and well known formate is the activity and rise of Kuṇḍalinī, the energy of the vital breath (*prāṇaśakti*). All early proto-Kaula traditions agree that these signs appear in the course of the awakening and ascent of Kuṇḍalinī. We have already examined an example drawn from the *Triśirobhairavatantra* in the previous note. The paradigm is more elaborately treated in the independent Kaula traditions, although the attention paid to these signs of possession (*āveśa*) decreases in the Śrīvidyā tradition. The presentation in the *Kaulajñānanirṇaya* is very elaborate. It appears to be in this respect, as it is in many others, a precursor of the Kubjikā Tantras. In a long passage (KJN 14/15-88), the KJN describes what happens to the yogi and his experience at each station of his ascent. These stations include: 1) The Root Wheel (*mūlacakra*) - Mūlakaula 2) The Foundation (*ādhāra*). 3) The Knot of Brahmā (*brahmagranthi*) (in the navel). 4) Romakūpādikaulika also called Vṛṣaṇotthakaula. 5) Vahnikaula. 6) Kaulasadbhāva in the Heart. 7) Padottiṣṭhakaula in the throat. 8) The Wheel between the eyebrows at the upper extremity of the nose. The yogi drinks the nectar that drips from there by curling back his tongue and inserting it into the cavity behind the nose. 9) Yoginīkaula. 10) The forehead. 11) Randhrakaula i.e. the Cavity of Brahmā at the top of the head. 12) The Transmental.

At each stage many of the signs of attainment (*pratyaya*) appear again, although at particular places, especially the last five, the yogi acquires special benefits. The description of what happens at the first stage will suffice as an example:

> The first is the Root Wheel. O beloved, if one practices that the sign of attainment is, O goddess, the source of great wonder. Firstly, (the yogi) trembles (*kampa*). Secondly, (he) shakes (*dhunana*). The hands, feet and head tremble and (he speaks) many kinds of languages. (He knows) all the hosts of mantras and gestures (*mudrā*) and he jumps (like a) frog. (He) quits the ground and (becomes) a poet. (He knows) the past and future. O goddess, (he) cheats death and (is able to) change form. Grey hairs and wrinkles are destroyed and, O fair lady, (he attains liberating) Flight (*khecaratva*). O fair lady, (he) attains the eight accomplishments. KJN 14/14-19

The KuKh also links these signs to the Wheels of the subtle body Kuṇḍalinī pierces in the course of her ascent (36/28-85ab). Thus, by contemplating the energy in the Wheel of the Foundation, the yogi experiences possession (*āveśa*) by the deity and other signs of attainment such as tremor (*kampa*) and paralysis (*stobha*) (36/32). He feels giddy and very drunk. He knows the past and the future. He can enter into another body, make statues move, causes explosions and can paralyse an entire army. He can be anywhere he likes in the world in a moment (36/34-5). When Kuṇḍalinī, who sleeps in between the Self-supported and the Wheel of the City of Gems awakens, the yogi's body shakes and horripilates repeatedly (36/42-3ab). By concentrating on the Self in the Heart, the adept achieves the power to hear at a great distance. He can enter into another person's body and bring statues to life. He speaks in many languages, he can paralyse an army and experiences divine possession. (36/70-71ab)

Indeed, a full realisation of any one of the Wheels leads to supreme realisation. In the very first Wheel, the adept reaches ultimate reality (36/34-6ab). By raising Kuṇḍalinī in the Wheels of the Self-supported and Filled with Gems, he attains Sadāśiva (36/48). In the Wheel of the Heart, he quickly attains realisation (*pratyaya*) (36/64) which is the union of Śiva and Śakti (36/72cd-73ab). But the ultimate condition reached through the practice of the Wheels is the Great Pervasion (36/81d-2ab, 36/109). This is, as we have seen (note to 33/47), the liberated state marked by the highest of the five signs of realisation, namely, vibration (*ghūrṇi*)

Although the texts dwell at great length on descriptions of the Wheels, Cavities, Knots and the like that mark the ascent of Kuṇḍalinī and its accompanying signs, what matters most, it seems, are the places in the body where they are located. We find numerous examples of ascents in which just the locations in the body are mentioned (see below 40/146-148). The following one is drawn from the KMT (4/70 -74):

Touch (*sparśana*), the Gaze (*avaloka*), Conversation (*saṁbhāṣa*), Vision (*darśana*), Vision of the Self (*ātmadarśana*) and Spontaneous Possession (*svayamāveśana*) O goddess, the transmission (of power) (*saṁkrānti*) has five characteristics (*pañcalakṣaṇā*).

Touch is located in the heart. The Gaze is in the throat. Conversation is in the palate. Vision is in the middle of the Drop while, O goddess, Spontaneous Possession certainly takes place in the crooked cavity (*kubjirandhra*) (at the top of the head).

While (experiencing) Touch on should know that (the body) trembles (*kampana*). (It) shakes (*dhunana*) in the course of Vision. During Conversation (it is) paralysed (*stobha*) and (the adept) knows the meaning of scripture. By Vision one attains the powers of Yoga (*guṇa*) namely, the group of eight yogic powers beginning with the power to make oneself small at will (*aṇima*) and the rest. O goddess, in the course of Spontaneous Possession, (the adept) certainly flies up (into the air). Once known the modality (*gati*) of mantra in this way, (the adept) is certainly successful.

The original source of this passage is the TS which, despite its rich presentations of states, energies and principles and their developments in paradigmatic ascents, descriptions of Wheels are missing. These versions testify to the importance of place (*sthāna*) and its power from which a variety of the realities projected into them may draw. One example we have examined at length in the introduction are the sacred seats. Entry into them is also accompanied by signs of attainment.

20. Initiation is a process of elevation to higher states of consciousness and being. As the yogi rises through successively higher levels, the lower, grosser levels merge into the higher subtler ones. Thus the ascent towards the highest state is a process of progressive merger. Once attained there is no further merger. The supreme state is the Supreme Point (*parabindu*) that pervades all things (see below 40/16-17 and 40/56). It is beyond the duality of gross and subtle, of what is merged and of that into which it merges.

21. See above, 33/47 and note.

22. In this way Bhairava introduces a long section that extends into the next chapter on the Śāmbhava form of initiation (see 33/30-31ab). This is based on the standard Siddhānta model of initiation by means of the Six Paths. This is surprising. One would have thought that just as the highest sphere of practice and realisation is Śāmbhava, the same would have been reserved for the forms of initiation that are based on the Kaula model, as we do indeed find elsewhere in the Kubjikā sources and Kaula ones in general. The reason for this anomaly is related to the manner Kaulism has evolved in the traditions from which the Kubjikā Tantras draw. A distinction is repeatedly ascerted in our sources between 'Tantric' and 'Kaula' practice. The same is naturally applied to types of initiation (see above 33/20). The Kubjikā sources repeatedly stress the pre-eminence of the latter with respect to the former (see intro, vol. 2 p. 254 ff.). But this was not generally the case in the earlier sources from which it draws, as it is not in the *Tantrasadbhāva* from which the rest of this chapter is taken. The TS extolls the 'practice of Tantra' (*tantrācāra*). It is not set in opposition to Kaula practice (*kulācāra*) as we find in the Kubjikā Tantras which repeatedly stress that their teaching is 'free of Tantra'. Thus the redactor of chapter forty-one of the KuKh needs to alter the text of the TS from which it is drawn to accommodate this change in perspective. Where the TS reads '*tantrāmnāyam*' – the teaching of the Tantras, that should not be given out to those who are not worthy to receive it – the KuKh simply reads '*upadeśam*' – 'teaching'. There are several instances of

this sort of alteration. (see, for example, 40/2-3ab and its equivalent in the TS in the notes). Clearly, at an earlier stage in the development of Kaulism, the approach was to integrate the Kaula models with the 'Tantric' to produce higher forms of Tantric practice. Thus the 'purification of the Six Paths' which is a common feature of Siddhānta, that is, 'Tantric' initiation is equated with the Kaula Śāmbhava initiation even though the latter does not require the outer fire ritual or the Six Paths.

But despite these developments, we find the same inconsistency in the Kubjikā rites of initiation. The Sixteen Consecrations of the Command (*ṣoḍaśājñābhiṣeka*) to which the *Saṁvartāmaṇḍalasūtra* refers as the basic rite of initiation is largely constructed from a 'Bhairava version' of the Siddhānta model drawn from the *Svacchandatantra* which includes the purification of the Six Paths. But, as one would expect, it also incorporates the Kaula one. Thus the goal of this initiation is the Śāmbhava state, attained by the penetration (*āveśa*) of the deity's energy. This, the liberated condition, is the climax of an ascending series of six penetrations into which the 36 principles are divided to form the six Kaula 'Paths'. See appendix 1.

23. The TS does not refer to this *maṇḍala*. The redactor has inserted a line of text here to align the rite of the TS with the Krama ritual of the Kubjikā tradition. We may assume that the *Kramamaṇḍala* is meant here. This is the topic of the Root *Sūtra* presented and discussed in chapters 26, 38 and 42.

24. *Bhūtākhyā* literally means 'the one called (the day) of the ghosts'.

25. Cf. above 33/41cd-2.

26. The north-east is the direction in which the *maṇḍala* is to be drawn (33/62). Does this mean that the Kula jar is to placed on the *maṇḍala*? Compare with chapter eleven (32cd-33ab) where one of the two jars used in the rite are indeed placed on the *maṇḍala*. The Eight Mothers and are worshipped in the eight jars (cf. below 33/80).

27. The worship of Ānanda Bhairava and his consort Ānanda Bhairavī as the deities of the sacrificial wine is a standard part of Kaula ritual in the later period of development of Kaulism as it is in the Kaula ritual of the Nepalese Newars and in Bengal. Although the goddess, as the Goddess of Wine – Surā Devī – is well known to the Bhairava and Kaula Tantras in the period in which the Kubjikā Tantras developed, her consort Ānanda Bhairava is not. It appears that the presence of this couple in Kaula ritual is emerging in this stage of its development. This is suggested by the absence of verses 72 to 77 in the TS, which felt no need to incorporate this couple in the rite.

The *Kaulāvalinirṇaya*, a latter Kaula source, provides the following visualization of them. Ānanda Bhairava is:

(Brilliant) like millions of suns and as cool as millions of moons, the god has eighteen arms and five faces, (each with) three eyes. He resides in the midst of the Ocean of Nectar seated on the lotus of Brahmā. His throat is blue (*nīlakaṇṭha*) and, sitting on a bull, he is adorned with all the ornaments. He holds an ascetic's staff and makes sound with (his) bell and handdrum. He holds a club and severed head and he makes boon bestowing and fear dispelling gestures. The God of the gods, is red and should be placed in the middle of the (wine which is) the sacrificial substance.

Next to him sits the Goddess of Wine (Surā Devī). Effulgent like a million moons, she is white like snow, the jasmine flower and the moon. She has five faces (each with) three eyes and eighteen arms, all raised and holding weapons. She is smiling and has large eyes. She sits in front of the God of the gods.

Or else one can imagine the Goddess Surā in another way. She is Vāruṇī, white like moon beams, and her nature is the Brahman. Visualize her, the supreme deity to be flowing forth from the moon (on one's own) head. Having visualized (them) in this way the hero should worship the god Ānanda Bhairava and Ānanda Bhairavī, uttering mantra. KVN 4/125cd-132ab.

Concerning Surā, the goddess Vāruṇī, see below 46/238cd-241ab and note. Note that in our text Surā is dark blue and red (46/253cd) because she is a divine representation of red wine and is menstruating (*rajasvalā*) (46/256).

28. There are probably two jars (cf. 11/32cd-35). One (called a *kalaśa*) is the residence of the main deity and the other (called *vardhanī*) is reserved for the main attendent.

29. Here the redacter has modified the text of the TS in order to make Kubjikā and her consort Navātman in the form of their seed-syllables the main deities. Thus instead of the reading '*sarvātmānam*' in the TS, in the KuKh we find '*navātmānam*' and '*parāṁ sarvākṣarām*' ('Parā, the universal syllable) is replaced by '*parā caikākṣarā'* (Parā, the One-syllable (Vidyā)). HSKHPHREṀ is regularly called the One-syllable Vidyā. (see above 9/1 ff. and notes).

30. This form befits the goddess here identified with Surā Devī.

31. The TS (9/43cd) says: As before, one should worship the host of the Mothers (who govern the) classes of letters outside (the *maṇḍala*).

vargamātṛgaṇaṁ bāhye yathāpūrvaṁ (kh: -pūrva) prapūjayet ||

32. The goddess is worshipped outside the *maṇḍala* not outside the pavilion. The Eight Mothers mentioned here are represented by eight jars (see 33/74). Presumably, the two types of alcoholic drink, one with a feminine name – *surā* – and the other with a masculine one – *āsava*, are offered to the goddess and the god, respectively.

33. This line is quite different in the TS (9/44cd), which says: 'Then having performed the rite of adoration one should address the Supreme Lord'.

evaṁ (kh, g: evāṁ) pūjāṁ tataḥ kṛtvā vijñāpet (k, g: vijñāyet; kh: vijñāyayet) parameśvaram ||

We notice that the redacter has taken care to include here the worship of the Krama, which has no equivalent in the Trika ritual of the *Tantrasadbhāva*.

34. The TS (9/45) reads: O my Lord, be without defects (*acchidra*) for me, with respect to what I have done for (this) fettered soul. O god, (may) all that be fruitful by the grace of your feet.

acchidro bhava me nātha paśvarthe yat kṛtaṁ mayā |
tat sarvaṁ saphalaṁ deva tava pādaprasādataḥ ||

35. TS (9/48ab): O beloved, one should offer libation to the scripture of the lord of the *maṇḍala* (and to the) aggregate of the Vidyās and mantras.

tarpayen maṇḍalīśāstraṁ (k, g: -śāstre; kh: -śāstra) vidyāmantragaṇaṁ (kh: -ṇa) priye |

36. TS (9/48cd-49): (One should offer libations) in the sacrificial area, the jar, the fire and, especially to oneself. The learned should perform a similar liturgy (*prakriyā*).

kalaśe tu tathāpy evaṁ (kh: yathāpyeva) adhvānaṁ pūjayet tataḥ ||
sthaṇḍile kalaśe vahnau (kh: vahnai) ātmanasya viśeṣataḥ |
kartavyā tu (k, g: kartavyāstu) vipaścidbhiḥ sadṛśā caiva prakriyā ||

37. See intro. vol. 1, p. 619 ff.

38. The Seat of Knowledge is where the scripture – here identified with the Krama – is kept as an object of worship.

39. These line and hence this part of the rite is, as one would expect, missing in the TS.

40. Here again the rite of the TS has been modified to adapt it to the Kubjikā rite. In this case this is done by inserting her Vidyā. The reader can understand where this takes place for himself. No further note will be made of such changes.

41. TS: The second (is offered) in the jar.

42. The ten parts are offered to: 1) The altar 2) The northern quarter where a jar is placed 3) The south-east 4) The Self 5-7) The three places 8) The protectors 9) The protectors of the field 10) the ghosts.

43. Concerning the 'little man of sleep' and the rest of these preparitory rites, see appendix 1 of this volume.

44. Instead of the last two sentances the TS (9/101ab) reads:

The picture (*citrā*) (?) in (the centre), in the east and in the west is preferred and the procedure is the same also in the south.

citrāṁ (kh: citrās) vābhyantare prācīm aparāṁ ca iheṣyate |

45. The KuKh reads '*puṣkaram´* (TS: *puṣkarā*). The word can mean either 'lotus' or 'lake'. As the parts of the lotus are of various colours, the latter meaning is more probable. If so, presumably this 'lake' is the background on which the lotus is drawn.

46. The following passage from here to verse 163 deals with the Six Paths and their purification in an unsystematic and cursory manner.

47. This emendation is uncertain. The MSs read *rekhāpādatale* which makes no sense.

48. The following verse tells us that the letters are 'encapsulated by the principle of withdrawal (*saṁhāratattva*). The conjunct letter KṢa which is the last in the series is appropriately associated with 'withdrawal'. The 'encapsulation' alluded to here is probably done by prefixing and suffixing each letter with KṢa, which thus serves to separate them.

49. Note that here there are said to be thirty-six Principles. Although three of the highest five do not coincide with those in the standard system of thirty-six Principles, even so the scheme is clearly analogous. Above in chapter 13 (verse 32 ff.) the principles are only twenty-five or twenty-six (see notes there). Below (in 34/29d-3ab) only thirty-two principles are listed. The *Ṭīkā*, that largely follows the SvT, accepts the standard set of thirty-six.

50. We have observed many times that this very common expression in the Kubjikā texts refers to the six aspects of the goddess who manifests in the Krama and the hexagram in her *maṇḍala* that contains it. But as the the text is drawn from the TS the original intended sense could not have been this, although it may well have been understood in this way by initiates into the Kubjikā Tantras. Here, the six parts are the Six Paths of manifestation that is, the Path of the Worlds (*bhuvana*), Principles (*tattva*) and Forces (*kalā*) and their corresponding phonemic counterparts the Paths of Mantras, Parts of Mantra (*pāda*) and Letters (*varṇa*). The process whereby they are purified is accordingly called the 'procedure in six parts' (*ṣaṭprakāravidhi*) (see 33/158-159).

51. The purified elements correspond to the Five Forces (*kalā*) Nivṛtti and the rest that contain the entire range of thirty-six Principles (see 33/154cd-5ab). Compare this initiation with that by means of Five Principles described in the *Ṭīkā* as a part of the Tenth Consecration. See appendix 1.

52. Up to here the Principles are the same as those taught in classical Sāṁkhya. The following five are practically the same as the Five Coverings (*kañcuka*) that come next in the standard system of thirty-six Principles.

53. TS: ' . . . resides at the end of the thirty-six (principles)'.

54. The Three Principles are: 1) Vidyātattva that includes the 24 principles (*tattva*) from Earth to Prakṛti. 2) Ātmatattva that includes the eleven principles from the Person (*puruṣa*) to Śakti. 3) Śivatattva that includes just Śiva.

55. TS (9/195cd): O fair lady, the (Path of the) Worlds and the rest should be fashioned by the most excellent knowers of the scriptures.

bhuvanādyā varārohe kartavyā śāstravittamaiḥ ||

56. The text is corrupt here. All the MSs read: *karṇādim āditaḥ kṛtvā*. I have emended to *kalādi*- which agrees with the reading in the TS but perhaps *kālādi*- would be better as the worlds are commonly said to be fifty ranging from Kālāgni to Śiva (see 2/41 and note). However, this emendation may also be correct as the first Energy (*kalā*) does correspond to the element Earth.

57. TS (9/199d): '. . . in accord with the desired goal (*kāmyānurūpataḥ*).'

58. Karma is defined as consisting of Dharma and Adharma. Although described here as two fetters (see below 33/173-174), we should understand them to be two aspects of the one fetter which is Karma (see above, 13/80cd-81).

59. The basic impurity – *āṇavamala* – is generically called *sahajamala*, which means both 'innate impurity' and 'impurity born at the same time (as the fettered soul)'.

60. TS: ',,, there is no liberation there for anybody'.

61. See above, note to 33/162.

62. See above, note to 13/54 and TĀ 1/43-4.

63. See above, 31/32cd-35ab, 33/46-47 and notes.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-FOUR

1. The text here may be implying that renouncers who 'live off others' are in an inferior state to the householder. But the following provisor may also be taken to refer to those renouncers whose minds, despite their condition, are still ‘smitten with attachment’. It also applies, of course, to householders in the same state of attachment.

2. Cf. below 34/97-8ab.

3. The image of the deity is usually on the right side of the Krama, which in this case is in the fire pit.

4. The triangle 'above' the altar is the fire pit. Thus the hexagonal altar with its triangular pit reproduces in three dimensions the core of the goddess's *maṇḍala* in which she burns, as in the pit, as the Vaḍavā fire along with her consort, Navātman.

5. This is the length of the human body.

6. Concerning the six limbs of the goddess’s Vidyā, see above 11/14 ff..

7. In this list of thirteen purifications of the sacrificial hearth ‘*prokṣaṇa*’ appears twice. Apparently, the two are different kinds of ‘washing’. The first is done at the beginning and the second is the penultimate purification that is coupled with an invocation of the deity and followed by the drying of the hearth and the area around it.

8. According to the SKh (MS G fl. 40a) Aghorāstra is:

AIṀ HRAUṀ [K: HRĀṀ] HRĀṀ HRAḤ AGHORĀSTRĀYA KṢAḤ

Aghorāstra is uttered first to make a place for the goddess to sit. After that comes the goddess embodied in her two seed-syllables, AIṀ and HSKHPHREṀ.

9. The Scalpel of Knowledge (*jñānaśalāka*) is probably meant here. This is the syllable HSKHPHREṀ. See note to 5/35-6.

10. The King of Weapons (*astrarāja*) is the Koṅkaṇa Weapon (*koṅkaṇāstra*). This is the sixth of the Kubjikā’s six limbs (*ṣaḍaṅga*). It is (SKh MS G fl. 43b):

AIṀ HRĪṀ ŚRĪṀ KHPHREṀ HSAUḤ KIṆI KIṆI VICCE KOṄKAṆĀYAI [KH: KOṀKAṆĀVVĀYAI] ASTRĀYA AIṀ

An extended, elaborated form is extracted in YKh (1) (1/264cd-274ab) consisting of. 42 syllables. It is as follows:

KIṆI x 2 VICCE x 3 KHIṆI KHIṆI x 4 KOṄKAṆĀVVĀYAI ASTRĀYA x 2 HUṀ PHAṬ x 2 HUṀ

This, the weapon of the west, is above all (others). It should be know by means of the teaching and the power of the scripture. If it is not repeated nothing is successful and if it is not applied (no practice) gives fruit.

koṅkaṇaṁ [k, kh, gh: kokaṇaṁ] paścimāstraṁ [k, kh: -staṁ] tu sarveṣām upari sthitam ||
upadeśena jñātavyaṁ tathā śāstrabalena [k, kh: śāsta-] tu |
nājaptaṁ siddhyate kaścin nāyuktas tu [k, kh, gh: -nnāphutastu] phalapradaḥ ||
YKh (1) 1/274cd-275

See note to 11/30-31ab.

11. This is the Samayā Vidyā. It is also called the Command and the Scalpel.

12. The Liṅga meant here is the goddess herself in the form of her seed-syllable.

13. 'Caitanya' is the name of the goddess's seed-syllable – HSKHPHREṀ (see chapter eight note 44). This is the ‘seed of emanation’ (*sṛṣtibīja*), as is Vāgbhava, the goddess's other Seed-syllable. Placing 'emanation within emanation' means, I suppose, the projection of these two syllables together into the pit. Drawn one within the other, the triangular Vāgbhava is the Yoni and the Point (*bindu*) that crowns Caitanya the ‘Wheel’ in the centre.

14. The Circle of Fire is *mulādhara*. See below 36/28.

15. See above, note to 33/133cd.

16. See below, 52/1.

17. Cf. above, 34/27cd-29c.

18. Concerning the etymology of the name Kucandra, see above, note to 7/34-35ab. Kucandra is the name of the goddess’s consort when he sits next to her (7/51cd-52ab, 69/14cd-16ab). Here, as one of the Four Siddhas, Kucandra is Oḍḍīśanātha. Elsewhere (6/181) he appears as the Siddha of Tisra, the fifth sacred seat and the consort of the goddess Vakrikā who resides there with him. Thus he is identified with Mātaṅgaka, the Siddha of that seat (6/179). Again, Kucandraśekhara, along with Mitranātha, Ṣaṣṭhanātha and Oḍīśācārya, is one of nine names of Navātman Bhairava (31/91-93ab).

19. These are the four Siddhas of the sacred seats. Thus the correspondences are as follows:

1. The Siddhas of the Four Ages

Siddha	Sacred seat	Age
Mitranātha	Kāmarūpa	Kali
Caryānātha	Jālandhara	Treta
Ṣaṣṭhanātha	Pūrṇagiri	Dvāpara
Kucandra	Oḍḍiyāṇa	Kṛta

20. The form of these mantras is probably:

(5 PRAṆAVAS) KĀMARŪPE KALIYUGE ŚRĪMITRĀNANDANĀTHA-PĀDUKĀṀ PŪJAYĀMI (5 PRAṆAVAS)

21. As usual each letter is converted into a seed-syllable by adding *anusvāra*. As each one 'arises' in serial order it is 'purified' by uttering the correponding guttural modified in the same way. Thus we get:

PAṀ KAṀ PHAṀ KHAṀ BAṀ GAṀ BHAṀ GHAṀ NAṀ ṄAṀ

22. Although the text here is corrupt and lacunous, it is clear that it is referring to the goddess of the topknot. The topknot (*cūḍa*, *śikhā*) is the tuft of hair at the top of the head that is left uncut when the head is shaved for this rite of passage which is thus appropriately called *cūḍākaraṇa* which literally means 'the act of forming the topknot'.

Kubjikā is Vidujjihvā who 'emerges from the Yoni' (26/74) and is represented by the slanting line above the triangular body of the syllable AIṀ. Just as she is in this way the 'topknot' of the syllable of the goddess, Vidujjihvā is identified with Raudrī who is the energy of the Topknot (*śikhā*) that burns like a 'tounge of flame' (*agnijihvā*) on the top of the head (10/40, cf, 31/41).

23. *Mekhalābandhana* – literally 'tying the girdle' is a more common name for this rite of passage. The 'girdle' is the *yajñopavīta*- the 'sacred thread' with which members of the first three castes are invested when they reach puberty. The same word – *mekhalā* – also denotes the cords or lines drawn around an altar, usually on the four sides of the hole or receptacle in which the sacrificial fire is deposited.

24. This line also appears below as 34/116ab. Presumably the group of four meant here are the energies Vyāpinī (= Vyāpakā), Śakti, Samanā and Unmanā. These are the energies of the seed-syllable KṢAṀ which is formed from the letter called Withdrawal (*saṁhāra*) – KṢA – and the Point, that is, *anusvāra*,

25. As the energy of the fire is identified with the goddess whose seed-syllable is AIṀ perhaps this is the seed-syllable of the fire also.

26. The five-syllable mantra is the Five *Praṇavas* recited together as one mantra (34/50).

27. I suppose that this is the visualization to which the last sentence of the previous verse refers.

28. The first *Praṇava* – AIṀ – is associated with the Brahmā, so this is probably the Brahmā Vidyā.

29. The 'aggregate of energies' is probably the syllable AIṀ which is the sonic form of the goddess's Triangle that contains all the energies of the letters.

30, The fourth *Praṇava* (KHPHREṀ) is sometimes called the Skyfarer (see above KuKh 8/101cd-103ab). But the context here suggests that it is the last of the Five *Praṇavas*.

31. The Vidyākrama is simply the Krama, which originates from the goddess's Vidyā.

32. See above, note to 34/47cd.

33. The term *'mūrti'*, which literally means 'icon' or 'iconic form', here as in many other places means simply 'mantra'. The deity and its mantra are essentially one. The deity is equally present whether it is in the form of its mantra or icon.

34. The Five *Praṇavas* are arranged around the goddess's Triangle which is lined with letters. As the word '*santati'*, which I have translated as 'family', also means 'series', it is quite probable that the 'family' to which the text refers is the series of letters on the eastern side of the Triangle.

35. The deities of the Five *Praṇavas* are arranged around the goddess's Triangle with Sadāśiva in the middle. Normally the Triangle representing the Yoni is drawn 'facing downwards' pointing west. Thus the 'head' of the Triangle is the upper horizontal line in the east, which is indeed where Īśvara is placed.

36. A '*viṣṭara*' is anything that is spread out. More specifically in Vedic rites it is a handful of rushes or grass on which the Brāhmaṇa sits in a sacrifice. In non-Vedic rites it is a seat made of twenty-five shoots of Kuśa grass tied in a sheaf.

37. Although the text does refers to the five as being in the form of '*mūrti*s', it is unlikely that icons are meant here. It is more likely that the '*mūrti*s' meant here are the sonic *Praṇavas* and that the presence of the deities is marked by their 'seats' (but see 34/97-98ab). Their arrangement can be tabulated as follows:

2. **Table of the Locations and Seats of the *Praṇavas* in the Sacrificial Area**

Praṇava	**Deity**	**Pedastal**	**Direction**
AIṀ	Brahmā	Cow dung	South
HRĪṀ	Viṣṇu	Sesame seed ball.	North
ŚRĪṀ	Rudra	Āgama	West
KHPHREṀ	Īśvara	Above the head.	East
HSAUḤ	Sadāśiva	Sacrificial Substances	Centre (in the Yoni)

38. The standard set of guardians of the quarters are: East: Indra 2) South-east: Agni 3) South: Yama 4) South-west: Nairṛti (or Daitya or Rakṣas) 5) West: Varuṇa 6) North-west: Vāyu 7) North: Kuber (or Soma or Yakṣa) 8) North-east: Īśāna.

39. Presumably, the Thunderbolt and the rest are placed or drawn in the corresponding directions to represent their presiding deities. We may tabulate the correspondences as follows:

3. Table of Directions, the Guardians and Attributes Around the Sacrificial Fire

Direction	**Guardian**	**Attribute**
East	Indra	Thunderbolt
South-east	Agni	Weapon of Power
South	Yama	Staff
South-west	Nairṛti (Daitya, Rakṣas)	King of Snakes
West	Varuṇa	Earring
North-west	Vāyu	Flag
North	Kuber (Yakṣa, Soma)	Pestle
North-east	Īśāna	Trident
Zenith	Brahmā	Lotus
Nadir	Viṣṇu	Wheel

40. The goddess is already associated with Agni in late Vedic literature. Durgā, Vairocanī, Kātyāyanī and Kanyā Kumārī appear in the *Taittirīyāraṇyaka* (10/1/7) in verses addressed to him. According to the *Muṇḍakopaniṣad* (1/2/4) the seven quivering tongues (*lelāymānāḥ sapta jihvāḥ*) of Agni are Kālī, Karālī, Manojavā, Sulohitā, Sudhūmravarṇā, Sphuliṅginī, and Viśvarūpī.

41. This is the *Saṁvartāmaṇḍala* or, to be more precise, the triangle in the centre of it. See note to 2/18 and 7/46.

42. The 'eight energies' are probably the Eight Mothers.

43. After the fire, the fire pit, the area around it and the five faces of the fire have been purified and energized with the limbs of the Samayā Vidyā, the Five *Praṇavas* and related seed-syllables and mantras, the officiant should purify

himself. This is done in the usual way with the deposition of mantras. These are: 1) the fifty letters of Mālinī (see chapter 18) 2) the Five Limbs of the Siddhas, i.e. the Five *Praṇavas* (see 11/42cd-44ab) 3) Trikaṇṭhaka – this is so-called big Samayā Vidyā in three parts (*khaṇḍa*). The body is thus energized ('made *sakala*'). Although this procedure is meant only to purify the officiant to prepare him for the goddess entry into his body he should already begin to exhibit the usual signs of possession, such as trembling and shaking of the body, to indicate that it is beginning to take place.

After the depositions the officiant recites the mantras presented in code in the following verses. Uḍanātha is, presumably, the fire whose five faces are the goddesses listed above. The following verse enjoins, it seems, that the same depositions projected onto the officiants body should also be projected onto the First Nātha who is the Bhairava in the midst of the fire. Thus he is also energized in the same way and ready for penetrating union with the goddess. When the fire is finally prepared through the following process of projection and visualization the goddess is brought down into it with the mantra used to purify it. She descends through the officiant along Suṣumṇā – the Path of the Moon – who is consecrated in this way with the Command. The officiant now places the Command, embodied in the goddess, before him in the fire by means of her mantra. In this way the fire and Uḍunātha is purified and the officiant experiences the signs of attainment. Then everything is ready for the offerings to the fire.

44. The fire is ignited with the King of Weapons (34/119), that is, the sixth limb of the goddess's Vidyā called Koṅkaṇāstra. (see above, note 10)

45. Perhaps the Vidyā here is Trikhaṇḍā, which is in three sections.

46. The mantra called Candragarbha is also used to sprinkle the fire pit (*siñcana*) (34/10) and for the rite of impregnation (*garbhādhāna*) (34/24),

47. The eight purifications are those listed above in 34/59-60.

48. Similarly, the signs of attainment manifest spontaneously by just recollecting the Command (7/43cd-44ab).

49. '*rājānnam'* as a kind of rice that grows in Andhra.

50. It is universal, standard practice to make one 'measure' (*mātrā*) of the offering to the fire after every ten repetitions of the mantra. This offering is called 'the tenth part'.

51. Now everything has been purified and the deity is present in the fire the officiant is ready to make the offerings. First he raises Kuṇḍalinī within himself with the resonance of the Vidyā. Then he projects her internally into the Triangle within the End of the Twelve at the apex of his own subtle body and externally into the outer Triangle of the fire pit. He fixes his mind on the goddess and she penetrates him and all the sacrificial area. Then he makes the offerings to the fire as he recites the Vidyā counting the times he does so with a rosary. This he does in the usual way: first forward until he reaches the bead in the centre and

then backwards until he comes to it again (see below 34/125-127). Thus he reproduces and induces the 'coming and going' – rise and descent – of the Kuṇḍalinī within himself and the macroscosm.

52. Cf. below 34/107.

53. Once a year during the rainy season between the months of Āṣāḍha and Kārttika, Kaulas observe the Festival of the Garland (*damanotsava*), when the deity is offered a sacred thread (*pavitraka*) to atone for the sins committed during the year. Half of chapter eight of the KRU is dedicated to how the sacred thread should be made and the rite performed. It is also described briefly in chapter 27 of the ŚM.

54. Concerning the sacred lunar days, see the notes to 27/25-26 and 30/46cd-47ab.

55. Cf. above, 34/3.

56. The Arka is the *calotropis gigantea*,

57. The Hayāra, also called *hayakantharā* or *hayārikā*, is the *physalis flexuosa*

58. The usual seed-syllable of Fire is RAṀ.

59. *Guggulu* is bdellium or the exudation of *amayris agollochum* – a fragrant gum resin, used as a perfume and medicament.

60. Similarly, YKh (1) prescribes for its fire sacrifice that:

(The wise) know that the offerings to the fire should the measure of a cat's foot only. If less, then one is reduced to begging (*durbhikṣa*) and excess there is loss of wealth. One should not make offerings to the fire without clarified butter, otherwise energy (*tejas*) is certainly lost.

mārjārapadamātraṁ tu āhutīnāṁ viduḥ [k, kh, gh: vidā] sadā ।
nyūnaṁ [k, kh: yatkarna; gh: yakune?] caiva durbhikṣaṁ adhikaś [k, kh: adhiko; gh: adhike] cārthanāśanam ॥
ghṛtahīnaṁ na hotavyaṁ tejohānir [k, kh: teja-] na saṁśayaḥ ।
YKh (1) 1/18-19ab

One wonders whether the measure of a cat's foot is the size of a monkey's testicle.

61. A *pala* weighs 4 *karṣas*, that is, 1/100 *tulā*.

62. A *prastha* is a weight equal to 32 *palas*.

63. Concerning the Vidyā called the Three Thorns, see intro. vol. 1, p. 452-453.

64. This line also appears above as 34/43ab. See the note there to the translation.

65. Perhaps the syllable KṢRAṀ repeated six times is meant here.

66. Kubjeśī is represented by her syllable AIṀ.

67. Concerning *bali* offerings see above 11/33cd-34ab.

68. The fire sacrifice of YKh (1) enjoins that the two spoons undergo a series of purifications, which it lists as follows:

Next I will tell (you) about the big and little spoons, according to the manner of worship. The rites are those of bringing the spoons, looking (at them), sprinkling, grasping (them), heating (them), placing them facing each other, the deposition of the Three Principles in one, the tying of the thread by the union of Śiva and Śakti, cleaning, purification, displaying the gesture and the deposition of the energies. (Thus) you have been told about the purifications (*saṁskāra*) of the big and little spoon. They should be worshipped with Śikhārāja, Caitanya and the *Praṇava*. Having done so, pick them up with the left hand.

*ataḥ parataraṁ [k, kh: paraṁ-; gh: pa * -] vakṣye [k, kh: vakṣe] śruk [kh: śrukra] śruvaṁ [k, kh, gh: śruve] ca yathārcanam [gh: -rcaṁrna* ||

praṇavaiś ca tataḥ pūjya vāmahastena gṛhnayet || YKh (1) 1/234cd-238

69. 'Going' is the forward direction. 'Coming' is the reverse. The mantra is repeated counting the beads first forward up to the main bead, called Meru and then backwards back to the Meru. See note to 3/122cd-3ab.

70. Cf. above, 11/58.

71. Apāmārga = *Achyranthes Aspera.* Śārdūla = *Plumbago Zeylanica.* Somarājī = *Vernonia Anthelminthica.* Pippala = *Ficus Religiosa* (the Peepal tree). Īśvara is the name of several plants. Brahmā = *Clerodendrum Siphonantus.* Jīmuta = *Luffa Foetida* and Meghavāhana = *Cyperius Rotundus.*

72. No mention is made of any sacrificial fee in the case of the regular rite, presumably because the householder does it himself.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-FIVE

1. Perhaps by *Gahvara* is meant the *Kulagahvaratantra* which is the source of KuKh 31/11cd-26a. Or else *'Gahvara'* may be a category of Tantras.

2. See note to 24/3cd-4.

3. Cf. above, 35/10 where it is clear that these three levels correspond to the sides of the goddess's Triangle.

4. See intro. vol. 1, 24 concerning the identity of Kuṇḍalinī as Nāsāśakti – the 'energy of the nose'.

5. Cf. 35/38.

6. These are the Six Yoginīs – Ḍākinī, Rākinī, Lākinī, Śākinī, and Hākinī with Yākinī as the seventh (see below 63/16-23ab). They constitute a well known group called Yoginīṣaṭka or Ḍādiṣaṭka (see 44/28-31 and note). Externally they are worshipped in the corners of the hexagram within the *maṇḍala* with Yākinī in the centre. Here they are projected into the Six Wheels in the subtle body. In the later representations of these Wheels there presence within them is one of their standard features. However, this is not the case in the Kubjikā Tantras, although, as in this case, the link is made. The link is justified because they share a common 'foundation'. This is the hexagram, into the corners of which the Six Wheels, like the Six Yoginīs, are projected. See, chapter sixty-three which is dedicated to them.

7. The '*parigraha*' is the 'enclosure' formed by the sides of the goddess's triangle. See chapter 7, note 86.

8. The Wheels, in this context, are related to the sacred seats from which emanate the teachings and the creative energy of the goddess. They are described in the descending order, which is that of emanation (*sṛṣti*). Below 35/48 ff. they are described in the ascending order. The sequence there ends with the Triangle that contains the sacred seats and is the condition of the goddess without form. In this case the sacred seats are positioned in the hexagram that emanates out of the central upper triangle. In this context the Island of the Moon is the Point in the centre (cf. 35/66 and note) although normally it is the Triangle. The Command is located in the Point above the Half Moon (35/66).

9. 'Half of Half of Ha' (*hakārārdhārdha*) is the Point. See intro. vol. 1, p. 352.

10. Oḍḍiyāna is in Point in the centre of the Triangle. Directly below it is the Half Moon. The former is the Full Moon and the latter the New Moon. Perhaps the Fire of Time is the energy of the New Moon. The nectarine lunar energy of the goddess flows down from there through Suṣumṇā into the uvula at the back of the throat in the 'cavity of the palate'. See note to 3/102.

Collectively these three form the 'supreme seat'. This is Oṁkāra / Oḍḍiyāṇa. Normally these are two names for the same seat but here they are distinguished. The former denotes the Point, that is, the lunar Drop and the latter the Half Moon below it. These two form this seat along with Cavity of the Palate through which the nectar released from them flows, In this way the four sacred seats occupy six places and so run parallel (although they do not perfectly coincide) with the Six Wheels.

11. This Triangle, lined with the letters and located in the Wheel of the Foundation, is the counterpart of the one in the End of the Twelve. Note that four Wheels are worshipped in the central Triangle of the *maṇḍala*. All six Wheels are then worshipped in the hexagram that surrounds it.

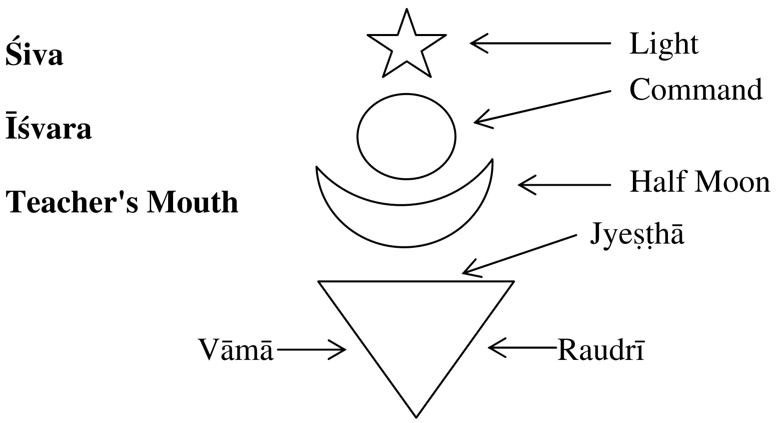
Left	Kāmarūpa	Will	Self-supported	Lower	Rākinī, Dākinī	Vāmā
Right	Pūrṇagiri	Action	Anāhata	Middle	Kākinī, Lākinī	Jyeṣṭhā
Middle	Uḍḍiyāna	Knowledge	Nose	Upper	Hākinī, Śākinī	Raudrī
Centre	Ujjain	* * *	Point			* * *

16. The four sisters Jayā, Vijayā, Ajitā and Aparajitā form a standard group (with the usual variations in their names) both in the Tantras and the Purāṇas. In the Tantras they are especially associated with Tumburu Bhairava who is their brother and the principle deity of the Vāma Tantras. See Dyczkowski 1988: 113 and 150 n.181.

17. The expression *sthitānte* may also means 'she who abides within' the Point. In the same way, the expression '*īśvarānte'* in the following line can mean both 'within' and 'at the end' of Īśvara. But it is clear there that the second meaning is the one intended.

18. The following are nine energies generated by the Supreme Power that radiates from the End of the Twelve. They produce the nine letters of Navātman, that is, his 'ninefold body' (39/68).

Diagram 2. Śiva, the End of Sixteen and the Teacher's Mouth at the End of the Twelve



19. Presumably, Śakti is ninefold and Śiva, the power-holder, is the tenth, thus making two basic categories (*bheda*).

20. Cf. 35/57.

21. The eleven Rudrāṇīs are aspects or portions of Rudra located symbolically in the first eleven finger spaces between the Cavity of Brahmā at the crown of the head and the End of the Twelve. Each of them induce a state or sign of attainment (*pratyaya*) in the step by step ascent to the supreme attainment that takes place at the End of the Twelve where the one energy merges. Note also that the Rudrāṇīs embody the energies that give rise to a standard set of eleven signs of attainment (*pratyaya*). Cf. above 13/100-102.

22. See above 28/144-148.

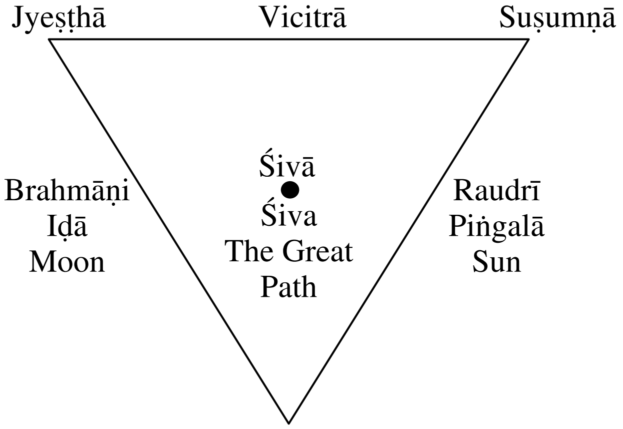
6. Table of Polarities

POSITION	Polarity	Goddess	Channel	Celestial Body
Left	Śakti	Brahmāṇī	Iḍā	Moon
Right	Śiva	Raudrī	Piṅgalā	Sun

24. See above, note to 2/14.

25. Above (36/58) the Blue Lotus is said to be in the heart.

Diagram 3. The Blue Lotus



26. The text can be read two ways. One is as I have translated namely: *sadā śive layaṁ gatā*. Another is to read: *sadāśive layaṁ gatā* – (she) 'has merged into Sadāśiva'. I have chosen the first alternative because the seeming paradox suggests a subtle vision of the goddess who, as Kuṇḍalinī is both moving on the

Great Path of Suṣumṇā and yet is perpetually merged in Śiva, one with him. Thus Kuṇḍalinī is called Śivā – the 'female' Śiva. Note that she is also said to be Śivā, not only because she merges into Śiva but also because she emerges from him as his absolute will (see above, 35/8).

27.

7. A Table of Triads

Gods	Goddesses	Channels	Energies	Qualities
Brahmā	Vāmā	Iḍā	Will	Sattva
Viṣṇu	Jyeṣṭhā	Piṅgalā	Knowledge	Rajas
Maheśvara	Raudrī	Śivā	Action	Tamas

28. Jayā and Vijayā along with Ajitā and Aparājitā form a well known group of four. In this case it may be that there are three goddess associated with Jayā on the left and three linked to Vijayā on the right, to make a total of eight.

29. The Eighteenfold Transmission is the Divine Current (*divyaugha*) of teachers described in chapter 57. It is divided into groups of four, five, six and three. The first group has been explained here. The remaining three are the subject of the following verses. Here the eighteen are represented in their immanent counterparts embodied in goddesses. The subject of chapter 57 is their inner, transcendental form. See above, note to 2/20cd-21.

30. The Five Brahmās are the Five *Praṇavas*. They are the five states which correspond to the Wheels in the body and their corresponding Voids. They are related to both Bhairava (3/99) and his energy (3/44). See notes to 2/20-21ab and 3/92cd-93ab.

31. For the five goddesses beginning with Vimalā see below 44/25-27. For the five states, see below 36/89.

32. Vāmā is in Iḍā, Jyeṣṭhā is in Piṅgalā and Raudrī is in Suṣumṇā (40/133). See above note to 7/13 ff. and 14/61-62ab. In this case the *ṣaṭkabheda* is the group of Six Yoginīs, Dākinī and the rest (*ḍādiṣaṭka*). They are the subject of chapter sixty-three.

33. Vāmā, Raudrī, Ambikā and Jyeṣṭhā normally make up this common group of four.

34. Presumably the sixty-four goddesses are the sixty-four Yoginīs and the thirty-two mothers (*prajātikā*) are the Yoginīs who preside over the syllables of the goddess's Vidyā.

35. See above, note to 34/47cd.

36. The eight goddesses of the eight Kulas are normally the eight Mothers. See below, 42/39cd-42 for a parallel group of eight Kula Yoginīs (*kulāṣṭaka*) associated with the eight Mothers. Just as sixteen goddesses are associated with

the Moon and twelve with the Sun, presumably, the eight goddesses of Kula are linked with Fire.

37. The colophons almost invariably read *ādyāpīṭhāvatarite* – 'it has been brought (down to earth) into the first sacred seat.' But here most MSs read: *ājñāpīṭhāvatārite*- (it has been brought (down to earth)) into the sacred seat of the Command.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-SIX

1. Clearly, the Command of Ritual Observance (*anuṣṭhājñā*) is another name for the Command of *Nirvāṇa* (*nirvāṇājñā*).

2. *karṇāt karṇagataṁ* literally `from ear to ear'.

3. Cf. the Vaiṣṇava's devotee's state in note 25 of chapter 31 above.

4. Concerning Vṛkṣanātha see above 2/29-30ab.

5. Cf. AS 20/16cd-20ab quoted in note to 27/20-21.

6a. The Wheels are also described in 3/103cd ff., 25/5 ff. and 35/35cd ff..

7. Concerning the signs of attainment, see above notes to 33/47-49.

8. The stick of the vital breath, also called the Stick of Energy, is the flow of inhalation and exhalation. (See below 36/59; 36/82cd-83ab). Mahāmudrā is one of five gestures that make energy move through the body (*śakticālanamudrā*) described in the *Gorakṣaśataka*. Although this is a later text and not a Tantra, it contains much that has been carried over from earlier Tantric traditions that have been lost. The *Gorakṣaśataka* explains:

The purification of the collection of the channels (of the breath) (*nāḍī*) (that takes place by) the motion of both the Moon (of exhalation) and the Sun of (inhalation) along with the drying up of the liquids (*rasa*) (in of the body) is called the Great Gesture (*mahāmudrā*). (58)

Having rested the chin on the chest, and pressing for a long time the Yoni (in the Root centre) with the left big toe, with the two hands grasping the extended right foot, having filled both sides of the abdomen with breath and having held it, one should expell it slowly. This is said to be the Great Gesture, the destroyer of the diseases of men. (59)

Having practiced it first with Iḍā and then with Piṅgalā an equal number of times, (the yogi) should discontinue the (practice of this) Gesture. (60)

(When one has mastered this practice there is) neither wholesome nor unwholesome (food) (for him). All tastes are indeed tasteless. Even deadly poison (when) eaten is digested like nectar. (All) diseases (including) consumption, leprosy, constipation, enlargment of the spleen, and the decrepitude (of old age) end for one who practices the Great Gesture. (61-62)

The practice of Mahāmudrā is an example of a *bandha*. *Bandha*s lit. ‘checks’ or ‘blocks’ serve to block the movement of the vital breath in its usual course and force it to follow a different one. The change in the movement of the vital breath brings about a change both in the body and in consciousness insofar as their state reflects the form and course of this movement. This is a technique of Haṭha Yoga. The Mahāmudrā taught in the KMT is different. The Kubjikā Tantras do understand the principle that is the basis if Haṭha Yoga, namely, that alterations in the body or the breath induce changes in consciousness. But externally these are limited to hand gestures, although inwardly in their subtle and supreme aspects they are vitally linked to the activity of the Kuṇḍalinī, the vital breath and consciousness. These gestures, like mantras, form a part of ritual. Just as mantras have a much more extensive inner nature grounded in consciousness than their mere physical sound, so do ritual gestures. Neither mantra nor Mudrā are conceived in the early Tantras to have a direct physiological effect but rather are understood to be manifestations and vehicles of the activity of Śakti. Even so, there is one important technique of the sort that in later Haṭha Yoga would be called a *bandha*. This is the practice of contracting the anus to force the descending breath (of *apāna*) back up through the channel of Suṣumṇā in order to stimulate the awakening of Kuṇḍalinī. Woodroffe (1997: 205-206, 209) explains that:

> *Sthiratā* or fortitude is acquired by the practice of Mudrās. The Mudrā dealt with in works of Haṭha Yoga are positions of the body. They are gymnastic, health-giving, and destructive of disease and death . . . . They also preserve from injury by fire, water, or air. Bodily action and the health resulting therefrom react upon the mind, and by the union of a perfect body, *siddhi* is by their means attained. Mudrā is also described as the key for the opening of the door of Kuṇḍalinī-Śakti. [. . .] The term Mudrā also includes what are called *‘Bandha’* (bindings), certain physical methods of controlling *Prāṇa*.

Woodroffe goes on to describe *Uḍḍiyānabandha*. This is a common and typical *bandha* that displays the main features of this type of yogic practice. We notice that forced control of the breath (*prāṇāyāma*), another common Haṭha Yoga technique absent in the Kubjikā and other early Tantras, plays an important role in the execution of this *bandha* as it does of the others. This feature is all the more stricking and in contrast with the practice taught in our Tantras because this *bandha* requires the contraction of the anal sphincter, which, as we have noted already is well known to the early Tantras but there is not combined with breath control. Moreover, we notice that even the later *Haṭhayogapradīpikā*, to which Woodroffe refers in the following passage, continues to sustain the earlier view that Kuṇḍalinī rises, not from the Wheel of the Foundation but from the region below the navel, as do our texts. Woodroffe writes (1997: 210)

> The lungs are emptied by a strong expiration, and drawn against the upper part of the thorax, carrying the diaphragm along with them, and Prāṇa is made to rise and enter Suṣumṇā. Through Mūla-Bandha the Prāṇa and Apāna unite and go into Suṣumṇā. Then the inner 'sounds' are heard, that is a vibration is felt, and Prāṇa and Apāna, uniting with Nāda of the cardiac Anāhata-Cakra, go to the heart, and are thereafter united with Bindu in the Ājñā. In Mūlabandha the perinaeal region (Yoni) is pressed with the foot, the rectal muscle contracted (by Aśvinī Mudrā), and the Apāna drawn up. The natural course of the Apāna is downwards, but by the contraction of the Mūlādhāra it is made to go upwards through Suṣumṇā when it meets Prāṇa. When the latter Vāyu reaches the region of fire below the navel (*vahner maṇḍalaṁ trikoṇaṁ nābher adhobhāge Haṭhayogapradīpikā* v. 66), the fire becomes bright and strong, being fanned by Apāna. The heat in the body becomes very powerful, and Kuṇḍalinī, feeling it, awakens from Her sleep 'just as a serpent struck by a stick hisses and straightens itself'. Then it enters Suṣumṇā.

Finally, we notice that the effects of forced breath control (*prāṇāyāma*) are similar, if not the same, as the effects of the rise of Kuṇḍalinī described in our texts. But here, the rise takes place without the use of physical force or restraint. Thus Woodroffe (ibid. 216) tells us that: 'the Sādhaka passes through three different stages in Sādhana which are similarly named. In Adhama [breath control] perspiration is produced, in Madhyama tremor and Uttama done for 100 times is said to result in levitation.'

9. Sadāśiva is identified below with Haṁsa, the Self, who resides in the Wheel of the Heart (36/58).

10. The Stable Place is identified below with the Wheel of the Command. See 36/88cd-89 and 36/95-98ab. Liberation is attained by going beyond the six

(see, for example, 36/110). So, just as here, we find in YKh (1) and the ṢSS that *Dhruva*, although a very elevated stage is not the ultimate one.

11. The Gander is Haṁsa, the Self manifest in and through the vital breath that sustains the body through it inner Unstruck Sound and is the Supreme Deity which is every individual soul's ultimate and true identity. Banerjea (1962: 165-166) explains:

> When we breath out, the breath exits making the sound HAṀ. Conversely, when inhaling, it enters making the sound SAḤ. In this way every person spontaneously and constantly repeates the mantra Haṁsaḥ in every state of consciousness. The sound HAṀ is AHAṀ. That is, 'I' the individual Self. SAḤ is 'he' – the Supreme Self. Thus with every exhalation the individual Self frees itself from the body and goes out into the universe outside and there identifies with Śiva, the Self of the Cosmic Body. Similarly, conversely, when inhaling, the Self of the Cosmos – Śiva – enters the body and reveals himself as AHAṀ, the individual Self. If exhalation is supposed to precede inhalation, the mantra is HAṀSAḤ. If inhalation is supposed to precede exhalation, it becomes SO 'HAṀ. Both mean 'I am He' or 'He is me'

12. A night of the New Moon that falls on a Monday or Tuesday is called '*puṣkara*'.

13. Concerning the Stick of Energy, which is also called the 'stick of the vital breath' see above, note to 36/41. Unstruck Sound is the Nameless, the Gander which is the union of Śiva and Śakti – see below 36/72cd–73ab.

14. This passage is also found in the KMT and its related sources (KuKh 36/60cd-63ab = KMT 11/22cd-25ab = ŚM 15/28-30 = ṢSS 18/34cd-36). There too the ten sounds are related to the Wheel of Unstruck Sound. There is no mention there, however, of the Gander, instead, the sound from which they derive is generated by the aggregate of the sounds of the fifty letters contained in the Wheel below it. Resonating there in a potential 'unstruck' form, these are the fifty gems that fill the City Filled with Gems (*maṇipura*).

The account in the ṢSS adds a few details to the one in the KMT from which it is derived, moreover it is glossed by a brief but helpful commentary. So it is to that version that we turn. Here it is:

> These Unstruck Sounds (of the fifty letters in Maṇipura are, collectively) emanation *(sṛṣti)* that arises by the (inner) utterance of the letters. It resounds tenfold and gives cosmic bliss. It enters (and resonates) in the channel (*nāla*) of the Knot and in the eight petals and calyx (of the lotus of the heart). The speaker of (this) group of sounds (*śabda*) beginning with `*ciṇi*' is the Great Lord. I will tell (you) of that state. Listen to the true sign of its accomplishment (*pratyaya*).

The ṢSS continues after listing the ten sounds:

The tenfold sound that functions without being struck is this, your knowledge which is Unstruck Sound that has emerged from the crooked (cavity) of the ear (*karṇakubja*). Located on top of the eight petalled lotus, it resounds in this way tenfold. That City extends for tens of billions of leagues.* ṢSS 18/32-34ab, 37-39ab

*KMT: Extending for tens of billions of leagues, it is the Heart of consciousness (*cit*) and the perceiver (*cetṛ*).

anāhatāś ca tāḥ sṛṣṭir varṇoccārāt prajāyate ।
nadate daśadhā sā tu viśvānandapradāyikā ॥
nālagranthau dalāṣṭāsu karṇikāyāṁ punar vrajet ।

hananena vinā yena vyāhared daśadhā ravam ॥
etat te' nāhataṁ jñānaṁ karṇakubjād vinirgatam ।
daśadhā rauti evaṁ tu aṣṭapatroparisthitam ॥
daśadhā guṇakoṭis tu vistīrṇaṁ tat puraṁ sthitam [KMT: ciccetāhṛdayātmakam] ।

Commentary: ‘It resounds’, that is, makes a sound (*śabda*) that gives bliss to the universe with its ten kinds. There is an eight-petalled lotus in its place. Eight sounds are on these petals. Similarly, there is a sound (*nāda*) in the channel of the knot. Thus it makes ten kinds of sound. [. . .]

What is the Wheel of Unstruck Sound? The ten sounds resound of themselves and (so) they are then unstruck (sounds). Again, they are perceived through the path of the ear. Its location is ten fingers (in size) and it is said to be (the Wheel of) Unstruck Sound because of (these) ten (sounds). For this reason everything related to that (in this way) has been conceived to be tenfold.

nadate śabdaṁ karoti daśaprakārais tathā viśvasya ānandaṁ dadāti iti ॥ *tasya sthāne aṣṭadalapadmaṁ vidyate* ॥ *teṣu daleṣu nādāṣṭakam* ॥ *tathā nālagranthau nādaḥ* ॥ *tathā karṇikāyāṁ nādaḥ* ॥ *iti daśadhā śabdagatiṁ karoti* ॥ *[. . .]*

The same ten sounds are listed in the BY in an identical passage which the KMT, directly or indirectly, draws from (see comm. to TĀ 5/99). The BY knows nothing of the Six Wheels. According to the BY, these sounds are heard by the ‘inner ear’ in three centres in the body not just the Heart. Abhinava quotes for us the context in which this passage appears in the BY. We notice how doctrine (and the inner yogic experience it is based on) develops in the Tantric sources. Jayaratha’s commentary supplies the typical sophisticated exegesis that reveals the hidden depth latent in the original teachings by the discovery of the ultimate identity of Unstruck Sound as the reflective awareness of universal consciousness. So here again we find Haṁsa, who is the lord and embodiment of Unstruck Sound, now identified with pure ‘I’ consciousness spaning all the levels not just of Sound (*nāda*) but, more essentially, Speech (*vāc*) which is pure reflective awareness (*vimarśa*). Here is the text:

As is said in the venerable *Brahmayāmala* – the venerable Sound (*rāva*) is of ten types. It issues from the heart, neck and palate (each of which is) gross, subtle and supreme. Again, present everywhere (in all these types) is the All-pervading (Sound) (*vibhu*) that bestows the state of pervasion (*vibhutva*). The great yogi who has conquered Sound and is established in the supreme body (of Sound) must ascend (to ever higher levels) and so attain the supreme state of pervasion. This he should practice daily until the resonant (power of consciousness) (*rāvinī*) starting from Sound merges into Silence (*arāva*). (TĀ 5/97cd-100ab)

Jayaratha comments: It is venerable as it is self-awareness which is the very life of even the light (of consciousness). This sound of the nature of Supreme Speech (*parā vāc*) is the reflective awareness of ‘I’. It is the first. It is threefold as the Heart etc. in the form of Paśyantī, Madhyamā and Vaikharī. Each one of these is threefold according to whether it is gross, subtle or supreme. Thus it has nine varieties. The tenth is Parā Vāc which is the substratum (*bhitti*) of the nine for it manifests thus out of its own innate freedom and this is said to be the `the all-pervading (Sound) present everywhere’. Moreover it is the locus of repose and so is said `to bestow the state of pervasion'.

[. . .] Thus one should practice daily in this way there as long as the power of reflective awareness which is Supreme Speech manifests as each form of Sound and so, the resonant (power of consciousness) (*rāviṇī*) starting from Sound, destroying one sound after another by doing away with all distinctions, merges into Silence (*arāva*), that is, comes to rest in its own essential nature which is the reflective awareness of ‘I’.

15. The Pure Principle is the subject of the passage that extends from verse 53 to 86ab. This is the Gander located in the Heart. It is above the Wheels of the Foundation, the Self-supported and the City of Gems and is followed by the Wheel of the Command (36/86cd-87ab). It appears that the Pure Wheel (*viśuddhicakra*) in the throat has been omitted, but this is not the case. The

'sequence of the Six Wheels' remains as it is (36/88cd-89). The region below the Heart is where Kuṇḍalinī rises in its potential 'invisible' condition until it begins its 'visible' (*sākṣāt*) ascent from the Wheel in the navel. In the Heart it is the Gander of Unstruck Sound which is experienced in two ways. One is the Heart itself as forms of Unstruck Sound. The other is as nectar that flows from the centre in the uvula (*lambakā*) that hangs from the palate at the back of the throat. Although this is the Pure Wheel, it is treated as part of the sphere of activity of the Gander in the Heart. Whilst continuing to reside there in the form of the Flame of the Self who is the male deity, it merges first into the centre in the palate where it releases its lunar nectar and then into the End of Twelve. But as this process forms a part of the contemplation of the Self in the Heart, the Flame continues to remain there, even when it rises into the higher centres where it is, as in the Heart, the object of the yogi's contemplation.

Analogously, the Tantra treates the Wheel of the Command as the Stable Place to which Kuṇḍalinī rises and then, piercing through it goes beyond. In this case also nectar flows from the centre in the palate but this time Kuṇḍalinī drinks it (36/93), whereas in the process relating to the rise in association with the Wheel in the Heart, the adept does so (36/82cd-86ab) and the process stops there even though in order to achieve this, Kuṇḍalinī must first rise to the summit of the End of the Twelve. The subject of this presentation of the Wheels is not the Wheels themselves; it is the experience of Kuṇḍalinī – the 'Pure Flame'. The text alternates between descriptions of these two modalities – Kuṇḍalinī's movement through the Wheels and her abiding presence within them. Special attention is paid to her movement in relation to the Wheel of the Heart and her presence within it that makes this rise possible.

16. Same as above 36/58 and 36/80.

17. Kuṇḍalinī is like a flame (40/95). She moves upwards like a steady flame in a sheltered place (40/98-99ab).

18. A similar flame is said to be in the Wheel of the Foundation, the Root Wheel (36/28). Thus there are three flames at a a distance of twelve fingers breadth from one another, that is, in the Foundation, the Heart and the End of the Twelve.

19. Same as above 36/58 and 36/67.

20. Cf. below 36/109. Notice how very high levels of realisation are achieved by means of each Wheel directly.

21. The curling back of the tongue is a very old yogic practice dating back to the early Upaniṣads. The *Maitryupaniṣad* (6/20 and 6/21) quotes an earlier source as saying:

By pressing the tip of his tongue against the palate, by restraining voice, mind, and breath, one sees Brahman through contemplation. [. . .] By causing the tip of the tongue to turn back against the palate and by binding together (*saṁyojya*) the senses, one may, as greatness, perceive greatness.

In the earlier *Taittirīyopaniṣad* (1/6/1), the uvala is the place where Indra, who stands there for the individual soul, is liberated:

> This space that is within the heart – therein is the person, consisting of mind (*manomaya*), immortal, resplendent. That which hangs between the palates like a nipple – that is Indra's place of exit.

This practice is especially recommended in a wide variety of sources as a means to stay healthy, slow down the aging process and live a long life. In later yogic texts attributed to Gorakhanātha and others, this practice was considered so important that it was called the Gesture of the Skyfarer (*khecarīmudrā*). Thus it was indenfied with the Gesture that in the early Kaula and Bhairava Tantras was the acme of all the Gestures. Here, this practice has not been given a particular name. Nor is it especially associated with the liberated condition of flight. Indeed, it appears that the older practice of the Gesture of the Skyfarer was forgotten and the name transferred to the practice described in this verse.

The later sources identify the Skyfarer with the tongue that, turned upwards into the cavity behind the nostrils, moves about in that space. This artificial explanation of the name of this practice supports the hypothesis that it was arbitrarily ascribed to a practice that in the early period was of relatively minor importance. Perhaps this was because the original practice of the Gesture of the Skyfarer was forgotten as was the method of producing and consuming nectar directly from the Wheel in the palate.

According to the *Gorakṣaśataka* it is as follows:

> By turning the tongue backwards into the hollow in the head (behind the cavity of the nose) (*kapālakuhara*) and by fixing the sight between the eyebrows the Gesture of the Skyfarer is performed.
>
> Neither disease nor death nor sleep nor hunger nor loss of consciousness (*mūrcchā*) is there for him who knows the Gesture of the Skyfarer. He is not troubled by affliction; he is not besmeared by his own action (*karman*), he is not troubled by death who knows the Gesture of the Skyfarer. The mind (*citta*) wanders in the space (between the eybrows) because the tongue having entered the space (in the hollow of the head) moves about (*carati*) For that very reason the Gesture of the Skyfarer is respected by all accomplished adepts (*siddha*).
>
> The (lunar) Drop (of sperm) is the cause of the body. The channels (*śīra*) that vitalise the body, from head to foot, are all established there. The Drop of one who seals the cavity above the uvula with the (Gesture of) the Skyfarer does not

fall (even if he) is embraced by a passionate woman. As long as the Drop remains in the body there is no fear of death.

As long as (the yogi maintains his) practice of (this) the Gesture of the Sky, the Drop does not move. (But) even if the Drop (happens) to reach the Fire (in the Yoni), it moves up arrested by the energy and checked by the Gesture of the Yoni. GS 64-70 translation (with modifications) by Briggs (1973: 297-298); see also A.K. Banerjea: 186-187.

22. These five states are arranged in a sequence (3/92cd-93ab). They are states the deity assumes (3/95cd-96) and are gathered together within him in the Stable Place, that is, the Wheel of the Command (36/95-96) where he resides in this fivefold form. In the following passage they mark the phases in the ascent and transformations of his energy, Raudrī as she moves through the subtle body.

23. In the Pāśupata system, the Stable Place was the highest of the series of worlds through which the observer of the Pāśupata Vow inwardly ascended. Here, some centuries later, its eminant status has been preserved and extended. Now, instead of Rudra, his energy stands supreme – Rudraśakti – who was identified in the early Trika with the Supreme Goddess and is here identified with Kubjikā.

24. The yogi is in the Wheel of the Foundation. To his left and right are the Sun and Moon, the two breaths, coursing through Iḍā and Piṅgalā. Here he experiences the emergence of Raudrī's energy, that is, Kuṇḍalinī, rising up through the central channel of Suṣumṇā where the other two channels meet.

25. As Raudrī rises she passes through the five states. Initially she is pure Energy. Splitting it apart she emerges out of it as Light. When she emerges out of the Void of the Cavity of Form at the base of Suṣumṇā she becomes Sound. When she reaches the palate she becomes the Point. Finally she assumes her state as pure Bliss in the Place of the Command, the Stable Place. Initially fierce when she emerged from the one Energy, she becomes peaceful in the Wheel of Tranquillity.

26. See above 36/88cd-89.

27. Ā stands for Ājñā, the Command in which the goddess is 'established' (cf. 38/16). Thus the god is in the goddess, just as the goddess is within the god.

28. Note that only thirty-one deities are listed here not thirty-two. Moreover the first entry is Śrīnatha whereas all the rest are goddesses. It seems that a line or two of the text has been lost. The figure thirty-two suggests that these deities correspond to the syllables of the goddess's Vidyā. Indeed, a good number are names of Kubjikā.

29. Varuṇa is the guardian of the western quarter. Thus Varuṇa's House is that of the Western Tradition. See below, 48/3. Also Ykh (1) (4/299d): *śrīkramaṁ vāruṇaṁ gṛham*. Quoted above in note to 30/164-166ab.

30. Cf. above 36/81cd-82ab.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-SEVEN

1. The passage from 37/2cd to the end of this chapter is repeated in all the MSs after 47/28 where, as here, it runs to the end of the chapter. In chapter 47, this passage appears after a description of the initiation and naming ceremony of the neophite. This is indeed when the Rules that the initiate should observe are normally taught to him in the most common and basic form of the Śaiva rites of initiation. But this passage is not out of place here, coming as it does just after an exposition of the Kaula rites of initiation. Note that both this chapter and chapter 47 are called 'the Practice of the Rule'. Thus it appears that the passage originally existed as an independent chapter to which additions were made to make it fit in these two places possibly by two separate redactors, the second of which failed to notice the repetition.

Some lines and verses in this passage are also found in a passage in the ṢSS (41/11-63) dealing with the same subject. These have been collated with the Sanskrit text and signalled as we go along in the notes to the translation.

2. Cf. 44/53-63ab.

3. Cf. 48/54.

4. Similarly, the *Ṭīkā* (fl. 80b) admonishes:

The Command operates for one who observes (the Rule). Without observing the Rule in this way, (the initiate has) no power (*sāmarthya*) and so, without power, (he does not experience) the plane of Stillness (*nirācāra*). Therefore without observing the Rule, the initiate falls and, degraded (*bhraṣṭa*), is destroyed.

yaḥ pālayet tasyājñā saṁpravartate | evaṁ samayapālena [k kh: + na] vinā sāmarthyaṁ na bhavati tasmāt sāmarthyena vinā nirācārapadaṁ na bhavati | tasmāt samayapālanena vinā patati [k kh: paṭhyati] dīkṣitas tathā sa [kh: saḥ] bhraṣṭo [k kh: bhraṣṭa] naṣṭaḥ |

5. The drawing and worship of the *Gurumaṇḍala* and the *Kramamaṇḍala* is taught in chapter 48. See also above 11/24b-53 where the *Kramamaṇḍala* is described.

6. Concerning how the scripture should be worshipped, see above note to 30/32.

7. KuKh 37/8cd-9ab = ṢSS 41/32cd-33ab. One should first worship the book in a secluded, solitary place and then listen to the Kula scripture along with the (oral) teaching. Once heard the meaning of the teaching of the scripture in one's own Kula or in another, one should worship one's own Kulakrama on a mirror or auspicious seat (*bhadrapīṭha*) and the excellent teacher who playfully saves from the terrible world of transmigration.

līlayā ghorasaṁsāratārakaṁ pravaraṁ gurum || ṢSS 41/32cd-34

8. KuKh 37/10cd-11ab = ṢSS 41/35cd-36ab.

9. Passages like this one in which the rules (*samaya*) to be followed are listed are commonly found in Tantras of all traditions. It is such a basic and important topic that they are included in most of the major Kubjikā sources. It would be tedious and unnecessary to quote them all, An example is the *Samayasūtra* in YKh (1) (23/1-11ab).

An extensive and systematic presentation of the rules is found in the *Ṭīkā* as part of Sixteenfold Consecration, reproduced and translated in appendix 1. As usual, the disciple is told the Rules he must observe just after he has received initiation. In that case, as here, it is just after the concluding initiation by piercing (*vedhadīkṣā*), which is the fifteenth consecration. They are called the `Group of Eight Rules' (*samayāṣṭaka*). Each of these eight general rules includes eight specific ones, thus making sixty-four altogether, which is also said above to be their number (KuKh 30/230cd-231ab). Another example of this pattern is found in the *Devyāyāmala* quoted by Abhinavagupta in the TĀ (15/521ab-531ab) which is quoted in the notes to the passage in the *Ṭīkā*.

This is is the manner in which the Rules are framed in the following passage in chapter seventeen of the ṢSS. Rules must be rigourously observed, not for their own sake or simply as acts of obedience or self-control. By observing them the aspirant develops his spiritual power, the capacity *(sāmarthya)* to rise to higher levels and ultimately attain liberation. Moreover, it is essential that Kaulas should observe the rules constantly maintaining a sense of oneness. This way they ultimately attain the non-dual state of Stillness – Nirācāra – beyond them. Thus the ṢSS begins by teaching:

One should observe Kaula Conduct (*ācāra*) and non-duality. One should keep the secret signs (*liṅga*) within that hidden in the teaching. One gets the best knowledge from the lowest thing if the one who desires to have it is excellent. One who desires the Command, whether he be twice born or (belongs to the lowest caste) who bears the sign (of an initiate) (*liṅgin*), should not cheat (his teacher or anyone else). Everything that is enjoined (as part of one’s practice) should be done in a solitary place, not in the midst of people. Otherwise, O beloved, (one’s initiated) state (*sthiti*) and teaching (with it) will be destroyed.

ṢSS 17/160-162.

One should avoid Buddhist Kaulas, Mīmāṁsakas, those who have fallen from the Vow of Knowledge and (dry) logic (*tarka*), logicians and cheats. Their fallen actions are not liberation, nor the means to achieve it. The non-duality within them is solely for their tongue and genitals. Devoid of (true) Kaula Conduct, they wander about like dogs. Devoid of (authentic) Nirācāra, they do what is devoid of right conduct (*nirācāra*). Those deluded ones eat poison and are devoid of the Command and mantra. Even though (those who are true Kaulas) know the three times and are able to attract the Triple World, they keep their conduct hidden and observe the established order of the Kula (*kulasthiti*).

The goddess said: O lord of the gods, please tell (me) what the established order of the Kula (*kulasthiti*) is. (I need to know because) the Command of the teacher does not operate without the Rule. Bhairava said: 1) One should worship (*pūjayet*), 2) one should not (do what is prohibited) (*na kārayet*), 3) (one should) keep hidden (*gopayet*) (what is sacred) and 4) eliminate (defects) (*ghātayet*). 5) One should not criticize (*na nindet*) (or) 6) speak (about what is improper) (*na vadet*). 7) One should not look (at what should not be looked at) (*na nirīkṣet*) or 8) feel revulsion (for anything) (*na jugupsayet*).

1) One should always worship (*pūjayet*) the teacher, the elders, the scripture, the favoured mantra (*iṣṭamantra*), Bhairava, liquor, the goddess and the Self.

2) One should not (*na kārayet*) disturb (others), be unpleasent, angry, speak with another person's wife, obstruct the rites, be lazy or transgress the Command.

3) One should keep hidden (*gopayet*) the rosary, the cloth (used for meditation) (*paṭa*), the skull, the union of Yoginīs and Heroes, the accomplished Vidyā, mantra and Yogamudrās.

4) O Pārvatī, one should eliminate (*ghātayet*) deviousness, deceit, backbiting, attachment and aversion, pride, and delusion.

5) One should not criticise (*na nindet*) the Rule, (Kaula) conduct, the vows, women and virgins, the substances of the Siddhas and the ways of the world (*lokaceṣṭa*).

6) One should not speak (*na vadet*) about teachers, Yoginīs, and Siddhas, the secret language of the scriptures, what is improper, what (one has) have not heard (directly) or seen or anything (personal about) oneself.

7) One should not look (*na vīkṣayet*) at the vulva of a young woman, sexual intercourse (*paśukrīḍā*), a naked woman with exposed breasts, one who is frightened, fallen (from virtue), scared or the place of the genitals.

8) One should not feel revulsion at the sight of blood, wine, fat, marrow, urine, meat, a bad smell, disease, or a leper without limbs.

O goddess, these are the eight Rules (*samayā*) that have been revealed to you today. The Command operates for one who observes the Rule. O goddess, without the Rule there is no plane of Stillness (*nirācāra*) (for him to attain). The objects of sense that cause desire wane away for him by (the practice of) stillness (*nirācāra*). By the (practice of) stillness (*nirācāra*) one who is immersed in the objects of sense becomes (a mere object of) ridicule (for him).

Having abandoned a community (*kula*) that is fallen and destroyed, take refuge in Kulakaula. There one should worship the lotus feet of yogis and teachers. O goddess, without the Rule, (the disciples) will destroy the teaching. O Kuleśvarī, having known the divine plane of the tradition (*āmnāya*), which is free of (the restrictions of) practice (*nirgatācārarūpin*) according to its (true) state, by the application of the method with six aspects (i.e the *maṇḍala*), the one who applies himself to the Yoga of Power (*sāmarthyayoga*) has conquered the senses and is beyond (their) objects. Detached and unaffected (by desire) he attains the plane of Nirācāra.

10. The ṢSS adds:

Like a servant, (the disciple) should quickly do whatever (the teacher) sends him (out to do). Even if he is highly respected (in society), devoted to spiritual practice, learned in the scriptures, or highly skilled, he should not feel shame to prostrate before the teacher. Pride, sloth, (vulgar) mirth, delusion, (senseless) elation, talking without being asked to do so, chatting freely, sitting casually, unseemly contorting the body, brushing the teeth, indiscipline, airing one's views, making a show of oneself - one should never do (these things) with a (careless, disrespectful) attitude (in front of the teacher).

11. KuKh 41/14cd-15ab = ṢSS 41/18.

12. The ṢSS adds:

The wise should venerate the sword and wheel etc, the parasole, the ornaments and vehicle and not touch them with (his) foot or ever step over them.

chatraṁ cābharaṇaṁ [k, kh: cābharaṇān] yānaṁ [k, kh: yāni] arcanīyā [k, kh: -yaṁ] manīṣibhiḥ ||

13. KuKh 37/15cd-18ab = ṢSS 41/19-21.

14. This is the reading of KuKh 37, KuKh 47 reads: the disciple with a steady mind.

15. KuKh 37/17cd-20ab = ṢSS 41/20cd-23.

16. Once the devoted disciple has served (his) teacher thus, he receives the consecration into the Kulakrama by his teacher's compassion. Thus the Command operates within the disciple in accord with the teacher's order (*ādeśapūrvikā*). Desirous of success, he should always wander freely in the world. He should take a begging bowl (with him) from which to eat and he, the Lord of Yoga, should live in an abandoned temple or in the forests or on top of a mountain or in an auspicious house.

See above 5/43 and note to 14/1-2ab.

17. KuKh 37/25ab = ṢSS 41/29ab. The Hero wanders on the face of the earth assuming many roles – in some places he is a yogi, in some a Brahmin in others a pure renounciate. (Doing so) he should give up violence (*pāruṣya*) human greed, sloth and backbiting.

The yogi has the power to assume many forms. Cf. above 11/80cd-85ab.

18. KuKh 37/29 = ṢSS 41/31cd-32ab.

19. KuKh 37/31-32ab = ṢSS 41/38cd-39ab.

20. One should not watch wrestling or cock fighting or look at a woman with bare breasts. One should not watch ejeculation, either one's own or that of another or look at a virgin's vagina.

23. KuKh 37/38ab = ṢSS 41/49cd.

24. See above 6/48-49ab.

25. One should not make the sounds `re! re!' or `he! he!' (uttered in contempt). (Or say) Lākī, Rākinī and Śākinī. (As a sign of respect) one should not utter the word `hākī' or say `Hārūpikā' and never utter `Sehārī'. One should not speak badly of a low-caste woman or man.

striyaṁ vā puruṣaṁ vāpi na nindec cāntyayonijam || ṢSS 41/52cd-53.

26. All the animals listed here are female and so cannot be sacrificed and hence cannot be eaten. The KJN (23/2-5) similarly lists a number of female animals that should not be eaten. Only two of the animals listed here are not included, namely, the sow and the gazel. The reason stated there as to why they cannot be eaten is that they are all forms that Yoginīs can assume. On the other hand, the KJN (11/14ff) also lists a series of animals that should be eaten. These are all male, many of which are the male counterparts of the female animals that should not be eaten. They incude dog, cat, camel, fox, horse, tortoise, boar, crane, crab, mongoose, buffalo, rhinocerous and all kinds of fish.

Similarly, the goddess lists male animals that are fit to be sacrificial food (*caru*) in YKh (1) (11/1-6ab). These include rabbit, rinoceros, ram, buffalo, goat, peacock, mouse, fish, tortoise, birds, deer, cat, mongoose, bull, and pig. The following types of food which are (normally) to be avoid are also good for sacrificial food (*caru*): garlic, onion, cat, lion, elephant, monkey, wild goose, owl, crow and eagle (*gāruḍa*).

The meat of a wild gander (*haṁsa*) is the gander's seed and it engenders expansion. O Bhairava, it is a product (*udbhava*) that is present in all meat and so it is holy (*pavitra*). Pleasing to all the gods in the gathering of Siddhas and Yoginīs, it is the sacrificial food (*caruka*) of the Skyfarers and so it is called `with pervasion' (*saviṣa*).

haṁsākhyaṁ [ṅ: hansākṣa] yodbhavaṁ [k, kh, gh: sodbhavaṁ] māṁsaṁ [k, kh: māsaṁ] haṁsabījaṁ [k, kh, gh: hasabījaṁ; ṅ: -vīja] vikāsakam [ṅ: -śakaṁ] ||

27. One should never argue (needlessly with others) or act in a rash, violent manner (*sāhasa*) but always do what is more pleasing (to others). One should converse with yogis at a crossroad, under a solitary tree and certainly always wander around the sacred fields, cremation grounds, forests great and small, temples and on the bank of a river.

28. Cf. 46/302 where the same statement occurs and is in context.

29. Perhaps the ‘clan wife’ (*gotrabhāryā*) is the Kaula partner. I have not come across this expression elsewhere.

30. A *vardhanī* is a broom or jar of a particular shape.

31. One should make aspertions and worship the Bengal kite (*cilla*), vulture, crows, the destitute (*dīna*), the wretched (*kṛpaṇa*), women, virgins, all living beings (*bhūta*) starting with Brahmins, along with (household impliments, such as), the pestle, the couldron (*ukha*), the threshing floor, the water jar (*vāridhānī*), the jar, the (grinding) stone, the winnowing fan, spoon (*darvikā*), broom, porch, stove, bed and the like, the garret (apartment on the roof), and (the household) weapon. Even though they are (just) household impliments, one should not touch them with the feet.

32. Concerning the use of the term *darśana* in this sense, see intro. vol. 2, p. 329 ff..

33. When speaking of the (sacred) places of Rudra, Śakti or Śiva one should prefix (their names) with '*śrī*'.

34. Cf. TĀ 15/575.

35. See 46/290 and note.

36. Concerning the Circle of the Teachers - the *Gurumaṇḍala* - see intro. vol. 2, appendix 2.

37. Does that mean above the Circle of the Teachers? This is where the Circle of Saṁvartā is to be worshipped according to the *Ṭīkā*.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-EIGHT

1. This verse is a variant of the first verse of the Root *Sūtra* with which chapters 26 and 42 begin. The rest of this version of the *sūtra* develops in its own way. For an explanation of this verse see notes to 26/3.

2. The seat Tisra is the Half Moon, which symbolizes the New Moon. This is the 'forehead' of the syllable AIṀ. Above that is the Point which symbolizes the Full Moon and is the location of the sacred seat of the Moon. Above the Point is the Wheel of the Mothers. This is the location of Koṅkaṇa. In many cases Koṅkaṇa replaces Candrapīṭha, but here it is presented independently. Although not counted as a separate seat it is accorded a special, privileged status as the embodiment of the Wheel of the Mothers. This is said to be 'above'. Elsewhere we have seen that the Circle of Mothers (*mātṛmaṇḍala*) is below Kāmarūpa (see intro. vol. 1, p. 109). Here it is 'above' which may possibly mean 'surrounding'. The three encompassing rings usually represent the lights of the Sun, the Moon and Fire.

3. Cf. 26/4.

4. The six groups of six lisited here are the six Siddhas and the six Goddess along with the Six Wheels in which they reside. There are also six trees, creepers and seals.

5. Notice here how groups of six operate together with triads. The six are projected and worshipped in the corners of the hexagram that surrounds the triangle in the centre. The corners of the triangle are the locations of the triads. As the seat of the main deities, the centre differs from what surrounds it and so does not form part of a tetrad or group of seven.

6. The Aggregate of Letters are arranged in rows along the sides of the central Triangle in the manner described in chapter seven (8-16ab). The 'sixfold process of differentiation' is represented by the surrounding hexagram.

7. The One Verse is, presumably, the Single Syllable Vidyā HSKHPHREṀ, which is also called the Twelve Verses. Six of the 'verses' are the audible letters. The other six are the six energies of Sound above it (see 9/3cd ff.). The 'three' in the middle with the two groups of six, are, I suppose, the triads that make up the sides of the Triangle that surrounds the One Verse (made of six plus six parts).

8. The goddess is Mudrā who is in the centre of the Triangle, here called the 'triple wheel'. Kulīśa is the Point in the centre, the Divine Liṅga whose threefold face is the Triangle. The goddess is also identified with the Divine Liṅga (26/5). The One Verse is the syllable of the goddess, HSKHPHREṀ. The Lord is Navātman, HSKṢMLVRYŪṀ and is the Tamarind Tree. Below (in 38/8) he is identified with the Kadamba Tree. He is within Kula and Akula with which the goddess is identified (38/9). Below we find a reference to the 'Kula of six sheaths'

which is the Hexagram and the Kula of the Heart, also called the 'sphere of Kula', which is presumably the Triangle within the Hexagram. Then we are told that Akula is in the centre of the Yoni (39/24-25). So it seems that Kula is the aggregate (which is one of the meanings of the term) of the contents of the Triangle and the Hexagram and Akula (= the 'absence of Kula') is the undifferentiated Point in the centre. Thus both the god and the goddess pervade the Point as well and as the surrounding *maṇḍala*.

9. Jālandhara is normally said to be the 'abode that has been made manifest' but that is in the right corner of the Triangle.

10. The Mother's Liṅga is the Point in the centre of the Triangle (here called the Three Cities and the Triple Path) where Uḍḍiyāna, the sacred seat of OṀ is located. Transcendental and hence 'empty' it is the Liṅga of the Sky. In accord with the logic of 'what is within is also outside', and the oneness of the container and the contained, it is identified with the Hexagram that surrounds the Triangle. The 'word' (*pāda*) is the goddess's syllable AIṀ that is prefixed before each letter. The Liṅgas are the letters, collectively called the 'troupe of yogis' in the following verse. The Triangle is the Wheel of the Mothers, that is the energies of the letters. The 'abode of the parts of the Krama' is the Hexagram into which the six parts of the transmission are projected and worshipped.

11. A *koṭara* is a cavity in a tree. The Doomsday Fire is the goddess represented by the syllable AIṀ. The Tree is Navātman. Presumably, the 'cavity of the tree' where the Fire is located is the Point at the summit of the Seed-syllable. The Lord – Nātha – of the goddess, here called Mudrā, resides there in his undifferentiated (*niṣkala*) aspect.

Mudrānātha, the consort of the goddess Mudrā is in the Emptiness of the Liṅga of the Void, that is, the Point in the centre where the goddess's energy blazes as the Doomsday Fire. The energy of the goddess unfolds as the anti-clockwise spiral of phonemic energies within the Triangle. This is the Left Hand Path that blissful and nourishing like nectar streams and flows through the Six Wheels in the corners of the Hexagram.

12. KuKh 26 reads *vakraliṅgaṁ* for *divyaliṅgaṁ* here, confirming that the Liṅga meant here is the goddess.

13. Instead of '*kharūpam*' KuKh 26 reads '*tribhinnam*' – 'divided into three', that is, all the triads.

14. Cf. 2/10.

15. According to 38/3 and 26/4 Candrapīṭha, which is regularly identified with Tisra, is located here.

16. Instead of '*sahajakulabhavaṁ*' KuKh 26 reads '*satatam anubhavam*'.

17. Klinnānātha is the consort of Nityaklinnā, the energy of the Yoni (38/10).

18. The Five *Praṇavas* are here considered to be five varieties of Vāgbhava, the syllable AIṀ which is the first of the Five *Praṇavas*.

19. Instead of '*tatrasthā*' KuKh 42 reads '*madhyasthā*' and the CMSS '*tanmadhye*'.

20. Cf. 26/4-5. The 'expansion' is the 'churning' of the Circle of the Point and the Triangle of letters (26/18cd-20) that develops into the Hexagram that enshrines the six parts of the Krama. Here that is said to consist of 'twenty-seven divisions' (cf. 38/26). However, in the explanatory *sūtra* of the first version of the Root *Sūtra* there are twenty-eight divisions (26/20-23). This suggests that these two versions of the Root *Sūtra* belong to different branches of the Kubjikā tradition – one has a Krama of twenty-seven mantras and the other of twenty-eight. All the Kramas described in chapter twenty-eight above consist of twenty-seven mantras. The three divisions of the tradition are the three lineages of the Eldest, Youth and Child. According to the interpretation of the previous version of the *sūtra* these three are a part of the Krama (26/23). Here they are in the Triangle of the City of the Moon, associated, presumably, with their corresponding sacred seats. The Island of the Moon is the Hexagram which is the Plane of the Transmission (*kramapada*).

The goddess is the Point in the centre which is the undifferentiated source of the *maṇḍala* and all it contains. As such she is Akula. She is also the entire *maṇḍala* which issues forth from her at one with her. As such she is Kula.

21. Instead of '*ṣaṭprasūtā*' CMSS reads '*bindubhūtā*' – 'who is the Point'.

22. Instead of '*siddhadivyaugarūpā*' KuKu 26, KrSūA and CMSS read: '*siddhidā bodharūpā*'

23. Instead of '*nityaklinnāsvarūpā*' KuKh 26 and 42, and AS read '*nityaklinnā suraktā*' and the CMSS '*nityaklinnā svaraktā*'.

24. Instead of '*bhagamuditaparānandaśaktiḥ prasiddhā*' the CMSS reads: '*bhavamuditasadānandadātrī svatantrā*'. She is free and infused with joy by the Yoni, she gives eternal bliss.

25. The colour – *piṅgala* – of the goddess's seed-syllable suggests her oneness with Piṅgala Bhairava, one of the many names of the First Lord and teacher (see, for example, below, 46/35). He is Navātman who resides in the centre with her (cf. 39/40-41).

26. The six rays of the Siddhas are the energies of the letters Ha Sa Kha Pha Ra EṀ of the goddess's syllable.

27. Vāgbhava – AIṀ – has five divisions. This seed-syllable of the Mother Kubjā has six divisions and so is HSKHPHREṀ.

She is Khageśī, the Command in the Triangle of the City of the Moon which is the lotus of the aggregate of seed-syllables, that is, the letters transformed into seed-syllable mantras by the addition of the nasalizing *anusvāra*. The centre is the totality of all that it emanates. In this case this oneness is expressed by the essential unity of the seed-syllable in the centre and those that emanate from it.

28. The Field is the area covered by the Triangle (7/12).

29. The Five Flowers are: 1) the Peak syllable of the Point 2) Śiva, the supreme teacher 3) the Flower of Śakti 4) the Flower of Kumārī that originates from the previous two 5) the Flower of Arousal.

30. The Tradition of the Flowers, also called the Convention of the Flowers (*puṣpasaṁketa*), is the Divine Current (*divyaugha*). This consists of eighteen teachers and their energies. Each is a Flower and is described in detail in chapter fifty-seven. Each Flower, be it one of the Eighteen Flowers or the Five Flowers, is an aspect of the Command (57/44cd-45ab) which unfolds from the Transmental down and back up to the Transmental and so is called the flow of the Transmental (57/78cd-79ab). All of this is embodied in the goddess Ciñciṇī who is the Transmental (57/94cd-95), that is, the Command (57/44cd-45ab). Her male counterpart is Liṅga Bhairava (57/49cd-50ab). She and Śrīnātha should be worshipped together as the essence of the liturgy of the Eighteen Nāthas (57/99-100ab). They are the couple (*yugma*). Here the goddess is the Image, which is the totality – Kula – of the *maṇḍala*. The god is the Liṅga, which is the Point Akula in the centre. These two verses (11 and 12) read together as a pair – *yugma* – represent this couple.

31. Here, as in other places, the Kubjikā tradition claims that it not new. Rather, it is the essential teaching of the previous Kaula traditions.

32. The Moon in this case, it seems, is the Liṅga in the centre of the *maṇḍala* in which the Fire of Śakti resides. The two Siddhas are normally represented by the the letters Ha and KṢa. Ha can be considered to be a developed form of emission (*visarga*) and so, perhaps, for this reason is called Joy. Formed by the union of Ka and Ṣa, 'Kiss' would be an appropriate name for the conjunct consonant KṢa. Normally the two Siddhas are on the left and right of the central Point.

33. The Fire of Kula in the *Liṅga* is the Doomsday Fire (*vaḍavānala*) within the Point See below 57/83cd-86ab. Cf. KMT 16/95.

34. The current of mantras – related to male beings comes from Kubjīśa whose sonic form is Navātman. In this case the seed-syllable is not just the source of the deity's root mantra. Similarly, the current of Vidyās emanates from Kubjikā in her seed-syllable form. The Fire of Kula is the goddess in the Liṅga, that is, within the body of the god who fills herself and him with the fiery bliss of their passion.

35. Tūṣṇīnātha sits immersed in transcendental Silence in the mountain Cave of the triangle of Meru (3/1). The Fire that emerges from his body is the energy of Kuṇḍalinī that courses through and issues out from it. The goddess is in her undifferentiated – *niṣkalā* – aspect just as the Fire of Kula is in the Liṅga, that

is, within the body of Tūṣṇīśa. When she emerges out of it, she is in her differentiated aspect – *sakalā* – repleat with her energies.

36. Karavīra is the cremation ground in the seat of Oḍḍiyāna which it represents here.

37. The root of Ā is Ājñā – the Command. Cf. above, 36/98cd-99.

38. The mountain is the Triangle Meru. It is the Body of the Mothers, repleat with the letters. This form of Meru is especially full of the letters. Apart from the set of fifty letters that fills it, there are four more sets of fifty in the four sacred seats represented by their deities. Thus there are fifty Rudras in Oḍḍiyāna. Fifty Heroes in Pūrṇagiri, Fifty Bhairavas in Jālandhara and Fifty Siddhas in Kāmarūpa. Their names are recorded above in chapter six. See following notes for details.

39. These Rudras are the ones who preside over the letters of the Assembly of Sounds. They are listed in 6/14-20. See note to 6/11cd-12.

40. Pūrṇagiri is the seat in the south. The Heroes who reside there are listed in 6/100-105 where they are called Bhairavas.

41. The Body of the Mothers is the Triangle full of letters.

42. The sacred seat on the left is Jālandhara. The Bhairavas who reside there are listed above in 6/49cd-55ab where they are called Heroes.

43. The word *aṅganā* literally means `woman'

44. The fifty Rasa Siddhas who reside in Kāmarūpa are listed in 6/139-144ab.

45. The Kadamba bud at the end of the Tree is the Point and its energies at the top of the seed-syllable. The path of the left is that of the anti-clockwise movement of the goddess. Mudrānātha above (38/7) is also said to be merged in the Path of the Left.

46. The Island of the Moon is the Point in the centre of the triangular *maṇḍala* of the City of the Moon. The Point is the Full Moon, the goddess full of all her energies.

47. This is the transcendental Emptiness at the End of the Twelve (see below 40/85cd-86) represented by the Void of the Triangle that encompasses the Point of the Full Moon.

48. The Clan is the aggregate of letters. See intro. vol. 2 p. 392 ff..

49. The pre-eminent residence or ‘hermitage’ of the goddess is the Point (*bindu*) in the centre of the *maṇḍala* at the End of the Twelve. It is the Liṅga (see above, 4/24).

50. The wheel in the centre is the Point at the summit of the seed-syllable within the Stone, that is, the Triangle.

51. The churning of the Sun and Moon is the union of Śiva and Śakti. This generates the seed-syllable in the centre the Kadamba Tree that grows out of the ‘root of the root’, that is, the source of Point which is the root of the Tree.

52. Cf. above 38/9 and note also below, 39/46.

53. The sacred seat of Yoga is the *Saṁvartāmaṇḍala* in the End of the Twelve. See note above to 7/46-47ab with reference to ṢSS 28/15cd-16ab. It may also be just the triangular core of the *maṇḍala* (see notes to 2/18). See below 46/1 ff. for a description of the distribution of the twenty-five principles in the *Yogapīṭha*.

54. The goddess is depicted churning honey also in the following verse of the *Khecarasūtra*:

Completely full, she has entered into the Full. She is called Śivā who is the energy of the Sun, Kha Pha Ra within the principle of the Point. The mother of the triple world and the millions of mantras, she shines with the rays of Fire, Moon and Sun. She shouts with anger, she who is the energy that churns the (ocean of) honey (*madhu*) and arouses (*kṣobhayantī*) the *maṇḍala*. She is the primordial (power) (*ādyā)* in the centre of the Egg of Brahmā. Bhairava and the Command of the Skyfarer bow (*praṇamata*) (to her) in ecstasy (*sahasā*).

YKh (1) 34/3

55. The Knot of Brahmā is located between the Wheel of the Self-supported and the the Wheel Full of Gems. It is Vakrikā in the form of the lower, downward facing triangle (see 7/39cd-40ab). The energy of the Command first travels down to the Knot of Brahmā where she rests as the lower, sleeping Kuṇḍalinī who, in a potential, unmanifest state, is 'concealed' there until she awakens and is 'born' again. Then she rises, penetrating through the Wheels in the body and exits through the Cavity of Brahmā.

Beyond the Cavity of Brahmā she enters the Void of the Triangle in the end of the Twelve. There 'she wanders on the Path of the Void by means of the Three Paths'. The Three Paths are the three sides of the Triangle. In the body they are Iḍā, Piṅgalā and Suṣumṇā – the main channels through which the vital breath moves. They correspond to the energies of Jyeṣṭhā Vāmā and Raudrī who are the hypostheses of the triple energy of will, knowledge and action that operate in consonance in the Triangle of the Void (see 7/13 ff.; 14/61-62ab and also 40/132-133) as three aspects of the Transmental. This is the energy of the Yoni, which in the Root *Sūtra* is accordingly said to be 'conjoined to the dynamism of the Three Paths' (*tripathagatiyutā*) (26/3a). So we read in the CMSS (quoted in comm. on TĀ 3/94cd-95ab):

> The Triangle is said to be the Yoni (*bhaga*). It is the secret Circle in the Sky. (Its) corners are will, knowledge and action. In the centre of it is the Transmission of the (goddess) Ciñcinī.

56. When the breaths move, transported by Kuṇḍalinī the vital force that animates them, she sleeps, coiled in the circular motion of the breath. But when the movement is fixed in the centre at ‘midnight’, she awakens and moves in the night when there is neither Sun nor Moon, wandering through the sacred sites of the Wheels up and out into the upper Triangle.

NOTES OF THE TRANSLATION OF CHAPTER THIRTY-NINE

1. The texts regularly refer to the core of the *maṇḍala* as a triangle (*trikoṇa*), which is how it is drawn in two dimensions. However, it would be more accurate to think of it as a pyramid with a triangular base This is how we should understand the Stone to be. The Peak of the Stone is the apex of the pyramid which, drawn in two dimensions, is represented by a point in the centre of a triangle.

2a. Kulākula is the union of Śiva and Śakti (39/42). It is represented by the straight horizontal line at the top of the downward facing Triangle. Beyond it is the transcendental Candrikā Kula. Candrikā is the New Moon from which the sixteen energies of the Moon are emitted (see above 3/44). It is above the Triangle in the transcendent, which is the plane of the Skyfarer into which transcendental Śiva merges (39/43).

3. In MS Jh we find the variant *ṣaṭkoṇa* - 'six corners' for *ṣaṭkośa* - 'six sheaths'. The six 'sheaths' are the corners of the hexagram into which the Six Wheels are projected. Collectively this is called Kaula because it is derived from Kula, the triangle in the centre. One of the reasons the teachings of the Kubjikā Tantras are called 'Kulakaula' is because they are extensively concerned with these figures and their contents.

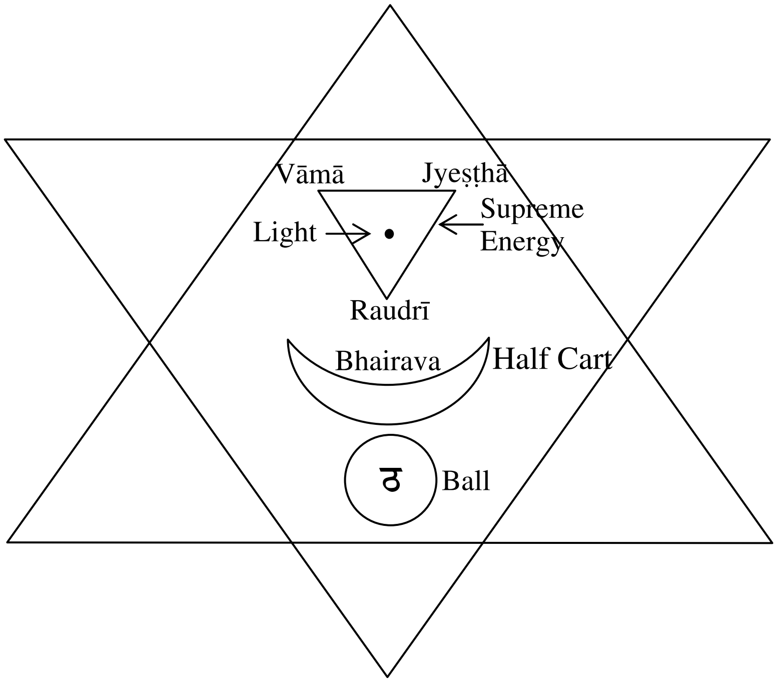
The Six Wheels are, as in the previous verse, commonly called the 'six parts'. They originate from the corners of the hexagram, the Kula of six sheaths. In the centre of the hexagram, the sphere of Kula, is the triangle, the Kula of the Heart.

4. Cf. 38/14-15ab.

5. The form of the letter Ṭha is a small circle. This is the 'ball' i.e. the Point which boundless, encompasses Emptiness full of all the energies. See below, 39/83cd-84 also 39/147.

6. The lunar asterism Rohinī is called Śakaṭāhvā – the Cart. The Cart is the 'Cavity', that is, the Void of the Triangle surrounded by the three qualities of Nature that issue from it represented by the corners of the Triangle (39/35cd-36). The Half Cart is Bhairava, the Lord of Light (39/29cd-30ab), the male counterpart represented by the crescent Moon above the Point in the centre.

Diagram 6. The Cart and the Half Cart of Bhairava



7. The Supreme Energy is the threefold Yoni. It is on Bhairava's head, immersed in his Light. This is another representation of self-perpetuation. The Point is in the centre of Yoni. This generates the Half Moon which generates the Yoni in the centre of which is the Point and so on *ad infinitum*. Thus Bhairava (the Half Moon) arises within the Yoni and the Yoni arises within Bhairava's light.

8. Raudrī emerges from Vāmā and Jyeṣṭhā and yet she is all three. The centre contains the polarities, even as it emerges from them and generates them. The centre cannot be a centre without something to the right and the left. 'Right' and 'left' could not exist without the centre in relation to which they are to the right and to the left. Thus the Yoni generated through the self-perpetuating dynamism of the vertical process regenerates itself perpetually within it through the horizontal process. This is the dynamism of reality at its highest 'extreme limit'. The Yoni immersed in the Light of Bhairava is pervaded and encompassed by him, even as the Yoni envelops and pervades Bhairava who is in the very core of the Yoni.

9. There are two kinds of Māyā. One that is binding which is 'stained' with ignorance and impurity. The other that is liberating and stainless.

10. The term *mekhalā*., which literally means 'girdle', normally denotes a circular enclosure that demarcates the periphery around the *maṇḍala*. There may be more than one. In this case, it denotes the hexagram around the central triangle of the *maṇḍala*. Doubled, this forms two triangles, one facing up and the other down. Thus, the Triangle is both the container and the contained.

11. This also a name of the constellation Bharaṇī. Concerning this etymology of the name Bhairava, see chapter one, note 85 and cf. 13/77cd-78.

12. After describing the surrounding Yoni, the Tantra goes on to talk about the Centre. This is where Bhairava resides within his energy, the power of bliss (1/1), just as she resides within him. He is bliss and she is the power of his bliss that makes him blissful. He is the body of bliss described in this case as the Krama. She is the energy, the vital force of his body – the command.

13. Concerning the Bliss of Stillness, see intro. vol. 1, p. 101 ff..

14. This god is Piṅgala Bhairava (39/41). One Kula is that of the manifest goddess who displays her qualities in the three seats in the corners of the female Triangle where they are in the balanced unmanifest (*avyakta*) state that precedes emanation. The other Kula is Bhairava, her consort in the centre. He is the manifest aspect the entire Body of Navātman that contains in potential form all the energies of the letters and their outer counterparts right down to the gross elements. Both are Void. United one with the other, they are Emptiness within Emptiness.

15. The Triangle is the transcendental counterpart of the body, The centre of the Triangle is the navel, which is the centre of the body. The yogi who experiences this is liberated.

16. Bhairava is Navātman the syllable HSKṢMLVRYŪṀ. Beyond the play of his differentiated energies he is transcendent (*niṣkala*). He is also immanent (*sakala*), as the one who possesses them. Parā is Vāgbhava, the syllable AIṀ. The two syllables are written together in the centre of the *maṇḍala* to represent the union of the god and the goddess. By worshipping Bhairava, one attains union with the goddess.

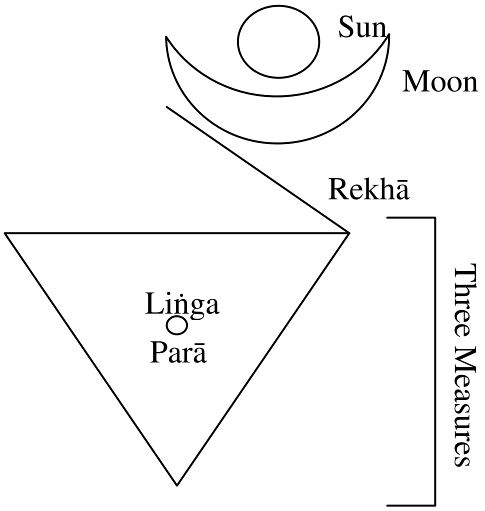
17. Cf. 39/37.

18. The Sun is Śiva and the Moon is Śakti. The bliss of the two is the union of Śakti within Śiva. The 'line' that develops from this union is Jyeṣṭhā (40/21cd-2ab). She is the energy of the horizontal line at the top of the downward facing Triangle that represents Kulākula (39/21). At the summit of immanence where Śiva and Śakti unite, she is at the same time in the very core of the centre. Thus she is both a 'line' and also a 'point' without dimension. She unites in herself in this way the seeming paradox of the union of opposites.

19. Just as the Moon of Śakti merges into Śiva, so Śiva merges into Śakti in the Moonlight of her transcendental energy above the Triangle (see above 39/21 and note). Thus the transcendental plane of the Skyfarer is experienced directly by the yogi whose consciousness participates in this process.

20. The Wheel (*cakra*) is the Triangle formed within the union – Yoga – of Śiva and Śakti that takes place in this way. Thus the transcendental Emptiness of this union spontaneously forms itself into the immanent Emptiness divided, as it were, into three measures of the Triangle, from which will issue emanation. This begins with the generation of the Krama, a process called the 'arising of the Yoni' (*bhagodaya*) (39/46). It then spreads out through to form the rest of the *maṇḍala* beginning with the Eight Mothers and then the Sixty-four Yoginīs that issue from them as their 'divisions' (39/53-55ab).

Diagram 7. The Wheel of Three Measures



21. The Yoga of the Mothers is the union that takes place with the Body (*piṇḍa*) of Navātman and the energies of the letters in the triangle. (cf. above 39/37).

22. The Yoni – represented by the letter E – is the source. The letter Ī is the will – represented by the letter I – when it issues out of transcendental Emptiness to assumes the form of the flow of emanation as it intensifies further. Thus below we are told that: Generation (*udbhava*), filled with bliss, is the letter Ī tripled (59/5).

23. See above, 38/9 and note.

24. The 'girdle' that surrounds the Triangle is the Hexagram. See above, note to 39/29cd-30ab.

25.

8. Table of the Triple Kulakrama

Seat	Location	God	Colour	Function
Kāmarūpa	In front	Kāmadeva	White	Emanation
Pūrṇagiri	Left	Viṣṇu	Yellow	Persistence
Jālandhara	Right	Rudra	Red	Destruction

26. Beyond the hexagram is the lotus of eight petals in which the Eight Mothers reside. These are divided into eight each to become the sixty-four Yoginīs that surround them in groups of eight. This part of the *maṇḍala*, like the

rest, is also generated by the union of Śiva and Śakti in the centre. The same union takes place throughout the *maṇḍala* in all its parts and between all the beings and entities that reside in it. But the main union and the polarities of this union are always Śiva and Śakti. In this case, presumably, they are represented by the two juxtaposed triangles of the hexagram. Although this is the immediate source of the emanation of the Mothers that follows, it is nonetheless the same union of Śiva and Śakti that takes place in the centre.

27. The letter A is the first letter of the alphabet and as such the beginning and source of the series of letters. Containing all the energies of the letters it generates, the letter A is the ocean of letters through which all the universe of denotable entities is produced. The eight abodes are the eight classes of letters, each governed by a Mother.

28. See intro. vol. 3, p. 63.

29. See above, note to 4/8.

30. Drawing from the TS, the KMT (6/50 ff.) expounds three principle Gestures considered to be aspects of the Gesture of the Skyfaring Goddess (*khecarīmudrā*). These are Triśikhāmudrā, Padmamudrā and Yonimudrā. Padminī, the name of the goddess of the Gesture of the Cave, suggests that it may be Padmamudrā. If so, perhaps the Gesture of the Monastery is Triśikhāmudrā.

31. For a table of some of these triads see above, note to 20/31-32.

32. These Five Jewels are the Five *Praṇavas*, the seed-syllables of Brahmā, Viṣṇu, Rudra, Maheśvara and Sadāśiva. As the Five *Praṇavas* are closely associated with a set of five mantras called the Five Jewels they are sometimes called by the same name (see 62/3cd-4ab). The Five Jewels are mantras dedicated to the Yoginīs who live in the five worlds (*loka*) of the universe. Thus they can be considered to be the modalitity in which the Five *Praṇavas* are 'established in the universe'. The Five Jewels are discussed in 44/32 ff. and chapter 62 which is dedicated to them.

33. The text here is corrupt. The MSs read *vasantākṛtiṁ saṁyojya* which I have translated as it stands although, admittedly, it makes no sense.

34. Below (39/65) we are told that the Monastery contains the divisions called Ānanda and the rest. The arrangement in the hexagram is described further ahead (39/68-71ab). Thus it is clear that the Monastery is the hexagram.

35. The Verses is the mantra called Twelve Verses (*dvādaśaśloka*). It surrounds the Triangle in the centre of the *maṇḍala* (see above 3/30ff.). It is also one of the names of the seed-syllable HSKHPHREṀ. As the latter is considered to be the essence of the former, both may well be meant here. At any rate the recitation of the Verses and knowledge of the *maṇḍala* is extolled below as equally essential (39/71ab).

36. See above 39/25 and below, 39/83cd-84.

37. Ānanda and the rest are the six lineages of teachers established by Matsyendranātha's six disciples. They are projected into the Six Wheels set in the corners of the hexagram (see 39/68-71ab and notes)

38. The Great Place is the abode of the deity where the teacher's consciousness resides. `Śrīdeva' who is the deity manifest in the world as the first teacher has 'arisen in the Great Place' (*mahāsthāne samudbhūtaṁ*) (YKh (1) 4/3c) The Transmission of the Teachers bestows freedom from emanation and withdrawal by awakening it (*mahāsthānaprabodhena sṛṣṭisaṁhāramuktidam* || ibid. 4/1cd). It is the goal of every disciple to reach that Great Place and be united there with the inner Self of the teacher which is at once the disciple's true Self and deity. He rises through the measures of Sound. YKh (1) teaches:

There is (the energy which is) one measure (*ekamātrā*), two measures (*dvimātrā*) and three measures (*trimātrā*). The (energy which is the) half measure is supreme and subtle. Above it is (the one reality which is both) supreme (transcendent) and inferior (immanent). It is the teacher's place, the Great Place. The Self that is endowed with the consciousness of its own consciousness has come from that Place. The pure (beings) who are on their way to the Supreme should also be conjoined into that plane, initiated by Śrīnātha.

ekamātrā dvimātrā ca trimātrā ca tathaiva ca |
ardhamātrā parā sūkṣmā tasyordhve tu parāparam ||
gurusthānaṁ mahāsthānaṁ tasmāt [k, kh, gh: tasmā] sthānād vinirgatam [k, kh: vinirgabhaṁ] |

Each of the Eight Mothers reside in a 'great place'. Collectively they are the one Great Place divided into the sacred seats and sites from which the teachings originate. Each of them, as our text says, arise from bliss and, as the following passage from YKh (1) says, are also immersed in it:

I will tell you about the group of eight great places which according to their Kula variety are threefold and within which the sacred fields and seats are established on the seat of oneness. All of them are associated with the varieties of sacred seats in accord with the sequence of sacred fields and (immersed) in the Bliss of Stillness, they are pure and, outwardly established, bear the form of Kula.

YKh (1) 3/12-13.

39. Concerning these lineages founded by the six homonymous disciples of Matsyendranātha, see intro. vol. 2, 317.

40. The Six Wheels (*ṣaṭcakra*) in the body are commonly projected into the corners of the hexagram. The are naturally associated with the beings who reside in them. Below they are linked to a set of Yoginīs. Here they are associated with the six lineages of the earlier Kaula tradition (*pūrvāmnāya*) founded by Matsyendranātha. Elsewhere, we have seen how they are projected into the Wheels in the body. Here we learn how they are projected into the same Wheels set in the hexagram. The correspondences are summerized in the following table.

9. The Six Lineages and the Wheels in the Corners of the Hexagram

Wheel	Location	Number of Spokes	Lineage
Pure One	Throat	Sixteen	ṇnanda
Unstruck Sound	Heart	Twelve	ṇvali
City of Gems	Navel	Ten	Prabhu
Self-supported	Below navel	Six	Yogin
Foundation	Genital region	Four	Atīta
Command	Between eyebrows	Two	Pāda

41. This Krama in twenty-seven parts is especially favoured by YKh (1), indeed it deals only with this one. The KuKh largely follows suit. Above we have seen that it is this Krama that is projected into the hexagram (39/47-48ab). A full three chapters (29 to 31) of YKh (1) are dedicated to it that are reproduced below as chapters 59 to 64. We notice that the goddess says she has explained this Krama before. Could that be in YKh (1)?

42. See above note to 6/190cd-191ab. The Transmission of the Skyfarers corresponds to the Divine Current (*divyaugha*) described in detail below in chapter 57 (see note to 3/11). That is divided into units of four, five, six and three (see above 2/20-21ab and note) making eighteen as we find here except that each group in the sequence is squared as in the following one.

43. The six parts, as we have seen, are the Six Wheels in the body each of which corresponds to one of the early Kula lineages founded by Matsyendranātha. As Kuṇḍalinī rises through the Wheels the adept progressively acquires the authority of each lineage which governs the corresponding element and constituent of the body (*dhātu*).

44. The Cave is the Void within the Point in the centre. Cf. note to 39/25.

45. This verse also appears above as 30/48cd-49ab. See notes there and the passage that follows for an explanation.

46. This verse also appears above as 30/54.

47. Concerning the hexagram of the two door panels, see above 30/48cd-9ab and note. See also 30/55.

48. This is another six groups of mantras that can be projected into the corners of the hexagram. These groups like the others mentioned here must, indeed, be learnt from a teacher.

49. Concerning the Twelve Verses, see KuKh chapter 1, note 44.

50. See above, note to 39/63.

51. See below 44/32-3.

52. YKh (1) adds: And O fair one! the (convention regarding the) *maṇḍala* and those that go by the name of the Rule and the Gestures.
maṇḍalaṁ ca varāroha samayā caiva [g: samayamudrāś ca] saṁjñayā |

53. Instead of the end of this sentence and the following YKh (1) reads: And O god, he who knows the division of the icons, he is a (true) teacher.
mūrtibhedam tathā deva yo jānāti sa [g: yo na jānāti] deśikaḥ |

54. These lines are drawn from the *Sūtra* of the Nine Conventions found in YKh (1). The contents of the Nine Conventions listed there can be tabulated as follows:

10. Table of the Nine Conventions

Conventions	Child	Middle	Eldest
Mudrā	Bhaga	Padma	Kārālā
Pīṭha	Kāmākhya	Pūrṇagiri	Oṁkāra
Sthāna	Hṛdyanta	Raudryanta	Varga

YKh (1) 51/6cd-16ab

55. The text here is too corrupt to permit correction. Moreover, the following passage begins abruptly and has no context due to a loss of a part of the text.

56. Cf. above 13/69.

57. Chapter sixty supplies a cryptic explanation of this set of six groups of six (see 60/99-100ab) were they are presented as the 'group of six' of the Krama of Twenty-seven parts. Cf. below 39/162 ff. for another set of six groups of six (*ṣaṭprakāra*).

58. The groupings here are 4-4-5-5-4-4 which makes 26.

59. The fifth seat is Tisra. See 6/164-165ab.

60. See 1/2b. The couple in Tisrapīṭha is Kubjikā (= Tisrāmbā or Tisrāvvā) and Mātaṅgīśa. See 6/179cd-180ab.

61. This lineage comes from Kāmarūpa. Tisra, the sacred seat of the future that will manifest at the end of the Kali Age, is said to be in the region (*maṇḍala*) of Kāmarūpa. Five out of these nine (Yoga, Pāda, Atīta, Āvalī and Ānanda) are amongst the six lineages founded by the six disciples of Matsyendranātha. They are said to be Nine Kulas here. Perhaps these Kulas are related in some way to another set of five Kulas, also said to have originated at the end of the Kali Age noted below in 45/8-10.

62. Verses 39/138-141 are approximate repeats of verses 25/50cd-54; see notes there. 25/53 reads *candra-* instead of *caṇḍa-*.

63. 25/53 reads *vīra-* instead of *ghora-*.

64. A twelvefold deposition of Ṣoḍhā is described in chapter 22.

65. Cf. above, 22/2

66. The sacred seat of Ṣoḍhā is said above (22/2) to also be called Ṣoḍhā. This is probably Ṣoḍhī.

67. See above 39/25 and note.

68. *Pārameśvara* is one of the names of the MBT. See intro. vol 3, p. 77.

69. These Nine Conventions are very similar to those listed above in 39/113-115ab.

70. The common set of six Yoginīs that make up the Hexad of Restraint (*nigrahaṣaṭka*) is listed on the left. To the right are the Yoginīs listed here. It appears that two Yoginīs are missing in this list.

1) Ḍakinī – Ḍakā + Raktodarā,
2) Rākinī – Rakā + Karālā and Lambodarā,
3) Lākinī – Lakā + Kumbhā and Bhagodarā
4) Kākinī – Kakā + Kṛśodarā;
5) Śākinī – Śakā + Yakṣodarā and Ghorā,
6) Hākinī – Hakā + Rakṣodarā and Kulā

Concerning the Hexad of Restraint and its varieties see chapter 63 which is dedicated to it.

71. KuKh 39/168-173ab approximates to KuKh 45/64cd-69.

72. 45/65cd-66ab: One who is not part of a Kula lineage has no authority in the Śaiva Āgamas. O god, those who are initiated by (such a one) are not liberated.

NOTES OF THE SANSKRIT TEXT OF CHAPTER FORTY

NOTES OF THE TRANSLATION OF CHAPTER FORTY

1. This chapter roughly corresponds to TS 1/11-321 and AS 20/190ab with which it has been collated. We are fortunate that MSs of the *Tantrasadbhāva* survive (see bibliography). In the transition from the source, the text has been subjected to alteration by the redactor first and then to further corruptions by scribes. Lacunae and additions add to the difficulty of understanding this chapter and the one that follows, which is drawn from the second half of the first chapter of the TS. Accordingly, to aid our understanding of these chapters, the corresponding text of the TS, when it differs significantly, and the omissions from it have been translated in the notes as we go along.

Verses in the TS, omitted here, complete the context. Lines and words that coincide with the text of the KuKh are in bold face:

O Rudra, I have heard the Veda, the secret as it truly is concerning what is kept concealed. **O lord of the gods, the paths of the left and the right and the many Yāmalas, the Siddhāntas, in (their) ten and eighteen divisions** with the part (of the scriptures) consisting of thousands of billions (of verses) and the thousands of millions of many kinds. Two *sūtras* have come forth in the great *sūtra*, that is, the root Tantra, the *Siddhayogeśvarītantra* that extends for a hundred million (*śatakoṭi*) (verses). I have learnt one of these Tantras that has come forth from the Ocean of the Yoni (but) I have not heard, and wish to hear, the most excellent *Tantrasadbhāva.* The practice (*caryā*) of Tantra, ritual (*kriyā*), knowledge and Yoga are of many kinds.

2. TS: O Lord, (the state) without seed is separate from (both) meditative concentration (*dhāraṇā*) and (the state) with seed because many means are applied to the worship of the Self.

sabījadhāraṇābhyāṁ tu [k: -tuṁ; kh, g: -nyāstu] nirbījaṁ tu pṛthak [kh: missing] prabho [kh: suvrate] ||

3. TS: **Established in the Sound (*nāda*),** established in **the Drop** and established in motion (*cāra*), present in the group of six Paths. O god, (it is) present in the upward utterance of energy (*śaktyuccara*) and in Time (realised by) the abandoning of the causes. Another is the one present in emptiness (*śūnyabhāva*), the one present in Energy **and established within the Heart.**

*nādasthaṁ bindusaṁsthaṁ (kh: bindusaṁ *) ca cārasthaṁ cādhvaṣaṭkagam* ||
śaktyuccāragataṁ deva kāraṇatyāgakālagam (g: kāraṇanyā-) |

dvādaśāntasthitaṁ caiva (kh: ?) adhvasthaṁ (kh: ?) adhvavarjitam (kh: ?) |
ibid. 1/16cd-18ab

Established in emission (*visarga*) and between the eyebrows, arranged within the channel of Brahmā. The supreme god Beyond the Fourth and, again, **within the Door of Brahmā. Established in the act of generation (*udbhava*). O bearer of the trident, Yoga is established in disjunction *(viśleṣa*).**

visargasthaṁ bhruvantasthaṁ brahmanāḍyāṁ [k, kh, g: -nāḍyā] vyavasthitam ||

udbhavasthaṁ tathā yogaṁ viśleṣasthaṁ ca śūline || ibid. 1/18cd-19

Established in merger (*laya*), beyond merger – this is what I want to know. O Lord, all of your (states) have again assumed a single being. Tell me how they are all in a state of dynamic union (*lolībhūta*). O Lord of the gods, (tell me about) the vitality (*vīrya*) of mantras **that is the cause of success (*siddhi*).**

Notice that in the original version there is no reference to the Yoni. The TS, of course, knows the Yoni, as does every Śākta oriented Tantra. There it is a form Mālinī assumes. However it is not the primary form of the goddess, as it is in the Kubjikā Tantras.

The TS continues with what is here 40/46-49ab:

> Śakti is not devoid of Śiva and Śiva is not devoid of Śakti. Like wind and the sky (one never) sees (any) separation (between them). Śiva's creation exists because of Śakti who is the instrument (of Śiva's work). He has no other cause here by virtue of which he makes (his) creation. Śiva is said to be mantra and the letters of that (mantra) are (its) denotators (*vācaka*). (He is) understood to be Śiva by virtue of the union of the denotator and the object of denotation. (So) O god, having abandoned Maheśvara, where has Śakti gone that mantras, whose radiant power is without limit, have become fruitless?

The principle channels of a persons's (body) are three, namely: Suṣumṇā, Piṅgalā and Iḍā. Thus, the vital breath (*samīraṇā*) travels up and down conjoined with the individual soul. There is a knot below the channels (of the breath) that looks like (and is the size) of a dog's testicle. The flame that shines above it is small, (just the size) of the little finger. It is gross (and so clearly visible) and is located between the breasts. There is a lotus above it which is red and blue and has eight petals.

(Subtle as) the hundredth part of the tip of a hair, the form of an atom, it is very pure. It shines by (its) radiant energy (brilliant as a) lightning flash and moves like the solar orb. Yogis worship that, the Supreme Self, within the body. It is said to be the Point, which pervading (all things is) well established. The (Point) that is not pervasive is in the fettered state (*paśubhāva*) and transmigrates in the world of transmigration. He is the Māyā Self (obscured by) beginningless impurity. Free (from that he is) Sadāśiva.

He emanates many kinds of fetters, qualities (of things that both) exist (phenomenally) and do not. Those qualities, taken up from below, are established as the fettered condition. Thus in the (midst of ultimately) non-existing things, the Point is in the Yoni within one's own nature (*svarūpaka*).

See 40/56. The Supreme Drop is a symbol of the deity who escapes all spatial definition and confinment. A dimensionless point, diety is in all places because, occupying no space, it is in no particular place. Thus, deity, beyond all stages and degrees, contains within itself the union of universal immanence and transcendence, as does the drop of mixed sexual fluids, the male and female seed.

10. See above, 33/50-51 and below, 40/56.

12. KuKh 40/18 = TS 1/54cd-55ab

The Lord is the individual soul who resides in the Heart. The Upaniṣads describe him as a flame the size of a thumb that burns without smoke. Here he is compared to a spark from a fire. The four energies are Ambikā, Vāmā, Jyeṣṭhā and Raudrī. The way the last three of these energies develop is described in the following verses.

13. AS and TS: 'whose form is crooked' (*kuṭilākṛtiḥ*). Cf above chapter four, notes to *Mālinīstava* line 3 and 4. Māyā is like a spiral sack that confines the potency of the divine breath, which in that condition assumes the spiral form of the Māyā that confines it.

14. The individual soul is led up by the right-hand path and led down by the left. Going up it develops by the illumining power of Kuṇḍalinī that impells it upwards (40/78cd-9ab). Pushed down by the same power it devolves and is bound. The 'left' is the direction of emanation. Kuṇḍalī moves down and generates plurality when she is 'turned' in this direction. When Kuṇḍalī's true

nature is unknown, she is Māyā, the deluding power of ignorance. But when her true nature is known the yogi goes beyond the confines of the mind and realises that she is knowledge, not ignorance (40/78cd-9ab and 40/83cd-4ab).

15. TS: '(Jyeṣṭhā) impells (*pravartinī*) along the path of emanation’

16. The TS (1/59cd) says ‘she is said to be the third’ and adds: 'The fourth one is Nirodhī and her form is that of the moon with its digits (*śaśāṅkasakalākārā nirodhī sā caturthikā).*

These verses describe the development of the Triangle of the goddess. The same energies operate in the formation of the innermost triangle of Śrīcakra.

17. KuKh 40/24 is missing in both the AS and TS. See note to 3/122cd-123ab. Cf. The *Gorakṣaśataka*:

Just as a ball that has been thrown (*ākṣipta*) and is struck by a long arm flies upwards, in the same way the individual soul struck (in turn) by the exhaled and inhaled breath does not rest (and is distracted) (*samākṣipta*). (38)

The individual soul controlled by the exhaled and inhaled breath moves up and down by the left (*iḍā*) and the right (*piṅgalā*) path and due to (its) distracted state (*cañcalatva*) is not perceived. (39)

Like a hawk tied to a rope that has (flown) away is drawn back again, in the same way the individual soul, bound by the qualities (*guṇa*) is dragged about by the inhaled and exhaled breath. (40)

The inhaled breath (*apāna*) pulls the exhaled breath (*prāna*) and the exhaled breath pulls the inhaled breath. These two are located above and below. The knower of Yoga unites (the two). (41)

With the sound HA (the individual soul in the form of the exhaled breath) goes outside and with the sound SA it enters again. The individual soul repeates the mantra HAṀSA HAṀSA constantly.(42)

The individual soul repeates this mantra constantly twenty-one thousand six hundred times in a day and a night. (43)

The Gāyatrī called *ajapā* gives yogis liberation. By the mere intention (*saṁkalpamātreṇa*) (to recite) this one is freed from all sins. (44)

18. The TS reads this sentence: The will generates the intellect that formulates intention.

icchā (k, kh, g: icchām) utpādayed buddhiṁ saṁkalpaṁ (kh: saṅkulyaṁ) yā prakurvati | TS 1/61ab

19. TS: **The power of knowledge and knowledge** (itself) is then of eight kinds. (There is) Dharma, knowledge, detachment, and mastery, as the fourth. (There is) also Adharma, ignorance, lack of detachment and absence of mastery.

20. TS: 'everything'.

21. The *Gorakṣaśataka* (34-37) concisely defines the locations and functions of the five major and five minor forms of the vital breath as follows:

> *Prāṇa* always resides in the heart (i.e. chest) and *apāna* in the region of the rectum. *Samāna* is in the region of the navel and *udāna* in the middle of the throat. *Vyāna* pervades the body. The five winds beginning with *prāṇa* are here said to be the chief (ones). The (other) five winds are *Nāga* and the rest. *Nāga* is said to be the wind (that functions) in eructation. *Kūrma* (functions) in winking. One should know that *Kṛkara* causes sneezing and *Devadatta* yawning. *Dhanañjaya*, pervading the whole (body), does not quit it even when dead. These (vital breaths) are the living being (*jīva*) and wander through all the channels (*nāḍī*).

22. See above note to 29/35-37ab for a reference from the ṢSS (47/136cd-151) in which the eighteen eyes of the goddess's six faces are related to the vital breaths and *nāḍī*s.

23. These lines are standard ones that conveniently list the main forms of the vital breath and the channels together. Lines 40/31cd-32ab are found, for example, in the earlier SvT (7/17) and the later GŚ (33). The three lines 40/32cd-34ab correspond to SvT 7/15-16ab and GŚ 27-28ab. Both these sources supply further interesting details. The GŚ (29-31) explains:

> Iḍā (is) situated on the left side, Piṅgalā on the right and Suṣumṇā in the middle. Gāndhārī is in the left eye. Hastijihvā is in the right (eye) and Puṣā is in the right ear. Yaśasvinī is in the left ear and likewise Alambuṣā is in the mouth. Again, Kuhu is in the region of the genitals and Śaṅkhinī is in the location of the root (*mūla*). Thus the ten channels abide (in the body) (each) linked (to one of its) apertures (*dvāra*).

Woodroffe (1997: 113-114) referring to the *Saṅgītaratnākara* (1/151-163ab) identifies the main channels in the body as follows:

1) Kuhū: pubic nerve of the sacral plexus to the left of the spinal chord.
2) Gāndhārī: to the back of the left sympathetic chain. It stretches from below the corner of the left eye to the left leg.
3) Hastijihvā: to the front of the left sympathetic chord, from below the corner of the left eye to the great toe of the left foot.
4) Sarasvatī: to the right of Suṣumṇā stretching up to the tongue.

5) Pūṣā: to the back of the right sympathetic chain from below the corner of the right eye to the abdomen.
6) Payasvinī: between Pūṣā and Sarasvatī, auricular branch of the cervical plexus on the left.
7) Śaṅkinī: between Gāndharī and Sarasvatī.
8) Yaśasvinī: right thumb to left leg.
9) Vāruṇā: between Kuhū and Hastijihvā
10) Viśvodarā.
11) Alambuṣā: from sacral vertebrae to urogenital region.

Woodroffe's source lists eleven major channels. However we generally find that there are are ten. Our text lists only nine but this is probably due to an oversight or a lacuna in the text as there are ten corresponding vital breaths. The missing one is the seventh, which according to the SvT (7/16) is called Aryamā and the TSā (p. 57), Yaśā.

The channels are formed from the breath. They are 'cavities' lined with 'condensed' vitality through which the vital breath moves transporting the bodily fluids (*rasa*) (TSā p. 57) impelled by the subtle life-force of the activity of consciousness. Abhinava (TĀ 7/66cd-67ab) explains:

> The ultimate degree of grossness (*sthulatā*) of the acivities of the vital breath, which are (expressions of) the pulsation of consciousness (*citspanda*), is the Cavity (*suṣi*). Assuming the nature of the channels (of the vital breath) (*nāḍī*), it connects this body together.

It is but natural that there should be ten main channels corresponding to the ten forms of the vital breath. This is what we are told, for example, in the following reference from the TĀ (6/195cd-198ab), which explains the function of the Equalizing Breath (*samāna*):

> Such also is the case with the Equalizing Breath. Circulating everywhere in the channels (that come from) the heart, it is perceived to be of ten kinds (as the ten forms of the vital breath) in all (the ten) directions. Filling the ten main great channels and the other channels linked to them, it is extends throughout the body. Extending in the eight directions, it conforms progressively to the activity of their lords manifesting (as the case may be) as violent or peaceful.

The first channel of the vital breath is Suṣumṇā, the middle one that runs along the axis of the body. This then extends and divides up into primary and secondary channels born from one another to form a network that pervades the body and holds it together. The ones listed in the verses we are examining are the most important. Of these, three are are the primary ones, namely, Suṣumṇā, in the middle, Iḍā on the left and Piṅgala on the right. These are the channels of the Moon of the inhaled breath (*apāna*), the Sun of the exhaled breath (*prāṇa*) and Fire of the upward moving breath (*udāna*), respectively (see SvT 7/153cd ff.). The movement of the breath in all directions is that of the worldly condition. The linear upward motion through Suṣumṇā is that of developing cosmic consciousness that ultimately assumes its original transcendental condition. This is brought about by the resonant Sound (*nāda*) of consciousness through which it articulates as Speech and hence the diversity of thought in the course of its descent. Ascending, it reabsobs the diversity of its product into itself reverting to its original prestine condition.

The following account of the channels and the vital breaths is drawn from the *Svacchandatantra*, which Abhinavagupta accepts as his main authority in this matter. Although the passage is quite long, it is worth quoting in full. We notice in this account that all these aspects are woven together: the vitality of the breath that sustains the physiology of the body, its relationship to consciousness as the Unstruck Sound that resonates through it and its soteriological function:

> The body consists of the six sheaths [of skin, flesh, blood, fat, bones and seminal fluid] conjoined to the gross and subtle elements. The form (of this body) is sustained by the mind, intellect, ego, the organs of knowledge and action and the qualities as well as all the principles of existence and the gods. The (individual) Self (resides) there, as does the energy of the Lord (*prabhuśakti*) and the vital breath that moves by means of the channels (of the breath *nāḍī*). (These three pervade the body but are particularly present) in the navel, below the genitals (*adhomeḍhra*) and in the bulb (*kanda*), (respectively). O beloved, the channels (of the breath), (whether) slanted, (directed) upward or downward (all) emerge from the centre of the navel. Located there, like (the fellies of) a wheel are ten main vital channels. Seventy-two thousand channels emerge from them and others emerge from these and from those others emerge and so on repeatedly. It is said that there are as many channels as there are pores (in the skin of the body). The body of every living being is pervaded by the vital channels just as a leaf of the Palāśa is covered everywhere with filaments.
>
> (The channels) are all filled with the vital breath (*mārut*) that moves constantly (impelled) by the power of the (individual) Self. They differ from one another due to the diversity of (their) separate functions and movement. O fair faced lady, (they each have a) different name due to the variety of their motion and function. One should know that the diversity of the channels and the (vital) breath is a thousandfold. O fair faced lady, the main vital channels are said to be ten. O mistress of the gods, the breaths are present within them. SvT 7/5cd-14ab

Then come the verses found in our text (KuKh 40/31cd-34ab) and the SvT (7/14cd-20) continues:

O beloved, the breaths and the channels are arranged like (the fellies of a) wheel. O fair faced lady, by wandering through them (one attains) success (*siddhi*) and Yoga. And, fair hipped one, by repeating mantra, one attains success in the repetition of mantra. O goddess, three channels out of the ten are said to be supreme. Two are of the nature of the Drop and Sound while Energy is said to be in the middle. (These three), that benefit the adepts, are said to be in the Wheel of the Heart.

Kṣemarāja explains that: the Drop is predominantly the energy of knowledge. It is Prāṇa and the right channel, Piṅgalā, which is of that nature. Sound is predominantly the energy of action. It is Apāna and the left channel, Iḍā, which is of that nature. The (channel) called Suṣumṇā is in between them and its nature is the radiant pulse of the energy of the supreme will.

According to chapter seven of the SvT, the locations, characteristics and functions of the main vital breaths are as follows:

Prāṇa and the rest of these (breaths are) located in the heart (*prāṇa*), anus (*apāna*), navel (*udāna*), throat (*vyāna*) and all the joints (*samāna*). The colour of the five (breaths) is like liquid silver (*prāṇa*), red (*apāna*), (green) like the (insect called) Indragopa (*udāna*), (white) like milk (*vyāna*) and (translucent) like crystal (*samāna*). The sound of the five, *prāṇa* and the rest, is pleasing (like that of a) bell, cymbal, cloud, elephant and the great roar (*mahādhvani*) (of a fast flowing river, respectively). (303cd-306ab)

The activity of *prāṇa* is talking, laughter, song, dance, fighting, the arts, sculpture and all (such kinds of) work. Apāna will cause food and drink to enter (and go through the body) and cause the waste of that to flow down. (It causes) blindness, diseases of the ear and (of the eye, nose and the rest). The Equalizing breath (*samāna*) distributes what has been eaten, licked and drunk equally (throughout the body). (Sexual) arousal (*kṣobha*), hiccups and sneezing (*cchikkā*) is the activity of the upward moving breath (*udāna*). The (bodily) activities (*karman*) associated with the Pervasive (breath) (*vyāna*) are sweating, horripilation, headache (*śūla*), burning (sensations) and the flexability of the limbs (*aṅgabhañjana*) along with (the sensation of) touch. (306cd-310ab)

The (breaths) Nāga and the rest have many forms and are located in the big toes (*nāga*), knees (*kūrma*), heart (*kṛkara*), eyes (*devadatta*) and head (*dhanañjaya*). (Now) learn their functions from me. Nāga and Kūrma give rise to (a sense of) contentment and anxiety, (respectively). Kṛkara dries out (the body).

Devadatta causes (a feeling of) fear and Dhañjaya, the fifth, causes lassitude and conjoins with another (body after death). (310cd-312)

The functions of the five, Nāga and the rest, when dying is exhalation (*śvāsa*) (by Nāga), contraction (of the limbs by Kūrma), cracking (into pieces of the limbs by Kṛkara), howling (by Devadatta) and the exit (of the vital force by Dhanañjaya). When (the other breaths) have left the body, Dhanañjaya does not leave (until the soul exits from it) and Kūrma causes the (joints) to bend and dries out the corpse. (313-314)

The breath (*prāṇa*) should be conquered first. Once the breath has been conquered, the mind is conquered. Once the mind has been conquered, the supreme principle of the tranquil (transcendent) becomes manifest. (315)

One should meditate on the breaths of inhalation and exhalation in (the head and) the anus, the Equalizing breath in the navel, the Upward Moving breath in the throat, the Pervasive breath everywhere. Nāga and the rest, conjoined with the breath, should be blocked in their respective places. (316-317ab)

I will tell (you) the time (it takes to) block (the breaths). Learn it from me. Meditate on that (for the time it takes to move the finger round the body) five hundred times beginning with the sole (of the feet). In this way the breath is conquered (and can be used) for the task of transferring (the breath to another body) and for the exit (of the breath from the body). (317cd-318)

(Once the breath is conquered, the body acquires) divine beauty and an auspicious smell. (The adept's) intelligence develops. (He acquires) divine vision, hearing and divine speech. He wanders through the worlds like the wind and sees Siddhas and gods. He attains whatever he thinks about and the eight yogic powers. All his desires are fully satisfied and he is free of all duality. He is free of the bondage of transmigratory existence and becomes Śiva's equal. (319-320)

Conjoining the inhaled and exhaled breath along with their short measures (*hrasvakoṭi*) (of sonic energy) in the foundation of the navel, the Lord of Yogis sweats and shakes. Again, he should block the inhaled and exhaled breath located in the heart. By the conjunction with a long measure (of sonic energy), in a moment he leaps up from the ground. He should in the same way block the breath here that is in the throat. By conjunction with the prolated (*pluta*) (energy of Sound), he falls (into a yogic) sleep. If he blocks the breath in the centre of the eyebrows in conjunction with the Drop he falls there into a deep sleep and wakes up (to a higher reality) in an instant. (321-325)

Entering the Door of the Head, he should begin the meditation without parts (*niṣkala*). Then, he who has practiced in this way has this experience (*pratyaya*): piercing through the door in the head (he feels that) ants (are crawling on his head and then that he is being) pierced by a thorn. O goddess, having broken through all (these levels) ending with the Transmental, progressively (accompanied) by the aforementioned signs (*lakṣaṇa*) and, having abandoned (them), he attains freedom (*svacchandatāṁ vrajet*). (In this way) the Transmental state arises within the adept by means of this body. (Once he attains this) he is able to transfer (his consciousness) into others' bodies. He is not afflicted by hunger and thirst. He sees the past and the future (throughout) the triple world and he becomes omniscient. SvT 7/326-340ab.

Physiologies of the vital breath related to states of consciousness are very ancient. The early Upaniṣads already describe the conduits along which the vital breath travels. The breath moves through them, up and down, out and into the body and with it travels the individual soul who is thereby transported through various states of consciousness. In the *Bṛhadaraṇyakopaniṣad* (2/1/19) we read(translation of this the other passages from the Upaniṣads are by Hume):

Now when one falls sound asleep (*suṣupta*), when one knows nothing whatsoever, having crept out through the seventy-two thousand channels called *hitā*, which lead from the heart to the pericardium, one rests in the pericardium. Verily, as a youth or a great king or a great Brahman might rest when he has reached the summit of bliss, so this one now rests.

The same Upaniṣad teaches that Indha, also called Indra, resides in the right eye. His wife, Virāja, resides in the left one. When one falls asleep they travel down through these channels and they meet in the space within the heart. There they nourish themselves with the ‘red lump in the heart’. When one awakens the couple returns up to the eyes by means of a channel that travels up from the heart (ibid. 4/2/3). Fine as a hair divided a thousand times, these channels (called *hitā*) spread out from the heart in a fine network. Filled with white, blue, yellow, green and red vital fluids (ibid.), they transport the subtle essence of food. The most important amongst them is the channel that leads upwards along which the individual who is destined to achieve liberation travels when the body dies. In the following passage from the same Upaniṣad (4/4/8-9) the sage Yajñavālkya proclaims he has found this ‘narrow path’ and has travelled on it:

The ancient narrow path that stretches far away
Has been touched by me, has been found by me.
By it the wise, the knowers of Brahma, go up
Hence to the heavenly world, released.
On it, they say, is white and blue
And yellow and green and red.
That was the path by Brahma found;
By it goes the knower of Brahma, the doer of right (*puṇyakṛt*),

And every shining one.

According to a source quoted by the *Chāndogyopaniṣad*, which may well be earlier than the *Bṛhadaraṇyaka*, the channels are only one hundred and one. Of these, the most important is the one along which the vital breath travels down into the body when, at a certain point in the development of the fetus, it enters it through a cavity at the top of the head. The vital breath of those who die knowing the true nature of things and their origin choose to travel out of the body by the same channel through which they entered it (see note to KuKh 2/4cd-6ab). Others leave the body in other ways. Thus this, the last journey of death, is like the little death of sleep or the change of consciousness that takes place by the practice of Yoga. The *Chāndogyopaniṣad* (8/6/6) declares:

There are a hundred and one channels of the heart
One of these passes up to the crown of the head.
Going up by it, one goes to immortality.
The others are for departing in various directions.

Yama, the Lord of the Dead, explains to Naciketas in the *Kaṭhopaniṣad* (2/2/6) why most people fail to choose the right path to leave the body:

The passing on is not clear to him who is childish,
Heedless, deluded with the delusion of wealth.
Thinking `This is the world! There is no other!' –
Again and again he comes under my control.

The understanding of this movement of the breath and the function of the vital channels led those who sought liberation to attain it by these means directly by reproducing what happens at the moment of death. Thus, the first forms of the Yoga of the vital breath all focused on the journey of the soul transported by the breath along the 'narrow path'. This came to be called Suṣumṇā to which we find the earliest reference in the following passage in the *Maitryupaniṣad* (6/21):

Now it has elsewhere been said: 'there is a channel called Suṣumṇā, leading upward, conveying the breath, piercing through the palate. Through it, by joining (*yuj*) the breath, the syllable OṀ, and the mind, one may go aloft. By causing the tip of the tongue to turn back against the palate and by rubbing together (*saṁyojya*) the senses, one may, as greatness, perceive greatness.' Thence he goes to selflessness. Because of selflessness, one becomes a non-experiencer of pleasure and pain; he obtains the absolute unity (*kevalatva*). For thus it has been said:

After having first caused to stand still
The breath that has been restrained, then,
Having crossed beyond the limited, with the unlimited
One may have at last union in the head.

24. The symbolism of the letter A is important in many of the more esoteric Tantric systems including the Kālīkrama and the Buddhist Mahāmudrā school. The letter A represents the highest reality. The energies of the Self, represented by the Drop, are aspects of the energy of the letter A. These are Vāmā and the rest who emerge from it and merge back into it in 'Śiva's Abode' at the End of Emission (40/50cd-51ab). They are projected into its graphic representation in the manner described below (see 40/127cd-128ab).

25. A is Brahmā's letter and I, U and Ma are those of Viṣṇu, Rudra and Īśvara, respectively. These are neither the standard set of the five 'instruments' – Brahmā, Viṣṇu, Rudra, Īśvara, and Sadāśiva linked to Sadāśiva's five faces, nor the classic triad Brahmā, Viṣṇu and Śiva / Rudra who are linked to the three letters A, U and Ma that constitute OṀ. The two formates have been associated from Pāśupata times. Nagaswamy (2005: 315) explains summerizing Pāśupata view recorded in the *Liṅgapurāṇa*:

> Narrating the appearance of Liṅgodbhava [the origin of the Liṅga], the Purāṇa says that a luminous shaft burst forth with a thunderous sound OṀ, consisting of three syllables, A, U and Ma, from which emanated the Vedas that appeared as a *ṛṣi*, from whom Viṣṇu learnt of the Supreme Being. The physical visualization of the Supreme proceeded from this primordial sound and so the Lord is said to be constituted by the syllables, words and hymns, as *vidyādeha*. This is also known as *mantramūrti*, the hymnal image, in which the five Vedic hymns – Aghora, Vāmadeva, Tatpuruṣa, Sadyojāta and Īśāna hymns – constitute the five basic *mantras.*

26. TS adds: There Word should be dissolved away, withdrawn into its own product. Brahmā dissolves away in the throat and is established in the previous foundation.

27. TS: That is Viṣṇu's supreme place. The letter I is located there. Viṣṇu also goes to the end of Rudra, **where the letter U is located**. **Know that that is the end of the palate, the confluence of all** living beings. **Rudra also goes to the Lord (Īśvara) where the letter Ma is located.**

TS 1/77cd-79ab

28. KuKh 40/41-45 = TS 1/35cd-40ab, quoted above in note to 40/13.

29. The TS says instead: (This) knowledge has not been imparted to them because of (their distracted) mental activity.

na teṣāṁ kathitaṁ jñānaṁ cittavṛtter apekṣayā [k, kh, g: -vṛttira-] || TS 1/36cd

30. Instead of this the TS says: O goddess, I have explained what has been requested (of me) concerning that, (nothing else).

yenāsya [k: yeṁcāsya; kh, g: yecāsya] cārthitaṁ [k, kh: -to; g: -no] devi tat tathā kathitaṁ mayā | TS 1/37ab

In other words, in the TS Bhairava is telling the goddess that he has not taught what he is about to teach her to others because their minds have been so confused by the many Tantras of various types that nobody ever asked him for this knowledge. He has only taught what he was requested to teach, no more, no less. See above, note to 40/13 for TS 1/37cd-38.

31. The context warrents this translation and was probably what the redactor intended. However, it is clear from the the last two lines that complete this passage in the TS that are missing here and the original context that this was not the meaning. These lines are found above (KuKh 40/14 = TS 1/40cd-41ab). In the original source, what is here 40/41-45 (= TS 1/35cd-40ab) is preceded by what is here 40/46-49ab (= TS 1/28-32. TS 1/33-35ab is missing in the KuKh) and it comes after what is here 40/13 (= TS 1/26cd-27ab). But this verse belongs below just before KuKh 40/46 and it is followed by TS 1/40cd-41ab which should come at the end of the passage here. The original text reads:

It is because of (their) pride (in their limited) knowledge and (their) indifference that (this question) has not been asked. Brahmā, Viṣṇu, Rudra, Indra, Candra and Prajāpati, all the hosts (of attendents including) Skanda and Nandi, (the gods) including Śukra and the rest as well as the yogis – **all those who have understood that have been successful.** That, O fair lady, has been grasped in this way (by those with) **dull intellects.**

32. The relationship between Śiva and Śakti cannot only be described indirectly. They are one reality, not two set in relation to one another. Dualists maintain that an inherent quality invariable inheres in its substance – like 'solidity' in earth. But although the relationship is one of invariable concomitance (all that is solid is, partly at least made of 'earth') substance and quality are separate realities. But the oneness of Śiva and Śakti is not like that. They are completely one.

33. This passage follows after what is the equivalent of 40/14 in the TS. Here it appears abruptly and is misplaced. KuKh 40/46-49ab = TS 1/27cd-32. The TS (1/27cd) continues with what is here KuKh 40/46-49ab.

34. TS adds 1/30-31cd:

Śiva is taught to be mantra and the letters of that (mantra) are (its) denotators (*vācaka*). Śiva is attained by virtue of the union of the denotator and the object of denotation.

(So) O god, having abandoned Maheśvara, where has Śakti gone that these mantras, whose radiant power is without limit, have become fruitless? How has Mātṛkā come into being (or g: 'is known') – she who is the mother of mantras?

mantraḥ śivaḥ [k, kh, g: śiva] samuddiṣṭo [g: ?] varṇās tasyaiva vācakāḥ |

35. TS adds: Tell me about her, she who is the source (*yoni*) of all the Skyfaring (goddesses).

khecarīṇāṁ ca sarvāsāṁ yā yoniḥ kathayasva mām | TS 1/32cd

The following continues directly in the TS from what is here verse 40/40 (= TS 1/79ab)

36. Nirodhī also called Nirodhikā blocks the way up for Yogis who have not received enough power to rise further. However, if they do, the same energy prevents them from falling once they are beyond it. In this way the energy that

blocks the ascent leads up to the next level which is Raudrī and keeps the yogi there.

37. TS: Above that is the goal born from Sound. The letter Ma goes there. **That is said to be Śiva's abode (*sthāna*)** where Sound originates.

tasyordhve nādajaṁ lakṣaṁ makāras tatra gacchati ||
śivasthānaṁ tu proktaṁ yatra nādasamudbhavaḥ | 1/80cd-81ab

Paraphrasing the *Triśirobhairavatantra* Abhinava (TĀ 3/140) writes: 'The supreme (form of) Kuṇḍalinī is (experienced) at the extreme end of emission (*visargaprāntadeśa*). It is said to be the Śiva's Sky (*śivavyoman*), the supreme abode of Brahman and the Self.'

38. This sentence is a reduction of these two lines in the TS:

And, O beloved, it is above the uvula (*lambaka*) where your two Drops (are located). Fair lady, that is **said to be at the End of Emission (*visargānta*)** and the End of the Twelve.

lambakasyordhvataś caiva dvau bindvau (k: divyau) yatra te priye ||
visargāntaṁ tu taṁ proktaṁ dvādaśāntaṁ ca bhāmini | TS 1/81cd-82ab

39. Instead of 'That is said to the End of Mind (*manānta*),' the AS and TS say: 'that is said to be the End of the Sixteen' (*ṣoḍaśāntaṁ ca tat smṛtam*).

40. AS and TS: 'the upward current (which is) Mind Beyond Mind (*manonmanī*)'.

41. AS 20/78cd: **It arises there in a clearly distinct manner** from the teacher's mouth in particular (*guruvaktrād viśeṣataḥ*).

TS: **'**O mistress of the gods, Mind Beyond Mind merges there **at the end of the Pervasive One (Vyāpinī). It arises there in a clearly distinct manner,** O beloved, it is below the teacher's mouth.'

42. AS (20/79ab): The Supreme Place is on the teacher's head. (The wise) know that to be the Abode of Brahmā. (*gurumūrdhni paraṁ sthānaṁ brahmasthānaṁ tu taṁ viduḥ* |)

TS 1/86ab: The Teacher's Mouth is above it. It is said to be the Abode of Brahmā. (*tasyordhve guruvaktraṁ tu brahmasthānaṁ tu taṁ smṛtam* |)

AS (20/79cd) and TS (1/86cd): And that is said to be the Abode of Śakti which is said to be the end of merger. (*śaktisthānaṁ smṛtaṁ tac ca layāntaṁ [AS: layāṁte] tu tad ucyate* ||)

43. According to 40/16-17 above, this is the Supreme Drop (*parabindu*). See also 33/50-51 and note.

44. AS**:** which is the binding power of the fear of transmigratory existence (*saṁsārabhayabandhanī*)

TS: which is the binding power of the fettered state of transmigratory existence (*saṁsārabhavabandhanī*)

45. The word *'uccāra-'* literally means `upward movement'. This 'upward movement' of energy through these phases of progressive merger into higher states takes place constantly. Connecting the lower levels to the higher it sustains their existence. Once the movement has reached its upper limit and everything has dissolved away into the transcendent, it spontaneously develops again into the pure will (*icchā*) that impells the downward development into manifestation. In the fettered state – when the soul is 'sleeping' – the downward development is binding and dominates so strongly that there is no consciousness of its upward counterpart. Conversely, when the soul is awake (*prabuddha*) the upward, liberating movement dominates and becomes so intense that ultimately the soul mounted on the upward current remains established in it and is transported all the way to the summit to attain the supreme state consciously.

46. The TS and AS insert:

TS: This is the Yoga of the Point. If one tries to abandon (it) . . .

AS: This is the Yoga of piercing. If one tries to abandon it . . .

47. According to the KuKh the Knot of Brahmā is located between the Wheel of the Self-supported and the Wheel Full of Gems (7/39cd-40ab). It is the syllable AIṀ. See 38/31ab; 60/31-32ab; 62/20-21ab. Although Brahmā's syllable in the system of the TS is AIṀ; it is not located in relation to these inner Wheels, that are unknown to it.

48. AS and TS: O fair lady, if Brahmā's Abode is abandoned . . .

49. TS: '(travels up to) the cause of Brahmā (*padmaja*) . . .

50. TS adds: Brahmā, in the form of an effect (of the higher principle beyond), travels (upwards) having withdrawn (into himself) his creation. He dissolves away into the Viṣṇu principle along with his creations and instruments.

51. Keśava is Viṣṇu.

52. These lines appear to be out of place. They are not found in the AS or the TS.

53. TS adds: All assume the form of action and laying hold of his own quality (each one) goes (to the next level of merger). They are all merged in Śiva and have withdrawn their form along with their own energy. (They are the powers

of) will, knowledge and action that are the instruments of all of them. O fair lady, their return (*pratisaṁcāra*), which is as before, has been explained here.

54. Instead of *binduḥ* the TS reads *viśvī*.

55. TS: the Drop of the mind (*manobindu*).

56. AS : Even if the sixfold Path has been purified . . . (*ṣaḍvidhe 'dhvani śodhite*).

57. TS reads *amanaskā* instead of *anāmākhyā*.

58. AS: . . due to the (countless) varieties of (her) creation (she is divided) endlessly (*kṛtyabhedād anantataḥ*).
TS: due to the (countless) varieties of (her) creation there is no end (of her forms) (*kṛtyabhede anantatā*).

59. TS: And she certainly withdraws (it).

60. AS: Subtle, she emanates from the form of passion; in the form of Jyeṣṭhā she protects (it). Withdrawal takes place by means of (her) Raudra form. (Thus the power that is both) one and many is **threefold**.

TS: Initially she emanates in the form of Vāmā. (Her) form is Jyeṣṭhā when (she is engaged) in protecting (it). Withdrawal takes place by means of (her) Raudra form. **(Thus),** O beloved, **the one (power) is threefold**

61. The goddess is fivefold as the energy of the Five *Praṇavas*. She is eightfold as the Eight Mothers and ninefold as the energy of Navātman and has fifty divisions as the fifty energies of the letters of the alphabet. See below, 40/115-123.

62. AS (20/108ab): **Therefore,** in the *maṇḍala* **she who is consciousness (*jñāna*), is called Māyā.**

63. AS and TS: and he is endowed with the attributes in (each of the five) causes (of phenomenal existence). (AS: *tair yukto [te yuktā] bhavate hyasau* TS: *taiḥ (k, kh, g: te) saṁyukto bhavaty asau*)

64. AS and TS: She too dissolves away in the Cavity, that is, in the Void which is the lotus AS: of Kula / TS: O beloved.

65. Cf above 38/23. AS: It is the Cavity (*śuṣira*) which is the essential nature of Brahmā (*padmaja*).
TS: It is the Cavity (*śuṣira*) of Brahmā (*padmajanman*).

66. AS (20/111ab): (He is) **in a state of union within (that place) and withdrawn** into the good creations of those who desire liberation.

tasmin yukte mumukṣūṇāṁ sukṛteṣu ca (na) saṁhṛtaḥ |

TS: **In a state of union within** (that Place) he is freed and **(his) creation is withdrawn.**

67. AS and TS: He desires liberation.

68. AS and TS: He is Śiva, the supreme liberation.

69. KuKh 40/90 is missing in both AS and TS.

70. This teaching is clearly inspired by the *Bhagavadgītā* where we read: "Raise self by self, let not the self droop down; for self's friend is self indeed, so too is self self's enemy. Self is the friend to the self of him whose self is by the self subdued; but for the man bereft of self self acts as an enemy indeed." (BhG 6/5-6. Translation by Zaehner)

71. AS and MSs of the KuKh: **(the liberated one) is** the knowledge of Yoga (*yogavidyā*). TS: O beloved, b**y means of this sequential Yoga (*kramayoga*)** the wise should know (the reality) which is) the **Point of Union (*yogabindu*)** that has been mentioned briefly.

73. TS: she has gone above.
TS adds: O fair lady, (she is knowledge, action and will). Having abandoned the creation of Brahmā and the rest, (each) in his own place, she has gone (beyond).

74. TS: **having grasped the Point of the Mind (*manobindu*),** she has come out by means of the Five Voids.

Concerning the Five Voids see 25/38-40, notes to 25/2-3ab and 55/2-4ab below.

The practice of Abandoning the Causes (*karaṇatyāga*) is described briefly in SvT 4/262-266. There it is presented as the progressive rise of consciousness through the phases of the syllable OṀ in consonance with the pervasions of the vital breath through the centres of the body, each presided over by one of the Five Causes. The process is called the Abandonment of the Causes because as the breath-consciousness rises from one to the other, the lower is abandoned for the higher. This rise can be represented schematically as follows:

11. Phases of OṀ

Phases of OṀ	Cause	Location in the body
A	Brahmā	Heart
U	Viṣṇu	Throat
M	Rudra	Centre of the Palate
Point, Half Moon, Obstructress	Īśvara	Between the Eyebrows
Sound, End of Sound	Sadāśiva	From the forehead to the head
Power, Pervasive One, Equal One and Transmental	Śiva	Centre of the head upwards

The level of the Equal One (*samanā*) is projected into the Topknot (*śikhā*) at the apex of the microcosmic body. Here the yogi experiences the oneness (*samarasa*) (lit. 'equalness of flavour') of all things as his consciousness is not directed at a specific object of awareness (*mantavya*) and his mind abides in a state of pure indeterminate awareness (*mananamātra*). In going beyond this level the yogi's consciousness becomes pure and by resting in the power Beyond Mind (*unmanā*) the nature of which is undivided light, he attains Śiva (SvT vol. 2 p. 166). In this way, the yogi goes beyond even the level Beyond Mind and so abandons the six causes and merges into the seventh which is Supreme Śiva beyond them. The SvT describes it as: 'extremely subtle, the supreme state (*bhāva*) said to be Non-being.'

Kṣemarāja comments: 'The supreme state is the supreme (condition of) Being (*sattā*) of Supreme Śiva. It should be know to be extremely subtle and the universal cause which, because it is the cessation (*prakṣaya*) of all (conditioned) being, is Non-being.' (SvT 4/268cd and commentary) At the same time, the power of the Transmental is the direct means to the supreme state of Non-being. Thus while contemplation of the lower phases in the development of OṀ bestows yogic powers (*siddhi*) of an increasing order of perfection, it alone bestows liberation directly. Therefore the SvT enjoins that the yogi should constantly contemplate the supreme and subtle Non-being by means of Transmental (ibid. 4/277ab). This is because Non-being is beyond the senses and mind and is, according to Kṣemarāja, the pure knower who has no objectively distinguishable characteristics (*alakṣya*). The SvT (SvT 4/278) concludes:

Non-being should be contemplated by means of Being having rendered Being without foundation. (In this way) one attains the plane of Non-being free of all limitation: this is the abandonment of the causes.

Kṣemarāja comments: ‘The plane whose nature is Non-being is that on which no phenomenal entities (*bhāva*) exist. It should be contemplated by Being which is supreme Existence (*parasattā*) of the nature of consciousness. (In respone to the query) 'surely the consciousness-principle is that which bestows being?' (he replies by saying that this is to be done) 'having rendered Being without foundation.' 'Being' is that which exists (namely everything) from Sadāśiva to Earth; this is rendered without foundation and free of support in its tranquil (unmanifest) state by penetrating into the abode of power having made it of that nature (i.e. the Transmental).’

75. AS: she illumines the lotus fibre. TS: or is like a lotus fibre.

76. I do not know what is meant by ‘*śaṅkhabandha*’. It occurs after the Five Causes are ‘abandoned’. The former correspond to the Five Elements and all that is associated with them. The sixth condition beyond is the Transmental. Prsumably, the attainment of this state is ‘*śaṅkhabandha*”. This phase in the ascent is not noted in either the AS or TS. Here it appears as an intermediate one meant, perhaps, to reinforce the thrust of emission that projects Kuṇḍalinī further beyond. Alternatively, we may simply consider this line to be spurious.

77. Instead of KuKh 40/97 the TS reads: O goddess, she is like a fibre in a leaf and her form is (like) a snowflake. Having grasped her, she who is such, sever (all the) rest of the fetters.

The second sentence alone corresponds to KuKh 40/97 in the AS.

78. TS: **Then she moves (impelled) by emission (*visarga*)**, having dragged along (the Drop) located in the Heart.

79. TS: + In the same way the yogi who is in the body should drag along the breath of the Heart.

80. TS (1/132) adds: The mind should be fashioned in the same way by the oneness in the foundation of Energy. If, having abandoned all the causes, Rudra’s state (*gati*) (ensues) . . .

81. AS: Then it is freed within the circle between the eyebrows.

tadā mukto hy asau [citau] vai [dvai] tu bhruvorantaramaṇḍale
[druvoraṁtaramaṇḍale] | AS 20/123ab

82. TS (1/133ab): Then, O (goddess) with auspicious eyes, with the two eyebrows raised, (the Drop) should be cast upwards (*vikṣepa*) and the two eyelids should be closed.

The word ‘*vikṣepa*’ means both ‘casting the eyebrows upwards’ and ‘projecting’ or ‘throwing’. The two meanings coincide. Closing the eyes, the eyebrows are raised repeatedly to push the Drop that is between them upwards. This practice is called ‘the formation of the bridge’ (*setubandha*) Cf. VB 31.

83. TS: O mistress of the gods, the Trident should be placed in the Skyfarer.

This is the Trika Trident on the prongs of which are the three goddesses of the Trika – Parā, Parāparā and Parā and the three principles of Vidyā, Ātmā and Śiva associated with them. The Trident is a way of representing the unity of these and all the other Trika triads. By placing the Trident within Śiva, the Skyfarer, the triads fuse into his transcendental unity.

Worth noting in passing is that according to the KMT the Trident is in the centre of the Wheel of the Skyfarers in the End of the Twelve. But 'the mouth of Vaḍavā is above the Trident' (ibid. 16/24). Thus Kubjikā as the Vaḍavā Fire surpasses the Trika. Concerning this Trident, see Heilijgers-Seleen 1994: 165 ff.

84. The AS replaces this line with: The vital seed (*śukra*) shines like a particle of snow in the Wheel with fibres and petals. Present within the channel (of the vital breath) that also has become potent.

The TS says instead: One should squeeze with the two hands (the Drop) that has reached the secondary door. It travels upwards quickly where there is the Cavity of Brahmā. O mistress of the heroes, the state of the channel (of the vital breath) arises in this way and not otherwise.

85. AS and TS: When the state of the channel (of the vital breath) arises **one should then abandon the (five) causes** . . .

86. TS: Maheśvara who is the foundation of the vital channels certainly acquires (all) the things of the past present and future. (+ 1/139-140ab): And the past is in the navel. The present is in the Heart and the future is in the uvula if he becomes one with Energy (*śaktisama*). Endowed with knowledge and wisdom he enters the eternal body.

A long passage follows from here in the *Tantrasadbhāva* (1/141-205ab = SvT 4/234-296), which has also been omitted in the *Ambāmatasaṁhitā*. See appendix 3.

87. The metaphysical core of the Trika system the TS expounds is centred on the contemplation of the one reality which is so absolutely transcendental and beyond all charaterization that from our point of view it is the emptiness of Nothing. But it is not the Void of total non-existence. It is the Emptiness that, without denying reality to existence shifts our attention from the bondage of 'Being' to the liberation of 'Non-being'. This is achieved by continuing where the SvT leaves of. There 'Non-being' is the highest Void. It is left to the TS to expound what this means, as we shall see further ahead. At this point the TS prefers to return to Kuṇḍalinī, so dear to the Kaula Path. It goes on to discuss the yogi who is 'established in energy' (*śaktistha*) thus continuing its exposition of the rise of Kuṇḍalinī of which this chapter is a substantial part. The fullness of Kuṇḍalinī's rise liberates from the ignorance that consciousness is exclusively located in the physical body and so leads to the realisation of the all-pervasive

nature of the Self, a state technically called *Ātmavyāpti* – Pervasion of the Self. This state spontaneously leads to the realisation of Śiva's pervasive presence termed *Śivavyāpti* – Pervasion of Śiva – and the yogi 'established in energy' thus becomes one who is established in his authentic nature (*svabhāvastha*). This is a state beyond all states and levels including the contemplation of emptiness (*śūnyabhāva*) as well as Śiva and Śakti. It is achieved by abandoning all dichotomizing thought constructs (*vikalpa*). One who does not hanker after anything, including liberation, is liberated from the duality of bondage (*amokṣa*) and liberation, realising that it is nothing but a thought construct.

The notion of duality (*dvaitabhāva*) conceived spontaneously by the mind causes limiting conditions to proliferate. In order to achieve liberation the yogi must abandon all being by giving up the notion of existence that generates phenomenal being. The yogi must abandon all sense of personal existence along with that of anything else. Initiation, meditation, the repetition of mantra or any other discipline cannot lead to the understanding of ultimate reality, which is free of all distinguishable characteristics (*alaṣya*). Their purpose is just to still the fickle mind. In order to move out of the fettered condition of Being, we must go beyond it into Non-being.

The aim is to realise the Equality (*samatā*) present in all things. This is done by first abandoning all existing things and states of being (*bhāva*); the mind thus freed of thought-constructs is established in Non-being (*abhāva*). However, this is not the end of the path. The yogi must also abandon Non-being and become established in the authentic Being which is his true nature (*svahāva*). In this way the mind (*manobindu*) disappears instantly like a drop in a mass of water. Thus the yogi is to abandon attachment both to the world of thought and sensations as well as to the tranquil (*śānta*) state of Non-being to attain the supreme state that is free of the subject who impels and the object of impulse.

So how is it possible to attain this state, if there are no means to do so? The means that are of no use are those that are external. The Absolute is Śiva and he is himself the power by which he is attained. This is Kuṇḍalinī, whose nature the Trika yogi discovers when he is 'established in energy'.

88. AS: I will explain the certainty which is the Kula realisation of Avarṇa and Varṇa that takes place by reflecting on the nature of Varṇa and Avarṇa.

TS: . . . **how,** O sinless one, **(the energy of) Unstruck Sound (*avarṇā*) (abides) in union with (the energy of) Letter.**

89. AS and TS: O goddess, the mantras that were uttered in the beginning (of creation) numbering seven thousand million were previously hidden and brought down to earth in the form of letters.

90. The TS adds: O fair lady, they have been hidden from the gods, *ṛṣis*, Yakṣas, Gandharavas, Kinnaras, Siddhas, the societies of snakes, those yogis and men who low people devoid of devation. They do not know the teacher, the god

or the Rules laid down by the scripture. Out of greed they are dedicated to cheating and deceit and are devoid of ritual. For this reason I have hidden the vitality (of mantras). O mistress, with that hidden all that remains are the letters.

91. TS: She is Parā who is endowed with radiant energy.

92. TS: O god, worshipped by the gods, **if she is there as the pervader (of all things)**, **it is like the phonemic energy (*varṇa*) (of the letters),** the **omnipresent** Lord, **present in the letter 'A' (of Unstruck Sound) (*avarṇa*).**

93. The passage beginning from here up to verse 120 corresponds to TS 1/215ab ff . It is quoted in ŚSūvi (p. 80) and the commentary on TĀ 3/66.

94. AS (she is) **beyond the bounds of scriptural injunction** and without fault.

95. TS: O Umā, greatly endowed one, she sleeps there and knows nothing at all. TS adds here (1/217): That goddess, placing in her belly the Moon, the Sun, Fire, stars and fourteen worlds, (sleeps) like one affected by poison.

96. TS (1/222ab): She is awakened by the resonance which is supreme knowledge. (*prabuddhā sā ninādena pareṇa jñānarūpiṇā* |).

The TS continues: O fair lady, she is churned by the Drop in (her) belly. That is the 'churning' that takes place by (its) spontaneous rolling within the form of Śakti. The first to arise within (the sphere of) duality (*bheda*) is the Drop of the radiance of energy (*tejavarcas*). Having churned Kuṇḍalī, the subtle energy of the Drop with that, the Drop who is the Lord consisting of the four energies in the womb of (that) power then straightens by the union of the churner and the churned. (Kuṇḍalī) is then called the power Jyeṣṭhā who is in the middle of the two Points**.**

100. TS: Speech originates in this way. The moving and unmoving (world) is pervaded by speech.

TS (1/230-231ab): Deposit Raudrī first on the head. Vāmā is said to be in the mouth. Ambikā is said to be the arm and Jyeṣṭhā the weapon. Śrīkaṇṭha is said to be the pervasive Supreme Lord.

Compare the following passage from the *Maitryupaniṣad* (Maitri 7/11/4-5):

The mind stirs up the body's fire (*uṣman*);
the fire then sets in motion wind;
The wind then, moving through the chest,
Produces pleasurable sound.

As stirred in heart by means of fire of friction,
Less is it than the least; in throat, is doubled;
And know that on the tongue-tip it is trebled;
Come forth, it is the alphabet! – They say thus.

101. All the MSs read *mahābalāḥ*. The AS reads *mahānilāḥ* 'great winds'. This is the reading of MS Kh of the TS. The other two MSs of the TS read *mahābilāḥ* – 'great cavities'. Cf. TS 1/442ab in note to 41/34cd.

102. The TS (1/233-235ab) adds: They have been explained by the God of the gods in accord with the distinction between the causes and (their) effects. In this way a separate extraction (of the letters different from those in other scriptures) is extolled in the (scripture of) Twelve Thousand (verses). O Pārvatī, the names of the troupe of Rudras have been listed here. They too are pervasive, eternal, the form of Word and endowed with (all its) qualities. This is the distinction between the denotator and the object of denotation. Nine of these come next.

107. AS and TS (1/241): Ambikā is in many places. She is established when everything has been abandoned. She should be known to be Kuṇḍalī alone. Nothing else is made manifest.

See intro. vol. I, p. 291 ff. Jayaratha explains the process of emanation of these energies as follows:

Parā is that power of (Akula). It is expansion of the body of Kula and so is venerable. (She is in other words) the cause of that body and so she is called 'Kaulikī'. In this way Parā herself is the subtle power Kuṇḍalinī. She rises when one attains the union (of this energy) with Śiva. (This union) is the mutual state of oneness (*sāmrasya*) consisting of (the union of) the 'churner' and the 'churned'. When this takes place (she) assumes the nature of will, knowledge and action and, having done so, she unseals (*unmudrayantī*) Raudrī's state, which is in the form of a (triangular) water chestnut. (As she does this) she takes the support of Ambikā's state whose form is the crescent moon and nature of the letter 'U'. And (then) assuming the state of Jyeṣṭhā, she manifests in the form of a clear (straight) line that reposes in the Drop within the letter 'Ra', that is, the Fire of Time that has risen out of the lunar Drop. In this way she generates the body of the first letter (i.e. A). Comm. TĀ 3/67.

108. AS: **He (who knows this) possesses power and is a (true) Kaula (*vīra*).** Just as you are he is my beloved one.

TS (1/243): **He (who knows this) possesses power and is a (true) Kaula (*vīra*).** He is as dear to me as you are. He is the best of adepts and is most worthy of worship.

109. AS The form of Śakti is (generated) by (their) union (*saṁyogāc chaktirūpaṁ tu*)

TS: (Their) union is in the form of Word *(saṁyogaḥ [k, kh, g: -yoga] śabdarūpas tu)*

110. TS adds (1/246-247ab): In the same way the energies are manifest in each letter. The will is said to be Raudrī. Vāmā is said to be (the power of) knowledge. O lady with the auspicious look, action is said to be Jyeṣṭhā and Ambā is (all) that should be known.

111. TS: Then sunset takes place.

112. AS: She is said to be the New Moon (*amāvāsyā*).

113. The two Drops are the Self and the Supreme State. See above, 40/16, 17 and 40/56.

114. The classic location of the Self is the heart. Between the navel and the throat, the flux of Jyeṣṭhikā's energy would be 'in the middle' between these two. But it is less complex to assume a linear ascent. Accordingly, I suppose that the 'two Drops' are located on the the two eyebrows with Jyeṣṭhikā in the middle between them. Beyond her is Ambikā in the Cavity of Brahmā at the top of the head.

115. TS: And Jyeṣṭhā is in the dream state (*jyeṣṭhā svapnagatā caiva*)

116. TS (1/254ab): O goddess, the plane is called deep sleep and that is said to be the Transmental (*unmana*).

suṣuptākhyaṁ (kh: suṣumṇākhyaṁ) padaṁ devi unmanaṁ tu tad ucyate |

Jyeṣṭhā is the energy that elevates the yogi's consciousness to the state Beyond Mind when he is sleeping. Raudrī is the Transmental state attained in the Void of deep sleep. Thus 'Raudrī is impelled by Jyeṣṭhā' who is operating in the dream state.

117. **12. The Four Energies: Vāmā, Jyeṣṭhā, Raudrī and Ambikā**

Goddess	Vāmā	Jyeṣṭhā	Raudrī	Ambikā
Seed-syllable	Kuṇḍalinī	Sexual organ	Head	Energy
Deity	Brahmā	Viṣṇu	Rudra	Īśvara
Time of Day	Dawn	Midday	Sunset	(Timeless)
Phases of the Breath	Exhalation	Inhalation	Retention	Established in Self
Vital Channels	Iḍā	Piṅgalā	Suṣumṇā (Viṣuva)	(Beyond the three Channels)
State of Kuṇḍalinī	Emergence (*udbhava*)	Disjuction (*viśleṣa*)	Merger (*laya*)	Beyond Merger (*layātīta*)
Location of Kuṇḍalinī	Navel	Between Two Drops	Throat	Cavity of Brahmā
States of Consciousness	Waking (mind)	Dream state	Transmental in Deep Sleep	Fourth State

118. It seems that Kuṇḍalī corresponds in this case to Jyeṣṭhā.

119. TS: The second is Mind Beyond Mind (*manonmanī*).

120. TS: The third is called Vindvī.

121. TS (1/256ab): (The first two energies are) in emergence and disjunction. The third is in merger.

123. AS and TS: O Śambu, **having known** the divine transmission that **is without cause or action or that which should be taken up or abandoned** one is not born again.

124. Instead of these lines TS (1/260) reads: Just as water in a pipe impelled by a machine flows (with force), **in the same way the Drop** travels rapidly (*anudhāvati*) **(impelled) by the utterance** (of mantra).

125. AS and TS (1/262cd): The Auspicious is conjoined with the Tortoise and (it is) purified with the weapon of the Arrow.

maṅgalaṁ kūrmasaṁyuktaṁ śarāstreṇaiva śodhanam ||

The Thread of the Tortoise appears to be the channel of Suṣumṇā. As the energy of Kuṇḍalinī raises through it, the yogi manifests the outer signs described in the following verses that mark the stages of her ascent. Cf. the Thread of Power mentioned in 41/52.

126. TS (1/263cd-264): By the pure path **one should perceive the possession (by the deity)**. + One should take possession of one who is in the Foundation of Energy by means of the mind. O fair faced one, there is a sign of attainment of that act of taking possession (*grahaṇa*).

*manasā grahaṇaṁ [kh: gṛhaṇaṁ; g: grahanaṁ] kāryaṁ śaktyādhāragatasya [k: śaktādarasthasya; kh: śaktyādaragatasya; g: śaktyāda * * * *?] tu* |

127. The TS (1/266ab) adds: These are the signs of attainment in the navel. Now listen (to those) of the throat.

128. See above notes to 33/47-49.

129. TS adds 1/267cd-282. See notes 31 to 34 of chapter forty-one.

130. Instead of '*abhāvasthaṁ*' the TS reads '*svabhāvasthaṁ*' – established in one's own nature'. Below in chapter 57 we are told that Non-being is the teaching of the Divine Current (*divyaugha*). See 57/29-41ab; also 13/56.

131. The MSs of the TS indicate the reading '*ucchedabhāvakāraṇam*' – 'the cause of impermanence'.

132. AS and TS: One with (many) thoughts (*savikalpa*) is (always) troubled (*savikalpas tu badhyate*).

133. TS: bondage (*bandha*) prevails.

134. TS (1/286cd-287): There is no Drop, no Sound, no activity (*cāra*) or anything present in the group of Six Paths. + There is no path of the utterance of Śakti present at the time when the causes are abandoned. There is no state of contemplation of emptiness – neither Śakti nor Śiva.

135. TS: . . . that binds with the fear of transmigratory existence (*saṁsārabhayabandhanī*)

136. Instead of this line the TS reads: Generally, (a person) acts when he is not satisfied.

yan nāsti [k: yatrāsti] tatra santoṣaḥ prāyaḥ [g: prāya] kaścit kariṣyati |

137. TS: . . . by which t**he entire universe is** pervaded.

138. AS and TS: **As long as that is not abandoned,** there is no peace.

139. AS and TS: **Where everything** has been destroyed what hope do those **who believe in liberation** have?

140. Instead of *dharaṇā* – 'concentration', the AS and TS read *kalpanā* – 'thought'.

141. AS: **(The yogi's) vision (*dṛṣṭi*) is extensive everywhere.** It is liberation from all characterization (*sarvalakṣaṇamokṣaṇam*).

TS: **(The yogi's) vision (*dṛṣṭi*) is extensive everywhere.** That is the liberation of those who believe in liberation.

The TS continues with the following passage (1/292cd-314ab). Note that although the AS generally follows the TS more closely that the KuKh, this passage is missing in the AS as it is in the KuKh.

Liberation cannot be taught. Thought based on conjecture and refutation (of others' views) removes knowledge. (Instead) one should abandon ignorance. All the universe is a form (*ākāra*) of that (ignorance); (whereas) that (ignorance) has no form at all. Here (in this case) the wise should generate (*kartavya*) the formless, which is established in Being.

The condition in which there are metaphysical principles (*tattvabhāva*) is called the material one (*bhūtākhya*). It is where creation takes place. Bliss is Brahman's nature (*rūpa*). It never fears. Having known that everything is of the nature of all things there is nothing at all (left) to do. If the condition is that of (phenomenal) being (*asitva*) then there is certainly bondage. The Self binds itself by itself like the insect that makes (its own) cacoon. In the same way the elevated state is the result (of his own) reflections (*bhāvana*). He who is bound in both (the lower and elevated states) should be set free. What is liberation for one who is not bound?

Innate and secondary bonds are based on the sense of duality. They are (not due to any external cause, rather they are) conceived by themselves. Here (in this context) mind is characterized by intention (*saṁkalpa*). O beloved, one should abandon all that is mental and made of speech. Everything that is of the nature of being or non-being is the mind's conception (*saṁkalpa*).

sahajāgantukā bandhā dvaitabhāvenādhiṣṭhitāḥ [k, kh, g: -bhāvamadhiṣṭhitaiḥ] |

One knows nothing at all (of this sort) if a condition of equality (*samatva*) arises wherever the mind (reflects on the distinction between) things that are pure or impure, or (is immersed) in the thoughts of caste or its absence, (or in considerations of) what can be eaten and what should not.

One should first of all abandon all (phenomenally) existing things and be firmly (established) in Non-being (*abhāva*). Having abandoned Non-being. (the yogi) will be 'established in the innate nature' (*svabhāvastha*).

The mind of one who knows (that ultimate reality) is like water on a stone heated by the rays of the sun (that although) not drunk by anybody does not remain there, but located there becomes formless,.

Just as the wind, present everywhere, transports with force the sky and the earth and the great power (of the wind) bursts apart trees and mountains (but) ceases in a moment, so too the mind of one who knows (that ultimate reality).

Just a clouds cover the sky extensively (but) do not cover the earth and cease in a moment, so too the mind of one who has quit (phenomenal existence).

Just as the rain from clouds in a place where there is a pond on raised or low ground is destroyed in a moment in the same way (phenomenal) Being has no (permanent) abode.

Just as having know (something), even if its incomparable, by applying awareness (*cetana*) it is conceived in a moment, (the wise) know the void mind in the same way.

O goddess, just as the loud sound of a conch is heard (clearly but even so) wanes away in a moment, (the wise) know the void mind in the same way.

Having assumed an attitude of detachment from (all) goals (*artha*) in order to be free, (the yogi) should cast that (mind) along with the Cāndrāyaṇa and other such painful (austerities he practices) into the oceanic nature of the Transmental. Not a single thing exists for those, who having grasped (true) detatchment, have cast the (fettered) Self (into the Transmental), (for each single thing) has entered (the transcendental condition) free of reason.

One does not attain liberation by practicing celibacy, austerity, religious observances, cleanliness and the other restrictions. The sole cause here (of liberation) is non-being (*abhāva*).

The darbha grass for the sacrificial fire, mantras, making offerings to the fire, the substance offered in the fire, offerings brought to the place of sacrifice (*praṇīta*), seats of sacred grass, the construction of the path in the course of initiation – (all) this is (just) an aggregate of thought constructs. It is not the cause of awakening.

Non-duality is (a state) free of thought constructs, devoid of the senses and (any) distinguishing (phenomenal) character.

ibid. 1/311cd-314ab.

142. TS: The wise should always make the mind's place in No Mind.

*amane ca [k: amaneśca; kh, g: amane *] manaḥsthānaṁ [kh, g: prabhāva] kartavyaṁ satataṁ budhaiḥ* | 1/315ab

AS and TS (1/315cd) add: Non-existence (*nāstitva*) persists perpetually. One should abandon existence.

nāstitvaṁ [k, g: astitvaṁ] vartate nityaṁ astitvaṁ tu [k: na] parityajet ||

143. TS (1/316): If one is established in non-existence for him that (reality) is not non-existent. There is no liberation, (indeed) it is a great fetter. **One should realise that everything is emptiness (*śūnya*).**

147. TS (1/319-321ab): Completely overcome by the **afflictions of breath control and the like** and by the streams (of thought) of the mind, (whatever) one may do at some other time, what was previously achieved (becomes fruitless). Therefore **having thus known** that that (reality) **moving and immobile** (which is the object of) the senses is, like a jar, subject to destruction (and momentary) like

the glimpse of a lightning flash, everything should be abandoned for the sake of liberation and fix the mind in non-existence.

148. AS: In this way, the yogi knows the nature of living beings everywhere.

NOTES OF THE SANSKRIT TEXT OF CHAPTER FORTY-ONE

1. This chapter corresponds to chapter 21 of the AS. Almost all the verses are found in the second half of chapter 1 of the TS but not in the same order as they appear there. Moreover, there are occasional additions and omissions here with respect to the TS and, to a lesser extent, the AS. The equivalent verses in the TS are as follows: KuKh 41/1-9ab = TS 1/322-328; KuKh 41/14-32ab = TS 1/329-1/349; KuKh 41/32cd-34 = TS 1/438-440cd; KuKh 41/35-39ab = TS 1/451cd-455; KuKh 41/39cd-51 = TS 1/470-484; KuKh 41/52ab-57 = TS 1/444-9; KuKh 41/58-66 = TS 1/271cd-280ab; KuKh 41/67-68ab = TS 1/487cd-488.

NOTES OF THE TRANSLATION OF CHAPTER FORTY-ONE

1. AS and TS: **The mind is always fickle (*cañcala*),** without foundation and beyond the senses.

2. TS (1/327cd): Having abandoned the sense of ‘this is mine, everywhere one should reflect that: `I am not'.

mamatvaṁ tyajya sarvatra nāham asmīti [g: nāntamasmīti] bhāvayet ||

3. AS and TS: attain.

4. The TS (1/330) adds: Desire and aversion, pleasure and pain, detachment and attachment – as long as these are not abandoned how can he make progress?

icchā [g: ?] dveṣaḥ [k, kh: dveṣa; g: ?] sukhaṁ [g: ?] duḥkhaṁ [g: ?] virāgaś ca parigrahaḥ [k: virāgo mānavā tathā; kh: virāgo jñanavā tathā; g: virāgo jñānavā tathā] |
yāvad ete [kh: etain] na mucyeta tāvat tasya kuto gatiḥ ||

5. TS: Dragged back by the goad of ego **fall (back) into the ocean of fettered existence.**

6. TS: Having abandoned all longing he is said to be one who is free of longing.

7. AS and TS (1/337ab): Perceiving oneness (he realizes) ‘I am not, nor is there anybody else’.

nāham asmi na cānyo ‘sti ekatvam anupaśyataḥ |

8. AS and TS (1/338-339ab) read instead of this verse: He who sees (reality) as it truly is (*tattvena*) and is established in the savour of oneness (*samarasarasa*) (perceives) the oneness (*samatva*) in all existing things (viewing) iron, stone and gold as the same. Thus he attains that state of equality and is said to be one who remains (always the) same (*nirvikārin*).

tena tatsamatāṁ [k, g: taṁ samatāṁ; kh: tatsamatā] yāti [k, g: yānti] nirvikārī sa ucyate [g: suducyate] |

9. AS and TS (1/339cd-340ab): He is free of thought constructs, is undefineable, beyond (any) means of knowledge and supreme. Thus there is no means (*karaṇa*) (to attain that reality) which, established in its own essential nature, is its own characterizing mark (*svalakṣana*).

nirvikalpam anirdeśyaṁ [k, kh, g: anirdeśya] pramāṇātītagaḥ [kh: -tītamaḥ] paraḥ ||
tena tatkaraṇaṁ nāsti svarūpasthaṁ [kh: -rūpasthas] svalakṣaṇam [kh: svalakṣaṇaḥ] |

10. TS (1/341ab): The nature of the activity of the condition of one's own essential nature is the imperishable Lord.

svabhāvagatisaṁcārasvabhāvo 'vyaya īśvaraḥ |

11. The TS (1/343ab) introduces this passage with the statement: The (reality) that is established in its own nature always abides by its very nature (in the one reality) that is beautiful.

svarūpasthaṁ [g: ?] svarūpeṇa sadā sthāsyati śobhane [kh: -te] |

The AS and TS (1/343cd) reads this line: He attains the Immobile. Nowehere does the mobile move (him).

niścalaṁ tasya jāyeta na cālyaṁ cālyate kvacit ||

12. TS: 'filled' (*pūrita*).

13. TS (1/347ab): O goddess these bonds are said to be the cause of the fettered state of transmigratory existence.

ete saṁgāḥ smṛtā devi dehināṁ saṁsārabhavakāraṇam |

14. AS and TS (1/348cd-349ab): Having abandoned association with the world and with the scripture, he who is free of all association goes to the supreme abode.

lokasaṅgaṁ parityajya śāstrasaṅgaṁ tathaiva ca ||
*sarvasaṅgavinirmukto [g: -vinir * *?] gacchate padam uttamam [kh: avyayaḥ]* |

The KuKh omits a long passage here from the TS (1/349cd-438) that deals at length with the nature of Ultimate Reality as Non-being (*abhāva*, *nāstikya*) understood to be the innate nature (*svarūpa, svabhāva*) of all things. This is explained in the context of the yogi who is established in the 'innate nature' (*svarūpa*) which is Non-being (*abhāva*).

15. TS (1/439-440): **(The reality) established in the Drop, within Sound,** within motion and present in the group of six paths, within the utterance of Energy, in the time of the abandonment of the causes, and in the state of emptiness, O Śambhu (I have heard about the condition that is) **established in**

Energy and within the Heart and, in particular the one established in the innate nature (*svarūpastha*). All that has been understood.

16. The following passage from the TS (1/442-452ab) has been omitted here:

The wise should know Mātṛkā located in the three Wheels. They are said to be the vowels. These are the sixteen great Flames. That Wheel has sixteen spokes that is energized by the Wind of Fire. O lady of good vows, these (great winds), endowed with power, are located in the calyx.

The form of the flame of an autumn lamp, she has come forth into the Five Voids and again, O goddess, into the End of the Twelve (where she shines) like a blazing sun. That energy, called No Mind (*amanskā*) and Mind Beyond Mind (*manonmanī*), merges there. O mistress of the gods, for the moment the most excellent of adepts abides there he is instantly paralysed (*stobha*). (Then) he (spontaneously) makes many kinds of ritual gestures and (his) speech is of many forms. He recites treatises on Dharma, and all the scriptures beginning with the Vedas at that very moment. Asked, he will tell (you) the past and the future. He flies up into the sky and is the lord of the Vidyādharas.

The twelve spoked (Wheel) (consists of the all the vowels) except (Ṛ Ṝ ḷ Ḷ), the group of (four) 'neuter' (letters). Conjoined with the thirty-two letters, it is said to be the great Wheel. Such are all the Mātṛkās that have come to the three Wheels. The twelve-spoked (Wheel) is in the middle of the Heart. The Sun is located there. The sixteen-spoked (Wheel) is in the palate, where (Kuṇḍalinī) generates nectar. The one consisting of all the (consonant) letters, which has thirty-two petals is in the head.

One should know that generation (*udbhava*) takes place in the Wheel of the heart. Disjunction (*viśleṣa*) (occurs in the palate) in the Wheel where piercing takes place. Those who know the Self should know that merger (takes place) in the Wheel of the head.

17. TS: **(Kuṇḍalinī) is grasped (*grahaṇa*) in the navel centre.** It is present in the throat of all living beings.

18. The TS continues:

I will tell (you) in accord with reality about the Lords of the Worlds and how they pervade their own (spheres of influence) by (the power of) their authority over the letters. So, O mistress of the gods, listen (as I tell you about their) pervasive (influence) and activity (*saṁcāra*) in relation to the three principles, namely, the Self, Knowledge and Śiva and (how the) causes are abandoned in each letter. Yogīnīs pervade the Wheels called Fire, Moon and Sun mentioned previously. Listen how they are individually.

The Yoginīs in the Wheel of Fire are said to be Jvalinī, Jvālinī, Jvālā, Tejasā, Tejavarcasā, Tejorminyā, Tejā, Tejovatyā, Tamopahā and Tejonidhi. Born from the body of Kālāgnirudra, they destroy the entire universe.

Now listen (as I tell you about) the Yoginīs who are born from the Wheel of the Sun. Sūryā, Sūryavatā, Kāntā, Svadhā, Svasti, and Sudhā, Sumanā, Unmanā, Kāntā, as well as Śāśvatī, Saṁvartā, and Saṁharī are the Yoginīs in the Wheel of the Sun.

They should be know to be in the second enclosure. I will (now) tell you (about the ones) in the third. Śaśinī, Śāśvatī, Śāntā, Sevanī, Śaśiprabhā, Śītā, Śītavahā, Kāntā Pṛthvī and Priyakārikā, Pṛthivī, Pārthivī, Prītā, Kṣobhaṇī, Kṣubhitā, and Akṣayā – (these) are said to be in the Wheel of the Moon. They establish emanation.

Established on the plane of the Lords of the Worlds, they should be seen in each Wheel. Unfailing (*acyutā*) they sport with the yogis of the Lord of the Worlds.

O fair lady, the Rudras of Rudraśakti, along with the yogis are without number (even in the) separate categories. Divided in (those of) the Moon and Sun, there are billions of millions of each type. They bring about creation and persistence and all play there (together). I have (thus) explained in brief the (extent) of their Kaulikī pervasive (presence), as each one is said to be in each Wheel.

Note, by the way, that in the TS there is no reference to a 'Kulāgama'.

The TS adds: Fair lady, (it should not be give) to those who have these great defects.

24. TS adds: And that descent (of power) is in particular said to be of two kinds. Further ahead I will describe how it is best, middling and inferior. When the disciple has been tested in front of the teacher, deity and the fire, he should be told the Rules that are enjoined in the scripture. Then, having consecrated (him, the teacher) should give (him) the teaching.

30. The TS (1/450ab) says instead: The twelve-spoked (Wheel) is in the middle of the Heart. The Sun is located there.

dvādaśāraṁ hṛdi madhye tatra (kh, g: tantra) śūryo (k: śūnyo) vyavasthitaḥ |

The rest of this passage which completes the exposition reads in the TS (1/450cd-451):

> The one consisting of all the (consonant) letters, which has thirty-two petals, is in the head. One should know that generation (*udbhava*) takes place in the Wheel of the heart. Disjunction (*viśleṣa*) (occurs in between the eyebrows) in the Wheel where piercing takes place. Those who know the Self should know that merger (takes place) in the Wheel of the head.

31. This passage begins in the TS (1/268cd-269) as follows:

> One who is established in Rudra knows the scripture as well as Mudrās and mantras of many kinds. The adept sings the scriptures, even those he has not heard. Above that, O Great Goddess, is the plane called emission (*visarga*).

The TS (1/270) reads this verse as: O goddess, if he is established in emission he hears the Word. He experiences a tactile sensation, cold like a Himalayan peak.

32. The equivalent of verses 60 and 61 read in the TS (1/271-273ab):

Then, O goddess, the Abode of Śakti becomes one with Sādākhya. O fair lady, the Transmental in relation to the objects of sense is the state of (the reality) established in Śakti. Without a doubt, (he) attains the yogic powers to become small at will and the rest. O beautiful lady, if that merger becomes stable there itself, then he quickly flies up. This is true without a doubt.

33. TS (1/273cd-276ab): One should know that the condition that is 'established in the cavity' (*randhrastha*) is omnipresent and what is beyond it is pervasive. **Just as the space within a jar appears to be divided, similarly the pervasive one appears to be divided up (*vicchinna*) by the body.** O goddess, when the jar is broken (the space) becomes one and the essential nature of inner and outer (space) appears to be just one. The elemental soul (*bhūtātman*) free of fetters manifests in that very same way.

34. TS (1/278-280ab): Just as a lamp in a jar illumines (just) one place, in the same way the Self present in the subtle body (*liṅgastha*) is adorned with the activity of (only that) mind. O goddess, just as when the jar is broken (the lamp) illumines everywhere, in the same way when the mind is free of the fetters it becomes pervasive. Thus, O goddess, mistress of the gods, I have explained the condition of pervasion (*vyāpti*) to you.

yathā dīpo ghaṭastho hi ekadeśaprakāśakaḥ |
tathā cātmā tu liṅgastho [kh, g: -thā] manavyāpārapeśalaḥ [k: -pāraṁpeśataḥ] ||

tathā pāśair mano mukto vyāpako bhavate priye ||
evaṁ [kh: eva] vyāptir mayā [k, g: vyāpti-] khyātā tava devi sureśvari [kh: suresvari] |

The TS concludes:

(First) these (liberated souls) possess the pervasion of the Self and, beyond that, the pervasion of Śiva. (Although) they are free of all limiting adjuncts, due to the residual state (*śeṣabhāva*) of the fetters (that thus continue to exist) they have not know the supreme principle and so Śiva's state is (merely) imagined by them. These Śaivas are not teachers of the Self. They do not reach Śiva's plane. They reach the condition of the Self, (their) soul attached (*rañjita*) to the principle of the Self. Those who worship (deities) with forms having imagined (their) deities (to be such), (merely) attain their plane. They are not really liberated. Therefore, having abandoning everything one should worship (the reality which is) 'established in the innate nature' (*svabhāvastha*). (280cd-284)

–वृक्षेस्तु 69. All MSs: संयुता 70. घ्: –घदातारा; all other MSs: –प्रदातारा

71. SamP and All MSs: –शक्ति. As noted earlier (note to 3/119d) the form त्रिष्कोण– commonly replaces the regular त्रिकोण– in MSs of this text. The regular form in this case would upset the metre.

72. क्: संप्रवाह्य; घ्, छ्: संयुताह्ये; all other MSs: संयुवाह्य; SamP: संयुतावाह्य

73. घ्: दक्षासां; all other MSs: दक्षाशां

74. परमामृत– would be correct, but does not fit the metre.

75. क्: दिक्शैलगिर्यं; SamP and all other MSs: दिक्शैलगिर्य

76. SamP: ग्, छ्, ज्, झ्: रतिमुखनिलयं

77. ख्, झ्: दक्ष; The ending has been dropped to fit the metre.

78. The position of the components of this compound has been reversed for the metre. SamP reads: पूर्णकौलीशं

79. All MSs: –विदितं This emendation is supported by the SamP.

80. All MSs: –मेतं 81. See note to KuKh 1/1c.

88. क्: –देव्यस्–; ख्, झ्: –देव्या–; all other MSs: –देव्यो–; SamP: –देव्या–. SamP
and All MSs: + च. I take देव्याः to be the nominative plural of the deviant form देव्या
(for देवी) which is well attested in this text. The following compound is one
syllable too long. 89. ज्: त्रिक्त्रिक्–; All other MSs: त्रिकत्रिक–
90. ख्, ज्: त्रिदशे 91. DS, IC.

92. क्: साधकै; ग्: साधके:; SamP and all other MSs: साधकः

101. IC. 102. SamP and All MSs: वितरत–. I have made
this emendation assuming that वितरित– is a deviant form equivalent to वितीर्ण–.
103. All MSs: रस्त्र– 104. ग्: खंभाश. I take the noun stem खम्भ to be
a vernacular form of स्तम्भ (M) rather than emend. Note also the irregular concord
with the following numeral which is neuter.
105. घ्, छ्: कोणै: विदिशकुलगतं. The locative कोणेषु is meant.

NOTES OF THE TRANSLATION OF CHAPTER FORTY-TWO

1. This chapter begins with the third and last version of the Root *Sūtra* (*mūlasūtra*) found in the KuKh. The other two are in chapters 26 and 38. Mukundarāja comments on the version in chapter 26 (see, note to 26/2). This version of the Root *Sūtra* contains little not found in the other two versions to which the reader is referred for an explanation. After the Root *Sūtra*, two other *sūtras* follow. They are the *Sūtra* of Action (*kriyāsūtra*) and the *Sūtra* of Emanation (*sṛṣṭikramasūtra*). Mukundarāja's brief commentary on these two *sūtra*s is supplied in the notes.

2. Instead of 'and fills the universe (*pūrita*)' CMSS says: 'Kāmarūpa is in the front of that (Yoni).'

3. The *Ciñcinīmatasārasamuccaya* begins with a verse praising Śrīnātha (see note 22 of chapter 46) who descends into the world onto the Island of the Moon which is in the midst of the Ocean of Consciousness in the End of the Twelve. This is followed by one dedicated to the goddess and a third which extolls the essential practice the CMSS teaches, which is participation in her passionate and sacred love sport with the god. Here they are:

I salute the venerable Kukārā of the tradition of the Western Tradition who has emerged from the midst of that (Island of the Moon), piercing through the great Kula, in the worlds within the sky of the divine firmament, devouring (all things from) within the cavity of the circle of the lower worlds.

Salutations to the wealth of touch (*sparśalakṣmī*), the supreme (goddess) who, contemplated by the Wheel of Passion (*raticakra*), sports (observing) the Vow of perpetual intent on the abode of the crevice in which time and timelessness have been eradicated. (The Vow) is the manifestation of self-attainment (that takes place when) the abode divided by the diversity of oneness and duality has been abandoned. (The Vow) is the manifestation of one's own (innate) vibration (*svaghūrma*), (that takes place when) the supreme nectar of the juice of each state of being has been drunk.

The verse that follows is this, the opening verse of the Root *Sūtra*. In the context in which it is framed in the CMSS, the Yoni the *sūtra* describes is the 'the abode of the crevice' to which one must pay constant attention and in which one experiences 'the wealth of touch' which is the Supreme Goddess.

4. Cf. 2/10 and 26/4 and notes.

5. Cf. 42/13 below.

6. Cf. 38/9.

7. CMSS (1/5-6ab): **In this way, everything is pervaded by the three divisions of Rudra's energy who is the mother of persistence and destruction.** Blissful with that (*tanmada*), the primordial and free God of the gods who is Kula and Akula resides in the centre of that. His **Command is the Drop (*bindubhūtā*). She is awakened consciousness who removes the fear of the fettered and bestows accomplishment (*siddhi*).**

8. CMSS: (The Command is the goddess) Nityaklinnā (Perpetually Wet) who, free and desirous of herself (*svaraktā*), bestows perpetual bliss infused with the joy of phenomenal existence.

In the middle of that (Drop) is the Divine Liṅga, which is eternal bliss that generates supreme bliss, (its) form the Drop and nature the Void (*kharūpa*). Churned by both, it is divided by the six parts. I salute the venerable (goddess) called Kubjikā whose beautiful body is aroused and makes love there (*kurvantī tatra kāmaṁ*).

I salute the one whose name is Nameless, who contemplates the phenomenal being of the Wheel of the Earth. Salutations to the goddess of bliss, salutations to you whose form is the Yoni.

9. The Root *Sūtra* focuses on the central Triangle as it is in itself and as the source of the hexagram. It presents the Triangle in terms of the energies, including the sonic ones, that interact within it. It is the inner Triangle, the Yoni in the End of the Twelve. This *Sūtra* is concerned with the outer *maṇḍala* of the Śrīkrama.

10. The Siddhas who sit in the shade of these trees attain the repose (*viśrānti, nirvāṇa*) of absorption in the Supreme Principle by the grace of the goddess who resides in it and whose energy extends around it as its shade.

11. Kula is the enclosure of the Triangle and Akula is the Point. The one Energy sustains the hexagram which is here called the 'group of six'

12. There are three mountains, namely, Śrīśaila, Māhendra and Kailāsa. These belong to an earlier sacred geography that is integrated here into the later one centred on the sacred seats (see intro. vol. 1, p. 563), to which they are made to correspond.

13. Mukundarāja explains in his *Saṁvartārthaprakāśa*:

There the external **group of six** consists of the triple energy in the triangle, namely, (the three goddesses) Jyeṣṭhā, Vāmā and Raudrī, (along with) Kubjikā in the middle and Akula and Kula, the letters Ha and Sa. The hexagram is outside that. The six Ḍākinīs are in the six corners. The syllable OṀ is in the middle of the triangle. It is also read as the syllable KLĪṀ. **In front of that**, that is, in the corner in the forepart of the triangle, is Kāmarūpa. The four are called 'sacred seats'. The sacred seat of Jālandhara is in the right corner. The letter 'A' has been erased from (the beginning of) the word '*amṛta*' (in the compound *paramamṛtamayaṁ*). '**Supreme nectar**' is (the syllable) VŪṀ. '**Full**' is Pūrṇagiri in the left corner. In (this) the northern quarter there is mountain. 'Mountains' (include) the forests with mountains, groves and so on. **'The abode of the joy of sex'** is the place where the play of (spiritual) passion takes place. ((**Mount) Māhendra of worldly experience (*bhoga*)** is on the right of the Yantra. It is fit for worldly enjoyment as is (the god) Māhendra.

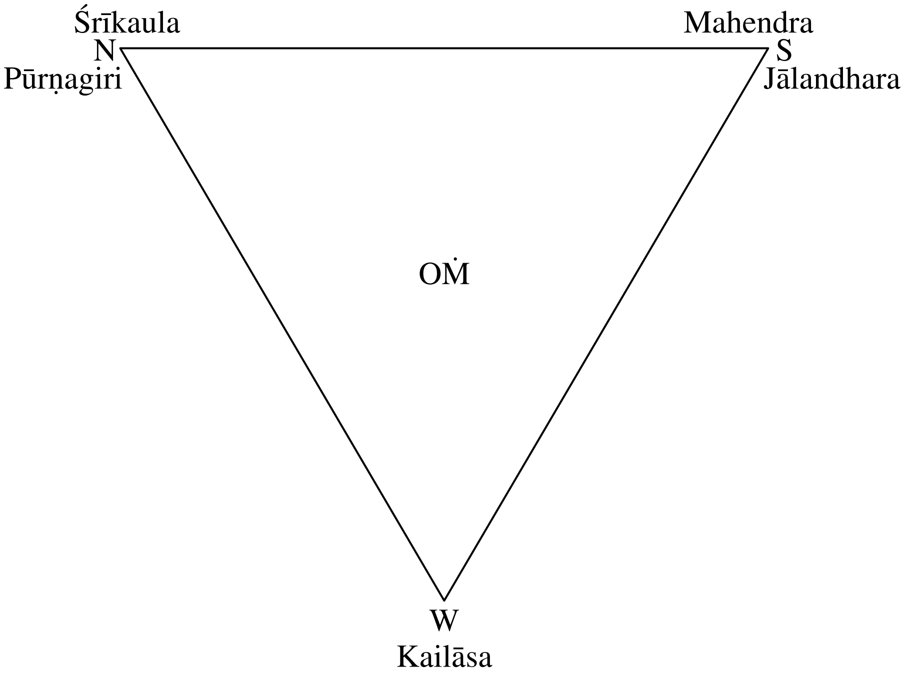
Diagram 8. The Sacred Mountains of the Triangle



14. These mountains are the peaks of Meru. Mahendra is the southern peak. Śrīśaila is the northern peak and Kailāsa is the western one. Thus the texts frequently repeat that Kailāsa is to the west of Meru or, to be more precise, is the western peak of Meru. In the Age of Stife this is the last (*paścima*) Kaula tradition that comes from the 'west' of Meru, that is, from Kailāsa where Kāmarūpa is located. Thus the tradition of the Kubjikā Tantras is called the *'Kādibheda'*. It is that variety (*bheda*) of the tradition that comes from Meru which originates in Kāmarūpa, the sacred seat whose name begins with 'Kā'. Thus Kailāsa if full of all the teachings. Moreover, Kailāsa is 'in front' where emanation issues forth and so is also full of that.

15. After describing the Triangle with its four sacred seats and three mountains, the text refers to the downward facing triangle of the hexagram. The corners of this triangle are at the 'end of' the left, the right and the front corners of

the Triangle within the hexagram. They are: 1) End of the left: Vimalapañcaka 2) Front: the Four Siddhas of the sacred seats 3) End of the right: the Pentad. The six corners of the hexagram house six Yogis and six corresponding energies (*kalā*).

16. SaṁP: The Full Kailāsa is in the front part (of the Triangle). The **three worlds** are the three (forms of) Māyā. Along with (the mountain) called the Kailāsa of Yoga, this is the group of four is called O – JĀ – PŪ – KĀ. The 'pentad' there is the pentad in the Tantra that denotes the families of deities (in a fixed) number. '**In the end of the left'** corner, that is outside (the left corner of the triangle where the left corner of the hexagram is located) are the seed-syllables that are **Pure energy**, which has these names. There are four Siddhas **in the front** row who should be known to be such as in the aforementioned way. This is a description of the extraction (of the mantras and principles) within the parts (*prakāra*) of Kubjikā's *yantra*. They are enumerated in the *Manthānabhairavatantra* in the mantra of the six troupes of yogis. **The group of six made of energies (*kalā*)** along with (its) Peak (syllables) is **within the six parts**, that is, in the outer hexagram. It is said that **there is another Pentad. The Supreme Abode** is the Peak syllable (of each) mantra.

SaṁP: **At the beginning of that** *yantra*, that is, in front of it is the Lord Ekapuṣpa – **One Flower**. **The lower (immanent) Kula** of that is the Peak syllable (*kūṭa*) to which that Seed-syllable has been added (*kūṭita*) outside Olinātha (the Lord of the Tradition). In the three places of the Triangle there are the **triple triple divisions**, that is, the sacred seats and the goddesses of the sacred seats that have been mentioned (previously). **The glorious power that is associated (with them)** within it is the Peak syllable of that mantra.

Brahmāṇī and the other (Mothers) are on the group of eight petals (as are) Asitāṅga (Bhairava), adepts, (spiritual) sons, Lords and the rest. **After that it is surrounded** (by the seed-syllables) VMLVRYĪṀ AMLVRYŪṀ and the rest (*ucchāṁvācālā kūṭasahitā* ?). The deposition of the six groups, the faces and the rest is **within that.** The group of six limbs, that is, the heart and the rest are in the six corners (of the hexagram). There are twenty-one *maṇḍalas* outside those Peak syllables. One should search in the *Manthānabhairavatantra* (to find out about them).

18. SaṁP: There are eight corners (in the octagon) outside the three girdles. Eight skulls are **spread out** there in the **directions.** They are the most excellent weapons and are (well) adorned. There are eight Peak syllables along with (as many) syllables PHAṬ. This is where the aforementioned two groups of four deities are arranged (*paṭhita*). The **pillar (*khambhā*)** is the void (*khaṁ*) that shines (*bhāti*). The **four** (pillars) are in the enclosure (*bhūpura*) (of the *maṇḍala*) in the secondary directions along with the deities of the first group of four and their Peak (seed-syllables). The deities of the doors are in the doors. One should fashion a *yantra* which **contains the Kula** for the rite (*yajana*). Thus the *Śrīkramasūtra* has been brought down (to earth).

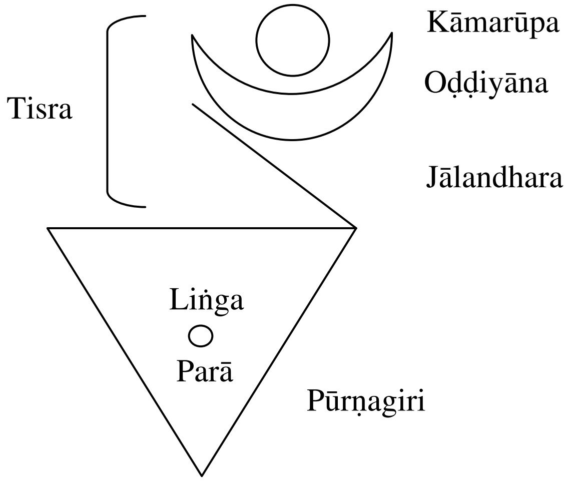
19. The goddess says below (42/14ab) that she will utter the *sūtra*. One would expect the *sūtra* to begin from there. Thus it appears that the following verses 12 and 13 are misplaced. They read like a summary couched in the usual cryptic style of what follows. Once again we contemplate the Triangle and the seats within it. This time they are presented as markers of the stages of emanation that originates and unfolds in transcendental Emptiness.

20. She is Rudraśakti. See above, 42/5.

21. The sequence here is not quite the same as the one presented in the following verses although both outline the emergence of the seats within the 'current of Kula', the unfolding energy of the Void. Externally it is marked by stages in drawing the syllable AIṀ which is the Yoni, the Supreme Abode of the goddess. We start from the top of the syllable by drawing the Point. This is the Void beyond dimension represented by Kāmarūpa. In the following account this is generated from Oḍḍiyāna, which is identified with Bhairava. Here Oḍḍiyāna is the energy of the New Moon, the semi-circle below the Point. This is followed by Jālandhara, which is the slanting line that represents the End of Sound. This the end of the audible sound of AIṀ and its sonic energies, that is, the Transmental. This mediates the formation of Pūrṇagiri, the Light of the Full Moon which, in this case is the triangular body of the syllable 'on the path below' Jālandhara. Filled with all the energies of the letters, it is the sacred seat of mantra (cf. 42/22cd-23ab). The process is complete with the experience of Tisra on the 'forehead' (cf. 42/5). This is the series from the Point to the triangular body of AIṀ, its transcendental aspect experienced collectively.

Diagram 10. **The Sacred Seats of Vāgbhava**

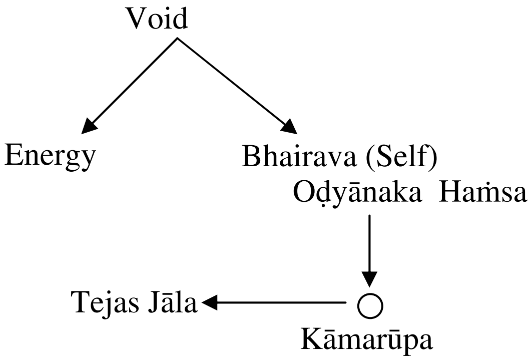


22. This *sūtra*, like the previous one, is quoted in full and glossed in the SamP.

23. Mukundarājā understands the process of emanation to be marked by the phases in the ritual. The composite deity – male and female – emerges out of transcendental emptiness into manifest form as the seed-syllables projected into the *maṇḍala*. This marks the inner process described in the text that presents the formation of the Yoni within the Emptiness of transcendental reality as the emergence of aspects of Emptiness. First comes the goddess, the unmanifest energy of the Void who heralds the unmanifest Bhairava, the god. Originally and fundamentally both unmanifest Emptiness, they arise within the Yoni, the matrix of Emptiness. Bhairava is the Self which is the inner breathing of the Void. He is Odyāṇaka, the first seat. He generates the Point (*bindu*), which is Kāmarūpa. The intense energy that radiates from the Point is Jālandhara and the Light, Pūrṇagiri. In this way there are four aspects of Voidness – the Unmanifest, the dimensionless Point, radiant energy and light. This is the Yoni with its sacred seats.

24. We have already seen that the name of this sacred seat is commonly understood to mean for didactic purposes 'one who flies up'. We may schematically illustrate the progression outined here as follows:

Diagram 11. The Emission of Emptiness



25. SamP: Kāmarūpa is located where (the Drop) that is released from Odyāna (falls). The Drop that is in the middle of that *yantra* falls in the front corner.

odyānamukto [odivānamuktaṁ] yatra binduḥ [*] tatra kāmarūpam [-paḥ]* । *tadyantramadhye binduḥ koṇāgrataḥ patitaḥ* ।

SaṁP: **The form of Śakti comes first**. The observance (*upāsanā*) after taking initiation is (initially) Śākta. (The goddess) is **unmanifest**. In the state in which it is not possible to know (in a finite way), she is unmanifest. Then she is Kubjā and appears in the *yantra* consisting of the triangle and the rest, along with (her) attendents and Kubjeśvara and so is **manifest**. In the same way, Bhairava who is her consort is **unmanifest** and is the essential nature of the Self. The bliss of contemplation in the state in which (he is) worshipped arises as awakened consciousness.

The letter Kha is in the Point in the centre of the Triangle, then the letter Ha is in the **Void**. The form of the **bird** is Sa. The **breath** is Ya. Odyāna is the letter AU. The mantra KHASAYA-AUM (is formed in this way). Having know that or the seed-syllable *Prasāda* (HSAUḤ) there, meditate (on it).

SamP: ***prathamaṁ*** *prathamataḥ* ***śaktakaṁ rūpam*** | *dīkṣāgrahaṇānantaraṁ tadupāsanā śaktakam* | *avyaktā etādṛśī sā iti vijñātum aśakte 'vasthāyāṁ cāvyaktā sā* | *tatas trikoṇādiyantre saparivārā virājitā kubjeśvarasahitā kubjā iti vyaktā* | *tathā bhairavaḥ tatpatir apy avyaktaḥ* | *ātmasvarūpaḥ* | *tadupāsanāvasthāyāṁ [-vaśyaṁ] bhāvanānanda iti bodho jāyate* | *trikoṇamadhye bindau khakāras tataḥ gagane [gagaṇe] hakāraḥ* | *pātaṁgarūpaḥ [mā-] saḥ* | *vāyur yaḥ* | *odyāna aukāraḥ* | *tena khahasaya-aum iti mantraḥ* | *athavā prāsādabījaḥ* | *tatra jñātaṁ dhyāyet* |

26. SaṁP: (Next comes) the contemplation (*cintana*) of the radiant energy that comes from the middle of that Drop. The Yoni (*bhaga*) is the Triangle. One should contemplate the two Peak syllables beginning with the letters Sa and Ha (i.e. SHKṢMLVRYŪṀ and HSKṢMLVRYĪṀ). The contemplation within the body from the (inner) spiritual point of view is said to be everything.

tadbindumadhyāt teja-udbhavacintanam | ***bhagas*** *trikoṇam [-koṇaḥ]* | *sakārahakārādinavākṣarakūṭadvayaṁ bhāvayet* | *adhyātmapakṣe dehe vicintanaṁ sarvam uktam* |

27. SamP: **The light emitted by the radiant energy** is in the northern part of the Kula, that is on the mountain in the form of Kubjā's *yantra*.

SamP: ***tejatyajitabhāsā*** *yā sā kulottare kubjāyantrākāre parvate*

Mukundarājā understands the word '*kula*' here to mean 'mountain'

28. Just as the emergent aspects of Emptiness mark the inner phases of emanation, they also occasion the phases in the development of the sacred knowledge transmitted from the sacred seats. In this perspective the sacred seats are the repositories of the knowledge contained in the scriptures. These are classified into four groups – *pīṭha* – Maṇḍala, Vidyā, Mantra and Mudrā (see Dyczkowski 1987: 104 ff.), as their 'secret names' they are equated here with the sacred seats of the Yoni.

29. SaṁP: All the secret names are those mentioned in the *Manthānabhairavatantra*. While Kubjikā, that is, Mahantārikā was sporting with Śiva the host of gods where created on one mountain after another.

30. Māyāpīṭha is the Maṇḍalapīṭha. See note to 3/55cd-56ab.

31. (Knowledge of) reality arises **from the Unmanifest,** that is, from attending to the Formless (*nirākāropāsana*).

SamP: ***avyaktāt*** *nirākāropāsanāt [-nas] tattvodaya ity arthaḥ* |

32. SaṁP: The **Solar Principle** is in the image (*bimba*) of the Circle of the Sun (*sūryamaṇḍala*). Kṛttikā and the other (constellations) originate from a ray of the sun. Then the Kṛttikā is born again from the sun's ray and so on (year after year).* Kubjā's Cave is in the Seat of Knowledge which is in the south. The arising of knowledge from the abode of the Sacred Seat of Knowledge of radiant energy is the fruit. The series of seats is the series of the gods that are a part of it, that is, the aggregate of knowledge.

* The moon shines by the light of the sun as do the constellations associated with the moon. In the course of the yearly solar cycle, the constellations close to the moon change one after another. The first are the pleiads, the Kṛttikās. This constellation of six stars is sometimes represented as a flame or a kind of razor or knife, both images of Kuṇḍalinī. The yearly emergence of Kṛttikā symbolizes the beginning of the cycle of creation that starts with emergence of Kuṇḍalinī.

33. The *Siddhakhaṇḍa* refers to the same set of identifications in the following passage:

(The first one is called) the seat of Yoga because it unites (*saṁyogāt*). It is the Heart of the goddess (*bhagavatī*). It is pure and (Kuṇḍalinī consists of) three and a half measure. In the middle of that is the divine Peak syllable Ḍa Ra La Ka Sa Ha Ya which is the seat of the syllable OṀ of the Mothers. Māyā, which is called Jālandhara, is the descent of the Vidyā of the sacred seats. That mantra is in Pūrṇagirya which is the abode of Śiva with (his) energies and, filled (with that) it is the treasury of mantra. The sacred seat of Gesture is (AIṀ) the Lord of the Elephants formed in the pure Cave of the Moon in Kāmarūpa.

Then the SKh goes on to describe Trisrota which is Merupīṭha in the Point above, at the summit of the syllable AIṀ. In other representations of the Yoni in this perspective, Mudrāpīṭha, which is associated with the Kubjikā school, is in the centre where Kramamudrā, that is, the Command, is located. See above note to 3/57.

35. These code words consist of two units. The first is KU which is a common abbreviation of the Kubjikā's name (see note to 16/5) who is commonly referred to as the goddess of the syllable KU (Kukārā) (eg. below 42/51). Similarly, the second syllable of the code name is formed from the first syllable of the specific goddess to which it refers. For example KUŚĀ is Kubjikā – Śākinī, that is, Kubjikā as Śākinī. Thus the name of each goddess indicates that she is a form of Kubjikā.

This set of eight is the first of component of the Octad of Kula (*kulāṣṭaka*), the other two follow. The Eight Kulas are emanations or aspects of the Eight Mothers. Their mantras are recorded above in chapter sixteen (3-12). The abbreviations listed here appear at the beginning of each of these mantras. They refer to the Yoginī who resides in the House of the Mother of that mantra. Each mantra refers to the location of each House and the low-caste woman who embodies the Mother and Yoginī of that House. In chapter sixteen these eight women are identified with the Mothers (see above, 16/3 ff. 16/14 ff and notes). Here two parallel sets of Yoginīs are added to them. One is the group of outer Yoginīs who are aspects of Kubjikā; the other, the inner Yoginīs.

14. Table of Mothers, Yoginīs and the Octad of Kula

Mother*	House	Low-caste Woman	Outer Yoginī	Inner Yoginī

Mahālakṣmī	Devakoṭa	Kauśikī / Antyajā	Maṅgalā	Vyomajā

* See 16/13-15, the second entries, which are the variants of the names of the low-caste woman, are from there.

36. This is the second version of the Octad of Kula, called the Group of Eight Accomplishments (*siddhyaṣṭaka*) (16/13-15). It consists of the manifestations of the eight Mothers as low caste women, who are the eight forms of the goddess Kubjikā that reside in the Eight Houses (*gṛhāṣṭaka*). Unlike the previous set of eight, this and the following one are commonly found in other Kaula schools and those associated with the Bhairava Tantras.

For the inner, 'transcendental' nature of these eight aspects of the Mothers see above, 16/13-15. The variants in the names and other details between the presentation here and in 16/13-15 have been noted there in the notes and the table here.

37. We find a similar set of eight Yoginīs in YKh (1) where they are, as here, expressly equated with the eight Mothers of the Octad of Kula and referred to as Samayās. There they are called the group of Eight Yoginīs (*yoginyaṣṭaka*) of the Octad of Kula. This set of eight recurs two or three times in YKh (1). One wonders why the same eight do not appear here in the KuKh. In one place the eight gestures (*mudrāṣṭaka*) that should be made when worshipping them is listed and the mantras (YKh (1) 4/97-99). Knowledge of these two is essential to protect the Kaula practicioner. If he does not know them the Yoginīs will seek out his moral defects and those in his practice (*chidra*) that are the weak points through which they can enter him and afflict him (*mudrāmantravihīnānāṁ chidram icchanti sādhane* ibid. 4/99cd). When worshipped they all bestow boons but if they are not, they give rise to obstacles (*pūjitā varadāḥ sarvā vighnadāś*

cāprapūjitāḥ ibid. 4/85cd). The text warns that if they are worshipped without the appropriate gesture and mantra or out of order (*akrama*), the one who worships them will be afflicted by fear and disease (*akramaṁ vartate yasya tasya rogabhayaṅkaram* ibid. 4/115cd) Each has power over a particular sphere of action in which she can cause harm or assist. These are represented by the eight parts of a throne (*siṁhāsana*) that should be offered to them (ibid. 4/100cd-101ab). These are listed in the last column on the right of the following table.

Although they are equated with the eight Mothers, they are not always treated as single Yoginīs. Each Yoginī can replicate into innumerable Yoginīs. As they are all essentially the same Yoginī, the text refers to each one both in the singular and the plural. Analogously, the same holds good for each Mother. Thus although just eight they live in countless places in the outside world and within the body. Like the drops in the sea, they are innumerable. By worshipping them one worships the Śrīkrama from which they are born. Each of the types may also be worshipped on particular occasions (ibid. 4/46-85). These are listed in column three.

15. Table of the Group of Eight Samayā

Yoginī	Mudrāṣṭaka	Occasion and Fruits	The Throne
Pīṭhajā	Siṁha	In the sacred seats	Ego
Kṣetrajā	Triśikhā	During union (*melāpa*)	Mind
Mantrajā	Triśūla	Time of victory	Intellect
Jñānajā	Vaktriṇī	Good actions	Delusion
Kulajā	Piṅgalā	Nigraha	Deviousness (*kauṭilya*)
Sahajā	Madhukuṁciṇī	Battles	Deceitfulness (*dambhaka*)
Samayajā	Nāma		Great Delusion
Kramajā	Yoni	All works	Death

In the following passage YKh (1) presents the eight Samayās (*samayāṣṭaka*) in more detail.

They all bear great signs (of their excellence) and each one is the leader of countless millions (of Yoginīs). In their midst is (the one Yoginī) who, born from the Krama – Kramajā – is all-pervasive and omnipresent. Those who are in a sacred seat and are worshipped in the wheels of the sacred seats bestow beautiful boons.

(Now) I will tell you about the other group of seven. (each of which) bestows boons in (her own) place. The Pīṭhajās are in the middle of the sacred seats. The Kṣetrajā are said to be in (every) gathering (*melāpa*). Mantrajās are auspicious and free of obstacles in the course of practicing (*anuṣṭhāna*) mantras.

Yogajās are for nourishment. Sahajās are auspicious in the (practice of the) Rule. Kulajās are to be worshipped during rites of chastisement (_nigraha_). (These) seven Samayajās are auspicious. Kramajās worshipped in the seven places (of the others) give the fruit (of the worship of the others). One should know that these are the eight Samayās born from the divine tradition (_santāna_). They have come down into the (world of) mortals and are, in accord with the convention, each separate. Thus, born of the Krama and very powerful, they should be worshipped at all times.

She who resides in the middle of the Wheel of the Foundation, between the anus and the genitals and, ever active (_sadoditā_), is born of Kula is Pīṭhajā.

The eighth Kula Yoginī who is mounted on the path of the Eight Wheels and resides on the path of Suṣumṇā is said to be Kṣetrajā.

The one who is mounted on the seat of Kuṇḍalī and wanders in the ten directions fulfilling the command of mantra, fierce and, endowed there with the Command, resides in the _Saṁvartāmaṇḍala_, is said to be Mantrajā.

She who is blissful with innate bliss and moves on her own path mounted on the Path of the Void (_ākāśa_) is said to be Sahajā.

She who abides with a beautiful awareness in the middle of the Stick of the Egg of Brahmā and is on the path that is both supreme and inferior is Kulajā in the Kula tradition.

She whose form is the foundation of Koṅkaṇa and, in the middle of Padmapīṭha, is intent on the practice of Yoga is Sahajā in the tradition (*anvaya*).

Samayā is at the end of the Equal One and she moves within the essential nature of Śiva's power. She who contemplate all things as Śiva is the Mother (*avvā*) Samayā.

She who is mounted on the path of the seat of Māyā and moves within the sky of consciousness within the supreme abode at the end of the Transmental is called Kramajā.

This is said to be the Octad of Kula (*kulāṣṭaka*) which is the source of the eight times eight (Yoginīs). It should be known by the best of adepts who desire great accomplishments. O Śambhu, it is both external and internal and its mark is within one's own body (*ātmaśarīra*). Each one of them should to be worshipped separately in their own place.

38. We find a very similar code in the CMSS. The unit 'KAHĀ' is the same, however there are only eight 'code words' (cf. also above 16/3ff). As here, each of the eight members of this 'eighfold convention' (*aṣṭasaṁketa*), corresponds to a Yoginī. They are: 1) PAKAHĀ 2) BHAKAHĀ 3) ĀKAHĀ 4) GUKAHĀ 5) ŚAKAHĀ 6) MAṀKAHĀ 7) NĀKAHĀ and 8) CUṀKAHĀ.

The CMSS explains these eight units as follows:

O beloved, PAKAHĀ is the supreme root (*paramūla*) which is the dawning of the foundation of all (things). It is the house of a Kalyapālī once the inner Mālinī abides there.

BHAKAHĀ is the root of the Yoni (*bhagamūla*) once you (O goddess) have touched the auspicious Krama. It is the house of Rajakī once the inner Mālinī has entered it and abides (there).

ĀKAHĀ is the foundation of the (place of) birth (*janmādhāra*), the abode (*āyāna*) of all the principles of existence. It is the most excellent house of Mlecchī once the inner Mālinī abides (there).

One should know that GUKAHĀ is hidden (*gupta*). She is Dhīvarī, the foundation of the (place of) birth (*janmādhāra*). The house is the supreme Nirvāṇa once the inner Mālinī abides (there).

SAKAHĀ is the universal convention (*sarvasaṁketa*), the supreme heart of the cremation ground (*śmaśāna*). Meetings (*saṁgama*) with the Yoginīs take place there once the inner Mālinī abides (there).

MAṀKAHĀ, O goddess, is auspiciousness (*maṅgala*). It is the pit of the throat, which is the crossroads. Hunger and thirst are eliminated (here) once the inner Mālinī abides (there).

NĀKAHĀ is the solitary tree, which is said to be the tip of the nose (*nāsāgra*). Once the inner Mālinī abides (there), it is entry into the joy of repose.

CUṀKAHĀ. O goddess, is the kiss (*cuṁbaka*). It is the End of the Twelve and what is above it. And once the inner Mālinī abides (there), she is the enjoyer of the Kumārī Kula.

39. There are six groups here of 4-4-5-3-4-6 units making twenty-six. It appears that this is a Krama, the constituents of which are denoted by these abbreviations.

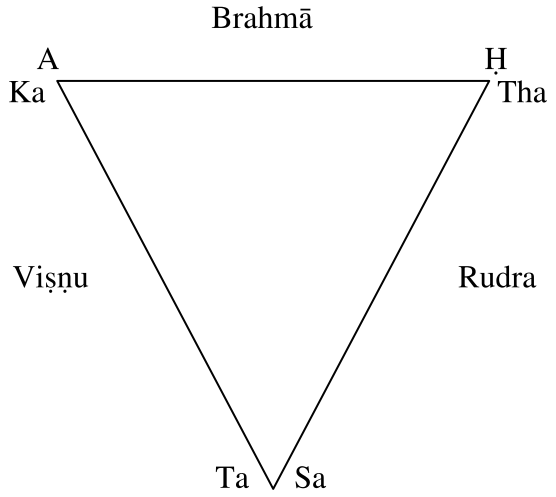
Diagram 12. The Triangle of Letters



41. This is the triangle of the Stone made of the Twelve Verses described in chapter three. Cf. 3/31-32 and 7/8 ff. Both the Triangle and the Hexagram are full of the energies of the letters distributed systematically within and around them. They are present in the Six Wheels of the subtle yogic body projected into the corners of the Hexagram that are referred to here as the Six Places. The Triangle represents the Voidness of the Transmental in the End of the Twelve. The Hexagram is the subtle body filled with the same energies differentiated into the Six Wheels.

NOTES OF THE TRANSLATION OF CHAPTER FORTY-THREE

1. The passage from 43/4 to the end is reproduced and glossed in the SamP. There it is called the *Yugāvatārasūtra*. Here it is called the *Caturyugāvatārasūtra*.

2. SamP: The Siddha called Sāda has authority in the Kṛta Age. The **goddess of the bliss of the northern (seat)** is well established. (The Siddha) **came** (to her). He came (to her) as (the god) whose accomplished state has no beginning (*anādisiddhatva*).

(Next comes) the teaching (*saṁketa*) concerning the worship of the (deity's) attendents (*parivāra*). At the beginning of a rite, (it is customary for) the Brahmin (to mention the names of one's family members) beginning from oneself (then that of one's) father, mother, brother, son, grandson, daughter-in-law, daughter, and grand-daughter, one by one. The same is done in order to know the god's family. (In this way it is clear that) these Siddhas worship (the goddess) Kubjā.

sādanāma siddhaḥ kṛtayuge adhikārī | *tiṣṭhati uttarānandadevī* | ***samāgataḥ*** *[anāgatā] anādisiddhatvenāgataḥ* | *parivārārcanasaṁketaḥ* | *yathāsmadādīnāṁ pitāmātābhrātāputrapautrasnuṣāputrīpautrīnāṁ [-pautrī-amṛtīnāṁ] brāhmaṇaḥ [-ṇa] pūjādau pṛthak pṛthak karoti tadvad devaparivārabodhārthaḥ* | *kubjopāsakāḥ [kubjāpāsaka] siddhā ete* |

3. The four Siddhas who revealed the teachings in the four sacred seats in the four Ages belong to the group of Five Siddhas. The missing Siddha of this group is Ananta (see above 25/41ff.). Sādakhya, the first Siddha, embodies the emissive state (*visarga*) of the deity. As such, he is responsible for the creation of the four sacred seats. This is discussed in the following chapter. Each of the four Siddhas had four disciples each of whom had many others. In each Age the teachings were also imparted to particular kinds of living beings, as listed in the following table.

16. The Sacred Seats of the Four Ages

Age	Siddha	Sacred Seat	Type of Being	Disciples
Kṛta	Sādākhya	Oḍḍiyāna	Gods	Amara, Ajara, Oṁkāra, Amṛtodbhava
Dvāpara	Śaṅkara	Jālandhara	Siddhas	Aruṇa, Varuṇa, Varada, Sacava
Tretā	Piṅgala	Pūrṇagiri	Celestial muscicians	Vijaya, Vindhyanātha Mārtaṇḍa, Meṣa
Kali	Śrīkaṇṭha	Kāmarūpa	Men	Khagendra, Kūrma, Mīna, Macchendra

4. After the **seven times seven hundred million** Siddhas* took initiation and worshipped (according to the procedure prescribed by the) *Manthānabhairavatantra*, one by one they were purified. By the power of the purification of that Verse (i.e. HSKHPREṀ) they became Siddhas. This is the story concerning (the events) in the Kṛta Age.

śatasaptakoṭipramāṇasiddhānāṁ [sata-] dīkṣāgrahaṇaṁ [-ṇe] manthānārcanaṁ [manthānarcanaṁ] kṛtvā [kṛtyā] caikaikaṁ prati aikaikena [akenaikena] puraścaritā bhavanti | tatślokapuraścaraṇaprabhāvataḥ siddhā jātāḥ [yātāḥ] | iti kṛtayugākhyānam |

*It appears that Mukundarāja is mistaken. The text clearly refers to 'gods' here, not Siddhas. Moreover, if they were Siddhas already there would be no need for them to undergo further purification.

5. Mukundarāja understands this verse quite differently. According to him it does not refer to the Divine Body. Instead, he takes what I have understood to be adjectives describing the Divine Body to be proper names of the disciples of Amṛtodbhava. Thus he writes:

SamP: The Siddhas belonging to the lineage of Amṛtodbhava are called Divyakāya. Mahādīpta and Devānugrahakāraka.

amṛtodbhavavaṁśīyāḥ [-yo] divyakāyanāma [-nāmā] mahādīptināma devānugrahakārakanāma [kaṁnāma] siddhāḥ |

6. SamP: I have said this in the past also, now I will tell (you) the essence of the second and third Age. The rest is clear.

pūrvakāle 'pi mayoktam idānīṁ dvitīyayugas tretāyugas tasya sadbhāvaṁ kathayāmi | śeṣaṁ spaṣṭam |

7. SamP: The Siddha is Śaṅkara and Maṅgalā is (the goddess who resides) there. He was very brilliant and had sons (who were) Siddhas, that is, (he had) Siddhas (as is disciples). These were Aruṇa who is the charioteer of the chariot of the Sun, Varuṇa, who is the charioteer of the chariot of the Moon. Varada who is the charioteer of the chariot of the stars and Saṁcara who is the charioteer of the chariot of the god's car festival (*devayātrā*).

śaṁkarasiddhas tatra [tri] maṁgalā | yasya mahādīptasya siddhaputrāḥ siddhā eva | aruṇaḥ sūryarathasārathiḥ | varuṇaś candrarathasārathiḥ | varadas tārārathasārathiḥ | saṁcaro [sacavo] devayātrārathasārathiḥ |

8. SamP: Piṅgala who belonged to the lineage of Amṛtodbhava came to (the goddess's) house, that is, he was in the land of Candrapura. Piṅgala's sons were Vijaya and the others.

amṛtodbhavasantānaḥ piṅgalaḥ gṛham āgata iti candrapuradeśe sthitaḥ | *piṅgalaputrā vijayādayaḥ [vijñādayaḥ]* |

9. SamP: Some were those called the guardians of the quarters. Some were called constellations. (There were) those called Dhruva and those called the circle of constellations. (There were others who were) **one hundred and twenty million (in number)**. And the disciples were one hundred and twenty million.

*kecil lokapālanāmakāḥ kecin [ke *] nakṣatranāmakāḥ dhruvākhyāḥ [-khyaḥ] punar [puna] nakṣatramaṇḍalādināmakā [-dhināmakā] dvādaśakoṭayaḥ* | *śiṣyāś [ślokāś] ca dvādaśakoṭayaḥ* |

10. SamP: In that Age everybody was yellow. In the Tretā (Age) they were red. In the Kṛta (Age) they were white and then in the (Age of) Strife they are black. These are the (Siddhas) who brought down (the teaching) in the Dvāpara Age.

tadyuge sarve pītavarṇāḥ | *tretāyāṁ raktāḥ* | *kṛte śuklāḥ [śaktāḥ]* | *ataḥ paraṁ kalau kṛṣṇāḥ [kṛṣṇaḥ]* | *iti dvāparāvatārakāḥ* |

11. SamP: Śrīkaṇṭha who belongs to Piṅgala's Kula, came (*piṁgalakule śrīkaṇṭhaḥ samāgataḥ*).

12. These four Siddhas are called Yuganāthas – the Lords of the Ages, and are generally considered by the early Kaula schools to be the founders of Kaulism in each of the four Ages. See intro. vol. 2, p. 309.

13. The text reads: *siddhāḥ kādyaḥ ṣoḍaśa ṣoḍaśa.* I understand '*kādyaḥ*' to mean 'belonging to the (tradition) beginning with Kā', which is the Western Tradition of the goddess Kubjikā. I understand the doubled '*ṣoḍaśa ṣoḍaśa*' to mean, 'sixteen at a time', that is, each Siddha initiated sixteen disciples. However, Mukundarājā understands this sentence quite differently. The expression '*kādi*' according to him means the series of consonants beginning with Ka. Conjoined to the vowels, there are sixteen of each. Thus he says:

> There are sixteen (for each of the consonants) beginning with the letter Ka (formed) by the division of the sixteen letters (conjoined with the vowels). Again, there the four Siddhas are also conjoined with the vowels.

kādiṣoḍaśa ṣoḍaśavarṇavibhāgena tatra [tanna] vibhāgena ca sasvaratvena catvāraḥ siddhāḥ sthitāḥ |

14. Oḍḍīśa, Tūṣṇīśa and Ciñcīśa are all names of the founder of the Western Transmission in this Age. This is probably the only place where Sthānu appears along with them. The first two are identified with one another below in 46/42ab. Concerning Ciñcīśa see above 7/62ab and for Vṛkṣanātha, his other name, see above 2/29-30ab. The text says that each one of these descended into a 'particular division' of the Western Transmission. Clearly these 'divisions' are the sacred seats. Thus, we are told indirectly that the four Siddhas of the sacred seats are all the First Siddha variously named.

NOTES OF THE TRANSLATION OF CHAPTER FORTY-FOUR

1. The first half of this chapter (up to line 44/35ab) deals with a Krama of twenty-eight mantras distributed in six units 4-5-6-6-5-2 corresponding to the Four Seats, Five Goddesses, Six Wheels, Six Yoginīs, Five Jewels and the Couple. The first four verses introduce the explanation of these units by outlining how the Krama arises from the Drop of transcendental Śiva, as his omnipotent will. This divine will is the goddess Kuṇḍalinī, the energy of the Transmental. Initially, she too is in a pure transcendental state of repose (*śānti*) and then assumes the sixfold form of the Krama, its states, mantras and other constituents by freely limiting her essentially infinite, undifferentiated nature as pure Sound (*nāda*). In this way she 'emerges below' first as Kula – the Triangle and then as Kaula, the Hexagram into which the Krama is emitted.

2. The four states, Beyond Form and the rest, mentioned here is a common way of analysing the expanse of reality as spheres within which function the sonic and pneumatic energies of the deity, understood to be universal and transcendental consciousness. There is no need to go into an exposition of the many and complex details of the features of these states and their interconnections. We limit ourselves to note here the context in which these lines appear in the KMT (11/7 = KuKh 44/7) and the previous verse from the ṢSS (28/22cd-3ab = KuKh 44/5cd-6ab).

The KMT presents these four states as the foundation of the Six Categories (*ṣaṭpadārtha*), which are the well known Six Wheels (*ṣaṭcakra*). This is achieved in the following passage by the discovery of a sequence of four, then five and finally six conditions of these four states that are related to the Six Wheels:

The transmission (*krama*) of the Divine Command, (*divyājñā*), that is, the lineages of the currents of the line of teachers (*santati*), has emerged (*jāta*) from Śiva who, without beginning or end, is the supreme cause (of all things). (4) [. . .] O Great Mother, know that the primordial Yoni is the supreme one of the supreme (reality). It is the supreme will that, associated with the four, Beyond Form and the others, is of four kinds. **Beyond Form is Kāmākhya. Form is the great Pūrṇagiri. Word is said to be Jālandhara, while the Body is said to be Oḍra** (= KuKh 44/7). The last (of these) is nectar (then the others are) subtle, very subtle and the first (respectively) making four. The first relationship (these have with ultimate reality) is said to be that with the god Akuleśvara. From Beyond Form comes the Supreme Drop which, radiant, is sustained by Śakti. Then comes Sound, the Blockage (*nirodha*) and the Half Moon, in due order. This is called the Pentad, the great dawning of the Jewel of Knowledge. She should be known to be the Supreme Yoni, the ocean of the path of action. (4, 6-10)

From the Principle of the Drop comes the Supreme Drop and the letters Ma and U. The letter A is said to be that which divides the Six Categories. From Form (*rūpa*) comes Word (*pada*). It is Time and has six faces. In association with the sixfold path, (the Yoni) emites and withdraws (all things). It brings about emanation of many kinds by means of the plane (*pada*) of the Six Categories through the conjunction (*yoga*) that exists between the supporter and the supported. This will now be explained. (11-13)

1) The Self sustains 2) Power. The Self is above *Haṁsa* which is within 3) the Wind in 4) the path of the channels (*nāḍī*). The channels are in 5) the body (*piṇḍa*) along with 6) the impurity of Māyā, which includes Karma and the others that pertain to the fettered soul. This is said to be the group of six that awakens the Path of Kula. The entire universe, the field of causes and actions, is born here. Śāmbhava knowledge, full of many sciences, comes from the Supreme.

KMT 11/14-16

The context here in our text is an exposition of the six parts of the Śrīkrama. The first of which is the group of four seats identified with the four states. Thus the redactor refrains from drawing more from the KMT. Nonetheless, we may safely assume that he saw a relationship between the two groups of six – the Six Categories of the KMT and the six parts (*prakāra*) of the Śrīkrama. Both emerge from the four states, which are the sacred seats from which the Krama is transmitted and are themselves the beginning of it. See above 19/6-8.

3. The triad Śiva, Śakti and the Self is identified here with Aghora, who is Navātman, Ghorā, who is Kubjikā and Śrīkaṇṭha, the first Siddha, respectively.

4. The fourfold nature of the Self relates, I suppose, to the four kinds of living beings (*bhūtagrāma*), concerning which, see above note 32 of chapter one. It also relates to the four Siddhas mentioned in the following lines.

5. The colours white, red and black, are normally associated with three qualities (*guṇa*) of Nature (*prakṛti*). Yellow is commonly the extra colour if a fourth is required. The commentary on the *Saṁvartāsūtra* in the ŚM explains: 'the union of white, red, black and yellow takes place by the union of Letter (*varṇa*) and Beyond Letter (*avarṇa*)' (*varṇāvarṇayogena śvetaraktakṛṣṇapītayogaḥ* fol. 6a). In this case the four colours of the energy of the goddess relate to the group of four vowels associated with the four seats. Presumably, in this context Mātaṅga, the fifth 'pervasive' seat, represents the aspect 'Beyond Letters' contained in the syllable OṀ.

6. According to YKh (1) (15/73 ff.) also, the goddess descends into the four sacred seats in each of the four Ages where she sings one of the four Vedas. In the seat of Oṁkāra she sang the Ṛgveda, in Jālandahara, the Sāmaveda and in Kāmarūpa, the Atharvaveda. Although not stated, possibly because a part of the text has been lost, she sang the Yajurveda in Pūrṇagiri. This appears to be the

order of correspondences here also. However, in the following verses this order has changed. The Ṛgveda is associated with Mitranātha who is the Siddha of Kāmarūpa. The Yajurveda is linked to Uḍḍanātha, the Siddha of Oṁkāra i.e. Oḍḍiyāna. The Sāmaveda is linked to Ṣaṣṭhanātha, the Siddha of Pūrṇagiri and the Atharvaveda with Caryānātha who teaches in Jālandhara.

7. Concerning these group of five goddesses and their function in the Krama, see below 64/1-34. See also above, 35/95-96ab where they are equated to the Five States (36/88cd-89).

9. One would expect the letters here to be the initials of the Yoginīs, which is what we usually find. However, the MSs agree that these are the letters. Moreover, they are in alphabetical order. Concerning the Six Yoginīs see below, chapter 63.

10. According to KMT 18/63cd, the third Jewel is that of the lower worlds (*pātāla*). This variant is uncommon. Again according to the KMT (ibid.) the fifth Jewel is associated with the hell world (*nārakaloka*), which is a common variant for the snake world (*nāgaloka*).

11. As is the case with the Six Yoginīs, this group of mantras, called the Five Jewels, is normally abbreviated to the initial letters. Thus they are associated with the letters Ga, Sa, Pa, Ma and Na that are the initial letters of the worlds (Gagana-, Svarga-, Pavana-, Martya- and Nāga- -loka) of the Yoginīs to which the mantras are addressed. However, whereas the readings of the MSs of the letters associated with the Six Yoginīs are fairly consistant, here the MSs are not. All the the MSs read the letter Va for Gagana and the letter E for Pavana. But the other three, which are also the readings of all the MSs, are in alphabetical order. I have

therefore emended, assuming that the Five Jewels correspond to the five labial consonants. Concerning the Five Jewels see below chapter 62.

12. Four Seats, Five Goddesses, Six Wheels, Six Yoginīs and Five Jewels make twenty-six. The text clearly tells us that this is a Krama of twenty-eight mantras so we would expect just two more. It seems, however, that there are three. 'Śilā' is normally the name for the traingular E or AIṀ. What Saṁgha and Kumāraka stand for is also unclear to me.

13. See tables in chapter 16 above. Śuṣkā – literally 'Dried Out' or 'Emaciated' – is here an alternative name of Cāmuṇḍā who is depicted as lean and stern. More commonly, she is a form of Kālī. She is thin because she is the embodiment of the subtle energy of the New Moon (see above 3/132). This is how she appears in the *Devīpañcaśataka* a scriptural source of the Kashmiri Kālīkrama where she is also called Kṛṣā (Thin One) or Kṛṣodarī (Small Belly). In that aspect But there, she is described as slim and with large breasts, like a beautiful young woman. The JY (fourth *ṣaṭka*) expounds Rāvā or Mahārāvā as an 'inner' form of Kālī, confirming Śuṣkā's identity with her. See intro. vol. 2, p. 209 ff..

14. As usual, after describing the contents of the Hexagram, we move out beyond it into the encompassing circle of Mothers (*mātṛmaṇḍala*). No less than the Krama, these too are aspects of Mother Kubjikā who is Parā and Mālinī, the source (Yoni) of emanation. She emanates the universe of mantras 'in this way' by ordering herself systematically into the Mothers of the eight classes of letters. Finally, she emerges out of the inner *maṇḍala* onto the surface of the body of the god as the letters.

15. The following projection of the letters onto the god's body follows the sequence of the Assembly of Sounds. See KuKh vol. 3, appendix 5.

The goddess Kubjikā as Parā inwardly consists of the fifty female energies of the Mālinī alphabet. Externally the god's body consists of the fifty male counterparts who, projected onto him, are united with their inner female counterparts. In this way both are charged with the emission of the union of fifty couples. The essence of the fifty energies and their possessors are the eight Mothers who govern the eight types of letters. The Mothers are generally understood to be projections or emanations from the body of the goddess who is, in her turn, an emanation from the body of the god. Here, the implications of this common, basic doctrine, are made explicit. These female energies can be projected from the god's body because they constitute it. This is the embodied, energized and differentiated (*sakala*) aspect of the deity.

16. Ṭa, the first letter of the cerebrals, here stands for all the cerebral letters. According to the ṢSS this is located on the right buttock. According to the KnT, it is on the right thigh.

17. According to the ṢSS, Ta, the first dental letter, is on the left buttock. According to the KnT it is on the left thigh

18. According to all sources, cerebral and dental letters are located on the thighs and buttocks. Moreover, the usual order is spine (Ba), navel (Bha) and heart (Ma). Here the order of the last two entries has been reversed.

19. Usually the goddess, who is the embodiment of the god's will (*icchā*) emerges from the god not, as here, the other way round. This came to be the accepted Śākta view. Bhattacharyya (1974: 6) explains:

> In the later Śākta phase of the primitive Mother Goddess cult, the Devī is transformed into the eternally existing Female Principle, the *prakṛti* or *Śakti*, and having associated with the male principle, the *puruṣa*, she becomes Jagadambā or Jaganmātā, the mother of the universe, the creator of the gods. In her highest form she is Mahādevī, the consort of Śiva but, inspite of being the consort of the latter, she is his creator.

See above chapter 13 where the goddess as Mahāmāyā is identified with *prakṛti*. In that context we have observed how the position of the Kubjikā Tantras is half-way to reaching this view. Here a distinction is still maintained, at least in terms of the principles of existence, between *puruṣa* and Śiva although the two are ultimately identical.

20. These are the four names used to designate the fifty letters that form the Assembly of Sounds (*śabdarāśī*). See Schoterman 1981: 218.

21. According to 2/41-42 above, there are fifty worlds that range from Kālāgni to Śiva. These are the worlds in the Śāmbhava sphere and should be distinguished from those that belong to the cosmic order represented by the Sixfold Path (*ṣadadhvan*). It is clear from the context that these fifty worlds correspond to the fifty letters of the alphabet. A, the first letter, represents Śiva's world. KṢa, the last letter, represents the world of the Fire of Time. The goddess is in the middle of the circle of the letters and emanates the universe beginning with these fifty Śāmbhava worlds that are 'beyond the sacred and profane'.

In the beginning the goddess emerges from the god. Here she generates and contains the god, the Cosmic Man made of the letters. In this way the one self-replicating reality is complete.

22. This is the *Kumārikākhaṇḍa*, which the colophons at the end of most chapters call the *Vimalaṣaṭkanirṇaya* – the Teaching of the Pure Six Thousand Verses.

23. The emanation of the Śrīkrama is the subject of the first part of this chapter up to verse 47. The following passage concerning moral discipline (48-62) is only loosely, if at all related to that. The following five verses, set in *sragdharā*, praise five forms of the First Teacher as Ādinātha, Oḍīśanātha, Tūṣṇīnātha, Caryānātha and Vṛkṣanātha. These verses also seem out of place here. In this

context it would be more relevant to praise the goddess as the source of the Śrīkrama.

24. 'Night and day' are the two streams of the vital breath – *prāṇa* (exhalation) and *apāna* (inhalation). The syllable that conjoins them and maintains the alternation between them is HAṀSA, the Unstruck Sound of the energy of Kuṇḍalinī that flows within them. This is the pure consciousness which is the essential nature (*citsvarūpa*) of all living beings, even the gods

25. 'Divine drink' (*divyapāna*) normally denotes spirituous liquor, which represents the inebriating inner lunar nectar.

NOTES OF THE TRANSLATION OF CHAPTER FORTY-FIVE

1. These Kulas may be the sacred seats. Elsewhere we are told that the six seats constitute the sixfold Kula (61/23 ff.). In this case these appear to be four. If this is correct and the sequence of the seats is the usual one, the series is as follows: Energy > Bhairava > Akula (Oḍḍiyāna) > Vikula (Jālandhara) > Puṁkula (Pūrṇagiri) > Khakula (Kāmarūpa). cf. 42/14cd ff..

2. See above 38/11-12 and note.

3. By 'above' here is probably meant the End of the Twelve. The supreme form of all the Kramas is in the *maṇḍala* there. Although there may be an outer representation of this *maṇḍala,* it is not essential. But even if there is one, it is to this inner *maṇḍala* that the worshipper of the Krama's attention should be directed. The Kaula adept may well be engaged in ritual action, even so, his primary concern is with the inner world within his subtle body. Devoid of that inner dimension he is not a true Kaula. This is why the Tantra regularly refers to him as a yogi. Although these Tantras prescribe elaborate ritual procedures for Kaulas, the Krama is also frequently described with no reference to any outer forms. We may understand that the drawing of a *maṇḍala* and the projection of the Krama into it is implied, but this is not essential. The Kaula may practice without performing outer rituals but he is wasting his time if when he does so the processes that are the inner counterparts represented by the outer ritual forms are not taking place. He must, at least, clearly represent them within himself in his imagination, visualizing them as described in the scriptures.

4. The Command is the energy of bliss (*ānandaśakti*) that generates the bliss that empowers even Deity. Devoid of bliss even the Deity would be powerless.

5. The Six Yoginīs are projected into the corners of the hexagram. The seventh Yoginī is Yākṣiṇī who is Rudra's energy, the Yoni in the centre. See below, 63/8.

6. The twenty-seven divisions are also mentioned in 7/7, 45/53, 58/95 and 60/23. See note to 3/52cd-53ab. In this case the mantras of the Krama of Twenty-seven appear to be those relating to 1) the Four sacred seats 2) the Siddhas of the four sacred seats 3) the Five Jewels 4) The Six Yoginīs 5) the group of five 6) the three triads. Thus this Krama of the Youth is configured 4-4-5-6-5-3.

7. The Couple is Navātman and the Goddess. Presumably, the Lord of the Couple is the former and the 'Vidyā of one syllable' is the Goddess in the form of the seed-syllable HSKHPHREṀ or AIṀ.

8. This *Mudrāmaṇḍala* is *Saṁvartāmaṇḍala*. See above note to 2/14, cf. 3/164d, 51/24a, 60/17b and 68/49d.

9. We have seen that the *Kumārikākhaṇḍa* is called *Vimalaṣaṭka* and that it is the 'Pure Division' – *Vimalabheda* of the MBT. Thus the expression

vimalārtha, which I have translated literally as 'pure meaning' may also mean 'the sense of the *Vimala* (section of the MBT)'.

10. It appears from the context that the Krama outlined in the previous chapter is that of the Aged (*vṛddhakrama*), which is a sequence of twenty-eight mantras. It is followed in the first part of this chapter by a brief account the Krama of the Youth (*kaumārakrama*), which is a sequence of twenty-seven mantras. The goddess now announces that she is going to talk about the Krama of the Child (*bālakrama*). However, suddenly in the next verse she says that she has explained it. Clearly this part of the text has been lost.

11. The Transmission of the Skyfarer is the Divine Current (*divyaugha*) expounded in chapter 57. It is, essentially the inner flux of the goddess's energy in the centre of the *maṇḍala* which empowers the emanation through the Kramas within it. In this way they are 'conjoined' to it.

12. Cf. above 45/31-32.

13. See chapter 18.

14. See chapter 19.

15. See chapters 9 to 12.

16. Presumably these are the Five Jewels; see chapter 62.

17. See above 45/29.

18. KuKh 30/85cd: (The corresponding directions are) east, west and the middle and the corners in the north and south.

19. KuKh 30/55c: He who knows this knowledge

20. KuKh 30/88cd: This is Yoga.

21. KuKh 30/89cd: One is (thereby) never destroyed.

22. KuKh 30/91d: Khageśī

23. Concerning Bhairava's identity as Sadyojāta see YKh (2) 16/226-229 quoted in the intro. vol. 1 p. p. 194. Sadyojāta is Sadāśiva's western face and so the 'western house' of the goddess Kubjikā is the Transmission of Sadyojāta (see, for example, 3/16 and 7/47).

24. '*asadyaḥ*' means literally `that which is not immediate'. It is the fleeting moment of the flux of time we cannot catch in its immediacy.

25. The meaning of the expression *śekharabhāṣitam* is unclear to me.

26. KuKh 45/64cd-69 approximate to KuKh 39/168-173ab.

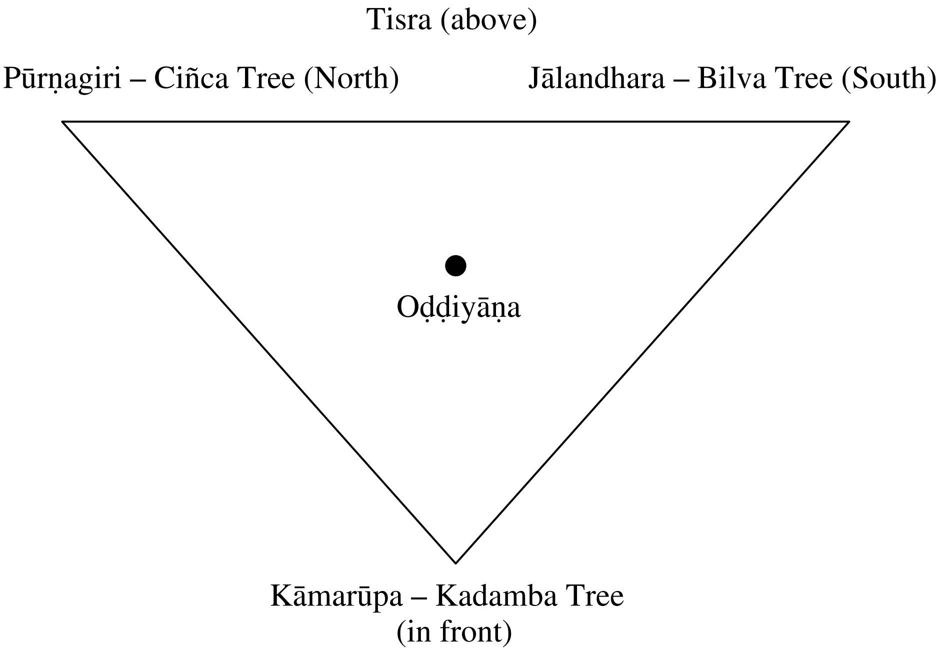
NOTES OF THE TRANSLATION OF CHAPTER FORTY-SIX

1. We have seen in chapter thirteen that the Kubjikā Tantras accept several variant forms of the Sāṁkhya division of reality into principles of existence (*tattva*). In the following passage the principles are twenty-five, conveniently distributed in the five sacred seats of the goddess's Triangle. Here, as elsewhere, the Triangle filled with the principles of existence is called Yogapīṭha (46/9, cf. above, 38/28-9 and below 46/9 and 46/21). Sometimes we find that the syllable AIṀ is also called Yogapīṭha (see 38/28-29 and 58/92cd-97ab) and, indeed, the entire *Saṁvartāmaṇḍala* is called that when it is contemplated in the End of the Twelve (see notes to 2/18 and 7/46-47ab).

Diagram 13. **The Trees of the Sacred Seats**



Tisra (above)
Pūrṇagiri – Ciñca Tree (North)
Jālandhara – Bilva Tree (South)
Oḍḍiyāṇa
Kāmarūpa – Kadamba Tree
(in front)

2. *pīṭhabhūtāni* can also be understood to be an attributive compound qualifying an implied *mahābhūtāni* in which case the meaning would be: '(These) are said to be (the elements) as the sacred seats.'

3. Tisra, the fifth sacred seat, is located above the triangle that contains the other four. The triangle is often identified, amongst other things, with Meru.

Kailāsa is said to be located above (see below 61/100-103ab), so we may reasonably assume that Kailāsa here stands for Tisra.

4. Space is present in all the seats (46/2) and Speech is similarly pervasive. Thus they are probably related to Tisra the seat that pervades the others.

5. Here spelt Pūrṇagiryaka.

6. We get a complete picture of the principles projected into the *maṇḍala* by referring back to the commentary on the *Saṁvartāsūtra* in chapter two. There the reader will recall that the deeper metaphysical nature of the twenty-eight constituents of the Krama projected into the hexagram were explained in terms of the principles, four states of consciousness and the three qualities of Nature (see 2/8 and notes). Vṛkṣanātha is associated with the qualities and projected into the centre of the hexagram. Thus he coincides in nature and location with Puruṣa in the centre of the series of principles in the Triangle surrounded by the three qualities in the corners of the Triangle.

7. In this case the Five Jewels are the Five *Praṇavas*. See above, chapter 17, note 36.

8. The seat in between the one in the north and that of the south is the one in the middle of the triangle, that is, Oḍḍiyāna (cf. below 46/14cd-17ab).

9. The 'secret names' of the *Praṇavas* are those the Five Siddhas. The two sets are intimately connected by their essential relationship with the five gross elements. The Five Siddhas create the five gross elements in which they reside as their Lords and the Five *Praṇavas* are their seed-syllables. Concerning the deposition of these Five Jewels, see above 24/105-112ab.

10. That is in Oḍḍiyāna; cf. above 46/11ab-12 and note.

11. Also called Mudrāmaṇḍala and Yogapīṭha (as in the following verses), Mudrācakra is the triangle in the centre of the *maṇḍala* from which the whole of the *Saṁvartāmaṇḍala* derives its name.

12. See 55/10cd-11.

13. See above, note to 5/76cd-77ab.

14. The element Fire is located in the sacred seat of Jālandhara which is in the south where the Bilva tree is located. Thus the Bilva tree symbolizes the intellect. The Kadamba tree symbolizes the mind-stuff which is modified into Fire and the intellect. The Ciñciṇi tree symbolizes the state of oneness brought about by the bliss of the Yoni.

The Kadamba tree is in the Wheel of Gems where the element Fire is located. Possibly the Self is located in the Wheel of Unstruck Sound. The Self is the Gander – Haṁsa – the pure Unstruck Sound of the stream of energy that flows within the vital breath (61/90). Thus the 'speaking' in which it is constantly engaged is the Unstruck Sound of profound inner Silence and so the 'resounding' Kadamba, which symbolizes the mind (*citta*), is said to reside 'in the centre of the Silent One' (61/91)

The mind, filled in this way with all the energies of consciousness, ascends from the lower centres in the flow of the movement of Kuṇḍalinī until it reaches the Wheel of the House of Gems. The radiant Fire (*tejas*) there energizes it and transforms its upward linear motion into a circular one. This dynamic, energized mind is the intellect. The two, namely, the intellect and the Fire that energizes it emanate from the mind stuff symbolized by the Kadamba tree growing in the Wheel of the House of Gems. The Drop of energy generated from the intellect is symbolized by the Bilva Tree. This presumably takes place in the Wheel of the Self-supported where the seminal Drop is produced. Projected upwards by the rotating motion in the Wheel of the House of Gems, it reaches the End of the Twelve where the Circle of Saṁvartā, which is that of the Ciñciṇī tree, is located. This is achieved by 'dividing the seen from the unseen', that is, the sphere of immanence below and the sphere of transcendence above. Ciñciṇī is the supreme Śakti within the Yoni (*bhagasthā*) which is at once the energy of bliss and the power of pure reflection (*mananā*) which in a state of perfect rest ultimately merges into Śiva (61/92-94ab). This process is called the 'splitting apart of the three Trees' (61/60-62).

15. The following table lists the principles of existence and the other entities contained in the sacred seats of the Yogapīṭha.

* The Age to which Trisrota corresponds is not mentioned here. Elsewhere we are told that Trisrota is the seat of the future (6/189) that will appear at the end of the Age of Strife (6/179).

16. The MSs continue with the following lines that make no sense here at all and so have been removed from the body of the text. See notes to the edition for the Sanskrit:

(Impelled) by desire (*icchā*) one lives in the forest or in the midst of men. (Impelled by) desire, one experiences worldly, joys and sorrows (*bhoga*). (Impelled by) desire, one observes (an austere) vow (*vrata*).

By desire all things are emitted and by desire they are withdrawn again. It is due to desire that one abides in the city (of the body) and (impelled) by desire one leaves the body (*pura*). The liberated soul is everywhere. He is not born (again) in a womb.

17. The following passage, KuKh 46/30cd and 46/31cd-33, concerning the Five Siddhas, corresponds to 25/43ab and 25/44-45ab above and YKh (2) 15/23ab and 15/24-25. Here these lines have been inserted into the text in order to justify the statement that Siddhanātha mentioned in 46/35 is Piṅgalanātha, the fifth of the Five Siddhas (see note there). What follows for most of the rest of the chapter is drawn from the ṢSS where the appearance of Piṅgalanātha in this role is justified in an introductory passage in a more complex manner that the redactor felt was necessary to reproduce in the text he was constructing. Thus, unless there is a common third source, which is unlikely, the KuKh has drawn from YKh (2) which is, therefore, earlier.

This passage is introduced in YKh (2) as follows:

This god, called Self-Existent (*svayaṁbhū*), is well established in (the observance of) great austerity. The one called Victory arose (there in that) place of his and he became fivefold so as to serve as the cause of the deluding clutter of creation.

svayaṁbhū nāma devo 'yaṁ mahātapasusaṁsthitaḥ [k: -taṁ] ||
tasya sthāne samutpanno vijayo [k; samutpannā vijayā] nāmanāmataḥ |
sa eva pañcadhā bhūtaḥ sṛṣṭiḍambarakāraṇāt || YKh (2) 15/21cd-22

18. See above, chapter 1, note 32.

19. See also below 46/156cd-160. Instead of 46/33 YKh (2) says:

In this way the Lord who is fivefold is well established in Earth and the rest (of the elements). This is the god (*deva*) Ciñciṇīnātha. He is Bhairava who has attained the Command. He is the Lord (*nātha*) who has five forms (*mūrti*) and is able to (both) grace and chastise.

evaṁ pañcātmako [k, kh:-kaṁ] devaḥ [k, kh: deva] pṛthivyādiṣu saṁsthitaḥ [k, kh:-taṁ] |
ciñciṇīnāthadevo' yaṁ ājñāsiddhas tu bhairavaḥ ||

pañcamūrtidharo nātho nigrahānugrahakṣamaḥ | YKh (2) 15/25-26ab

20. In other words, the first Siddha, here called Ciñciṇīnātha, is Bhairava who prays to the goddess who appears out of the Liṅga and receives from her the empowering Command. He is the god, who thus empowered, assumed these five forms (see above 25/41-46ab and notes).

21. The rest of this chapter is drawn from the chapter 43 and a part of 44 of the ṢSS. However, it is not simply reproduced from there. The text has been rearranged. Moreover, verses here and there and even whole passages have been omitted. These are as follows: ṢSS 43/19cd-46ab – concerning Tūṣṇīnātha and his exploits; 43/107cd-117ab (after KuKh 43/130) – concerning offerings of wine to the Eight Mothers and the others on Candraparvata. 43/120cd-192 (between 53ab and 53cd) – the story of Vajrabodhi and his conversion. Other stray missing verses are ṢSS 43/200-202, 207-210ab, 214-215, 44/1-2ab.

We know that the text has been drawn from the ṢSS (or a common source) because the changes in the order of the text and the omissions sometimes necessitate reference to the ṢSS to understand and edit the text. The parts of the text that have been omitted from the ṢSS are recorded and translated in the notes. The correspondences between the two texts are noted as we go along. The reader is also referred to the concordance. KuKh 46/35-42ab = ṢSS 43/12-19ab.

22. The text here is not clear. First we are told that Siddhanātha came down into the world on 'the northern bank of the milky ocean'. The commentary (quoted in note to 46/47cd-49ab) is not very helpful. It simply refers to this place as being on one of the 'sides of the Kaula mountain'. He stayed there with 'Dakṣa's daughter' where the 'first descent' of the teachings took place. This place is not yet in the land of Bhārata to which he goes only subsequently. Further ahead, it seems we are told that the mountain onto which he descends is within the milky ocean. Perhaps this is the Island of the Moon onto which Siddhanātha descends according to the opening verse of the CMSS:

The supremely pure Siddhanātha who is all things resides in the womb in the calyx of the lotus of the consciousness of the divine Sun. He brought down onto the Island of the Moon in the middle of the great ocean the supreme light of consciousness of (the goddess) Ciñciṇī. (1)

divyārkabodhakamalodaragarbhasaṁsthaṁ viśvātmakaṁ paramanirmalasiddhanātham |
yenāvatārita mahārṇavamadhyacandradvīpāntare [k: candraḥdvīpāntaraṁ; kh: -candraḥdvīpāntaraṁ; g gh: candreḥdvīpāntaraṁ] paramaciñcinicitprakāśam || CMSS 1/1

Thus it appears that the 'ocean of milk' is the ocean of consciousness and the mountain onto which Siddhanātha descends is on the Island of the Moon which is, from one point of view, in the middle of it, and from another, to the north of it, in the sense of above it, at its it highest point of immanence where it makes contact with the transcendent.

23. Siddhanātha, like Mūlanātha (lit. "Root Nātha") is not a proper name but a general appellation for the founder of a lineage or a branch of one. In this case, Siddhanātha is the First Nātha – Ādinātha, the original founder of the Western Transmission in this Age. Here Siddhanātha is called Piṅgalanātha. As we go through the text and the commentary we notice that he goes by various names including Mīnīśa, Maunīśa, Kūrmanātha Oḍḍīśa, Tuṣnīśa, and Ṣaṣṭhanātha. These names derive from aspects of Ādinātha's nature or his actions and behaviour. For example, Tūṣṇīnātha was given this name because he observed a vow of silence (*tūṣṇībhāva*) and so is also called Maunīśa. He is called Kūrmanātha because, like a tortoise – *kūrma* – that withdraws its limbs, he withdraws his senses.

Here Ādinātha is called Piṅgalanātha who is the fifth of the Five Siddhas and governs the element Space. When he descends into the world he assumes the form of the four Siddhas who preside over the four main sacred seats. Although the text does not say so explicitely, we may connect the group of Five Siddhas with the Siddhas in the four sacred seats as forms of Piṅgalanātha with him as the fifth. Similarly, the element Space that he governs pervades the other four elements and are derived from it.

24. Each clan (*gotra*) corresponds to one of the four lineages the founder, Siddhanātha, alias, Piṅgalanātha established when he assumed the 'four forms' of the Siddhas of the sacred seats mentioned in the following lines.

25. We have seen (in intro. vol. 2, p. 437 ff.) that according to another scheme presented in the *Ṭīkā* (folio 178a ff) the three Siddhas Oḍīśa, Ṣaṣṭhīśa and Mitreśa are the disciples of Śrīnātha, who is identified with Tūṣnīnātha. These three founded the lineages of the Eldest, the Youth and the Child in the Tretā, Dvāpara and Kali Ages, respectively; while Tūṣṇīnātha belongs to the Kṛta Age. Each of the three Siddhas founded all three lineages in their respective ages, just as Tūṣnīśa is said to have done so in the Kṛta Age. The Nine Nāthas are the disciples of Mitranātha who founded the lineage of the Child in the Kali Age. Three of the Nine Nāthas each founded one of the three lineages within the lineage of the Child.

The expansion of the basic triadic model into one of four units as it is here, entails a reversal of the order of correspondences of the Siddhas and the Ages in which they are said to have founded their lineages. Thus Mitranātha is said to have taught in the Kṛta Age, Caryānātha in Tretā, Ṣaṣṭhanātha in Dvāpara and Oḍḍīśanātha in this, the Kali Age. In this case, even though the Nine Nāthas are the same, their teacher is said to be Oḍḍīśanātha who is a identified with Tūṣṇīśanātha. As in the triadic scheme, three of these Nine Siddhas (who are the same as in the other scheme) go on to found the three lineages but no mention is made of any association of the preceding four Siddhas with these lineages.

26. The commentary on the ṢSS from which the KuKh has drawn this chapter, relates these Siddhas to the Lords of the Ages (*yuganātha*), who are said to be the founders of Kaula Tantra in the four Ages. The common links are the Five Siddhas, the first four of which the ṢSS identifies with the Yuganāthas. According to the KuKh they all came together in the Kali Age. They were initiated by Śrīkaṇṭha into the Western Transmission and form a part of the Divine Current (*divyaugha*) (see above, 43/24-26). The reader will recall that the KMT maintains that the tradition (*āmnāya*) it is transmitting is the subsequent and final one (*paścima*) in relation to the previous (*pūrva*) one which is that of the disciples of the fourth Yuganātha, Matsyendra. The commentary goes on to tells us about Piṅgalanātha, the Siddha who came after him and his disciples:

> Then another time, the fifth (Siddha), Piṅgalanātha, assuming a bodily form, came down (into the world) in order to grace (it). Where (did this take place)? In the northern part of the ocean of milk. There on the sides of the Kaula mountain (*śilā*) (he did) everything, including grace (the world) and the rest, together with Dakṣa's daughter having brought about the first descent (into the world of the teaching in the form of) the first (*ādi*) Kādi division called the descent (into the world of) Dakṣa's daughter. Thus, once he reached the land of Bhārata, he established the (spiritual) order (*vyavasthā*) of the four sacred seats and the four Siddhas like (the order established by the Siddhas of the) four Ages in order to elevate the world of transmigratory existence. The (spiritual) order of which four (did he establish)? (He established) Mitranātha in Kāmarūpa, Caryānātha in Jālandhara, Ṣaṣṭhanātha in Pūrṇagiri and Oḍḍīśa in Oḍyāna. One should know that, as before, they have four names. What are the previous names? (They are) Khagendra, Kūrma, Meṣa, and Macchendra. Thus Macchendra is the Siddha in the place of Oḍḍīśa. He also (established the spiritual order) consisting of the four sacred seats as the four sacred seats (*tenāpi catuṣpīṭhatve catuṣpīṭhamayīti kṛtā*). What are their names. (They are) as follows:
>
> Again, O goddess, in accord with the division of the four Ages, that is, Kṛta (*kṛ*), Tretā (*tṛ*), Dvāpara (*dvā*) and Kali (*ka*), in due order, they are (respectively) Ā, KU, KUṀ and CA, who are established in the diversity of (Kaula) practice (*caryābheda*). (This) group of four that has come (*jāta*) from the sacred seat on the peak of the mountain (of the Moon) has brought down the Divine Transmission into the three worlds. ṢSS 43/20cd-22ab.

Comm: Ā KU KUṀ CA – Ā is Ādhāranātha, KU is Kuraṅgīśanātha, KUṀ Cakrīśanātha called Kuṇḍalīśa, and CA is Caryānātha. Where have they been appointed? It is said: Ādhāranātha in Oḍḍiāṇa, Kuraṅgīśa in Jālandhara, Cakrīśa, who is called Kuṇḍalīśa, in Pūrṇagiri, and Caryānātha in Kāmarūpa. Thus making four.

Yuganātha	Siddha	Alias of Siddha	Sacred Seat	Age
Khagendra	Mitranātha	Caryānātha	Kāmarūpa	Kṛta
Kūrma	Caryānatha	Kuraṅgīśa	Jālandhara	Tretā
Meṣa	Ṣaṣṭhanātha	Kuṇḍalīśa	Pūrṇagiri	Dvāpara
Macchendra	Oḍḍīśa	Ādhāranātha	Oḍyāna	Kali

27. The ṢSS continues with the following narrative:

O goddess, when the Kali Age began, Mīnīśa, (also) called Oḍḍīśa, sealed all the Transmission (*krama*) and then took and observed a vow of silence. The members of the congregation of the Practice of the Rule (*samayācāramelaka*) belonging to the Kula tradition (*āmnāya*) who were (thus) stamped (*mudrita*) (with the seal of the Command) all came at the end of the cosmic age (*kalpa*) and, even though they were of three kinds (according to their lineage), they all meet together in one place. (21cd-24ab)

He is called Tūṣṇīśa because of (his) silence (*tūṣṇī*). This is because, born into the three worlds, and observing a vow of silence he always practised (the knowledge of) Gaurī and Nirvāṇa (*nirvāṇaceṣṭita*). (24cd-25ab)

O Umā, abandoning all ties he, that sage who had washed away all sin, wandered (all over) the earth and sea in disguse. He, the lord (*prabhu*), abandoned the venerable and divine cave (*guphā*) and moved (on) with (his) practice (*caryā*). He had previously freely deceived the triple world by (his) secret practise (*pracchannacaryā*). Then, O beloved, (after having undertaken) many kinds of spiritual activities (*vividhacaryā*), he (came) to face the west. (25cd-26)

There is a city there called Candrapura (the City of the Moon) with (many) citizens located on the beautiful and extensive shore of the western sea in the auspicious forest of the sea in the great land called Koṅkaṇa. (27-28ab)

Comm: Ṣaṣṭhanātha again established the sacred seats and, having done so, he took a vow of silence and, having sealed the Transmission, abided thus until the group of three Nāthas, that is, Mitranātha, Caryānātha and Ṣaṣṭhanātha, entered his body. (And so) the one and only image (*mūrti*) of Ṣaṣṭhanātha was made whose name and form is Piṅgalanātha. (And so) he abided, observing a vow of silence up to the end of the aeon (*kalpa*) He was then (called) Maunīśa. Maintaining (this vow of) silence he wandered over all the earth. What for? In order to realise the knowledge of Gaurī and Śaṁkara. He wandered (over the earth) until he reached the western sea where Koṅkaṇa is located. The town of Candrapura is there and a mountain called Sparśa where the Stone of the Moon (*candraśilā*) is located. Below that lies the town of Hāṭakeśvara that extends for one hundred leagues. Hāṭakeśvara lives there permanently. Vajrakubjeśvarī is also there along with the sixty-four goddesses. She has matted hair. The lord Hāṭakeśvara is worshipped there by the eight kings of the snakes. He is then said to be the Lord of the Snakes.

That beautiful and excellent city was adorned with divine ramparts, step wells (*vāpi*), (ordinary) wells (*kūpa*), tanks and flowing streams and resounded with the sound of the birds in the gardens of (its many) beautiful buildings. The (main) crossroad was full of the joy of the people (who rejoiced as if in a perpetual) great festival. (It was adorned) in places with temples whose forms (were studded) with crystals, emeralds and corals and (elsewhere) with patches of trees rich with (many) beautiful (*vicitra*) flowers. (It was adorned) in places with (initiates) who knew the Wheels (*cakravijñānaiḥ*) and in others with the sounds of love-making and in others (again) with great people who discussed the meaning of all the scriptures (*śāstra*). (29cd-32ab)

There was a king there called Candraprabha and he belonged to the dynasty of the Kadambas. Like the king of the gods, he was the ruler of all the worlds. (32cd-33ab)

There he first worshipped me, the God of the gods and, having done so, (the Siddha) reached the City of the Moon which is hard to find even by the gods. O goddess, to the south of that (city) is the lord of mountains called Sparśa. There is a divine grove there adorned with many trees. To the south of that is a tank in the middle of which is an auspicious stone (*śilā*). Below that is a divine city that extends for a hundred leagues. (33cd-36ab)

It shines with jewelled ramparts and, adorned with gold, (it is as if) in flames. The great god Hāṭakeśvara who has sanctified the surface of the earth (resides there) endowed with every limb surrounded by adepts and by Apsaras, amused by (their) singing and instrumental music. (36cd-38ab)

The goddess who has the power to accomplish (*siddhi*) every goal resides there. She shines like the autumn moon and is adorned with pearl ornaments. Her matted hair is well tied and she is (as if) burning with the rays of bliss. Brilliant like the twelve suns, she is attended by Siddhas and Gandharvas. Within the circle of the sixty-four Yoginīs, she is amused by the aesthetic savour (*rasa*) of the sport (that takes place there). She is satisfied with the bliss of (the inebriation of) wine and her eyes are pervaded with knowledge. The goddess who resides there is the Supreme Goddess (*parameśvarī*), Vajrakubjīśvarī. (38cd-41)

The sovereign authority (*adhipatya*) that resides there (and extends) over all the residents of the underworld (*pātālatala*) (is imparted) by the consecration of the king of the snakes and so he (who governs there) is said to be the Lord of the Snakes. (42)

When the goddess Pārvatī had brought about the great dawning (*mahodaya*) of divine knowledge and she who has many ways (of acting) (*gativipulā*) had come along with the Lord of the Foundation, tirelessly (many times) night and day, (finally) sat down in her own place. There the yogi, the Lord of Snakes, free of envy is intent on Yoga and, practicing austerities (*tapaścaryā*), observes a vow of silence. (43-45ab)

ṢSS 43/33cd-45ab

The ṢSS continues with what is here KuKh 46/64cd onwards.

28. Prior to his descent into the world the First Nātha, as Ciñciṇīśa assumed the form of the Five Siddhas. In this way he generated the five gross elements and with it the world into which he enters. Next he descended into that world and assumed the forms of the Siddhas who teach in the four sacred seats. Now he again undergoes a protean change. This time instead of assuming the form of a teacher, he assumes the form of his disciples. The word 'again' (*punar*) implies that the process by which the Nine Siddhas are generated as Tūṣṇīnātha's disciples is the same as the one that brought about the previous transformations. The First Nātha has several names. In that case it is clear that he remains essentially the same. But this is also true when he 'assumes the status of a disciple'. All the disciples are the teacher, the difference between them is not essential. They are 'made from his own limbs' (ṢSS 43/210ab). But they are not just parts of him. They are all the same incarnate deity *in toto*, no less than the Siddhas of the sacred seats. The difference between them is literally nominal. They differ only name, not nature. The Nine Nāthas spread the teachings to the

demons in the the netherworld and the gods in heaven, not only in the world of men (above 7/70cd-73ab and note 38 to 46/55cd-56). And so the purpose of these ‘names’ is, as the text tells us, ‘to grace the universe’.

29. The following passage from verse 42 to 45 corresponds to ṢSS 43/117-120ab. Then 46/46-52 corresponds to ṢSS 43/193-199.

30. Rāma is the name of the eighth Siddha (cf. above 7/68cd-70ab). Here we are told he is ‘r*āmatattva*’ that I have translated as the ‘principle of delight’. Jayarartha quotes the *Triśirobhairavatantra* where the god asks the goddess about this. Then he comments that ‘the answer to this (question) is given in many books’ (*tatsamādhānaṁ bahunāgranthena kṛtam*) (TĀV on 1/86) and so was well known. It is not unlikely, therefore, that our text is indeed alluding here to this. Paraphrasing the *Triśirobhairavatantra*, Abhinavagupta explains what this principle is and the practice associated with it:

> (The yogi) must, once abandoned the `upper' and `lower' (breaths), enter (into the centre where), residing in the middle abode, he is established in delight (*rāma*). This delight (accompanies him) while moving, abiding, dreaming (the dream of thought constructs) and waking (to the intuition of knowledge). (It is present) in the opening and closing (of the eyes, in which the yogi experiences the cosmic and the transcendental states of consciousness), while running, jumping, exerting an effort, experiencing power, in the various forms (*bheda*) of the intellect (*buddhi*), in entities, in names and in countless actions. In all this Śiva, the supreme cause, is omnipresent.
>
> He who, with his mind free of impurity, by suppressing his memory (the source of thought), meditates on the supreme object of meditation, residing on the plane of movement and rest (*gamāgamapada*), attains to the supreme Śiva otherwise called Bhairava by the repeated recitation of mantra (*japa*). The repeated recitation of mantra is said to be one's own nature free of the polarities of Being and Non-Being. TĀ 1/86cd-90

Jayaratha explains that: ‘Rāma is the Supreme Self (*paramātman*) who delights (*ramate*), that is, sports with the wonderful variety of all things, that is, with each specific thing both sentient (living beings) and insentient (objects).’

31. The ṢSS adds:

> They are divine and possess great vitality (*vīrya*). They have emerged from the Lord of the Foundation (*ādhārīsa*) and, endowed with knowledge and wisdom, they have come down through the tradition (*pāramparyakrama*).
>
> Commentary: After that, when the Supreme Lord was present, he established the authority (of the tradition), in the course of which the Supreme Lord was Oḍḍīśanātha and (also called) Maunīśanātha. He established a ninefold authority (wielded in the unmanifest sphere by) Indra, Mahān, Kāma, Bhāskara,

Garuḍa, Brahmā, Vāyu, Viṣṇu and Mārtaṇḍa and, in the manifest state, (by) Gagana, Kumuda, Padma, Deva, Bhairava, Kamala, Śiva, Rāma, and Kṛṣṇa. Thus making nine.

The ṢSS continues with the following long section. One wonders why this passage was omitted when virtually all the rest of the chapter has been reproduced here in this chapter of the KuKh.

The venerable goddess said:

O venerable lord (*svāmin*), by your grace I have heard about what you have done (*carita*). How did the venerable Siddhanātha perform a miracle (*kautūhala*) there? I want to hear about that, O great ocean of all knowledge. O man, I have not known more from anybody than you.

Śrīnātha said:

O goddess, fair lady, I will tell you first of all about that which is more secret than the secret. Listen, O you who are endowed with all good qualities. There was once a Buddhist known as Vajrabodhi who greatly despised (others). He was a logician and an envious man who, by (his own) reckoning (*buddhi*), was the equal of (a real) teacher. O goddess, he was originally born as Trivedin in Pauṇḍravardhana and, (also) called Trivikrama, he was learned in (Brahminical) theology (*devavidyāviśārada*). He went (to visit) the king on the island of Ceylon.

This Buddhist was an empty (man because of the) Buddhist doctrine (he followed) (*sarvāstivāda*). Wrathful, he gave (others not *Nirvāṇa* but rather) a fettered existence (*bhavada*). He wandered over the whole of the earth having vanquished many Deva Brahmins (in philosophical debate). And so (the people he preached to) beginning with the Deva Brahmins (thought that) the universe is (certainly) empty. And then that king made an effort and became the king of the place (*sthānādhipa*).

Thus the king and the Buddhist arrived at a cremation ground (where there) was an ascetic (*yati*).* He was sitting in the shade of a tamarind (*ciñciṇī*) tree immobile in meditation. (The king) worshipped (him but the Siddha) was in the supreme state of meditation and (so) the king was not able to rouse (this) excellent sage. Then the Bauddha, very proud because of his intellect and (full of) hate (for the Siddha) because (of his) anger, called out to the yogi constantly to awaken (him) and angered him with hard words and the (vain) prattle of logic. And (he tried to rouse him) with the sounds of great conches, kettle and double headed drums and, established in the (false) strength of Buddhist doctrine, he mocked the Kula teaching (*kulāmnāya*).

(Then) by the power of your Command, a disembodied voice spoke. (He) the king of yogis disturbed (the entire world by shaking his) index finger (and shouting) `hā hā hā'. Fire with smoke came from his nose, mouth and ears and so the king's entire army was filled with smoke. Then, paralysed by the fire of knowledge (all those who were there) were unable to flee and all around (were frozen as if) in a picture and, their hair dishevelled, trembled and, fainting with fear, fell on the ground. [...]. All the oceans were disturbed and the surface of the earth shook. There were great mountains there and the trees all around (on them) were broken. Apart from the tamarind tree (under which the Siddha sat) everything shook.

The Buddhist who had been made (so) proud (by his Buddhist) doctrine, fell senseless to the ground. By (the Siddha's) mere glance, the (entire) universe was disturbed. When the king saw that by (his) anger, which was like doomsday (*kalpānta*) (itself), the gods and demons were being destroyed, (this) lion of a king said (to Vajrabodhi): "what is this that has been brought about by (your) evil intellect?" Then, getting up, the wise king made a full prostration.

(He said:) "O Lord Nātha, be gracious! Be compassionate. Today you are the teacher of the universe, (all) living beings are only (immersed) in suffering. O

Nātha, give me the order (*ājñā*) by which I may be struck with wonder! You alone are the refuge of those immersed in the ocean of transmigratory existence. You are the only one in the three worlds who (operates) in creation, persistence and destruction. (You have) entered (this) plane of existence (*pada*) to help the worlds."

Thus that excellent sage was pacified by the king. He gave (the king) the command that gives rise to supreme bliss and then spoke again.

"Establish a great kingdom! Be the conqueror of the ten directions! Go, go, great king and establish a kingdom at my command! (But) if you break the rules (*samaya*) of the Kula path, the rays (of energy emanated by the angered deity) will do what is proper. The supreme goddess commands that if it comes about that there is any man in your kingdom who is devoted to anyone else (apart from the goddess Kubjikā), then all (this) will be destroyed."

(Then when) the vital breaths were connected (again) to Vajrabodhi,* (he said): "O lord and master (*nātha*), forgive (me for my) stupidity (*durbuddhi*), deluded (as I am) by the ignorance of folly (*madājñāna*). It is by your grace that I am linked by your will to the vital breaths (that vivify my body)."

Having said this, that fortunate being (*bhagavān*), Vajrabodhi, was (there laying) in front of (Siddhanātha) who, touching him on the head with the toes (of his) foot made (Vajrabodhi) get up. Then Vajrabodhi, who was fully of humility (*vinayānvita*), prostrated fully before him and said:

"O Siddhanātha, forgive me! O Lord (*nātha*), who are you? (Your) body is divine. O great treasure of all knowledge! I am blind with the darkness of ignorance. I do not know you, you who are without sin. Hail to you who can (only) be known by wisdom (*vijñāna*)! Hail to you who help all! Hail to you O lord who are beyond conception! He spoke thus to the sage before (him) to save (himself) from fear. (Siddhanātha replied): “O great soul! the one great ocean of wisdom! Go! Go! By the power of my Command you will be the benefactor of the universe. Ibid. 43/156-165ab.

The sage (Vajrabodhi) bowed (his) head to the sage Caryānātha who became silent and he, the lord (*nātha*) without sin, remained so.

The lord of the god of the gods, stayed there below the tamarind tree. (Other Buddhist) Siddhas came and of their own accord fell on Śrīnātha. Thus, O goddess, the lord (nātha) looked at then angrily and a magic ball (*guṭikā*) that (emerged) from (the sound) HUṀ (he uttered in wrath) made the Siddhas fall to the ground senseless. Distraught and worried that (they would be) struck (again) by the magic pill, these sky dwellers went (to take refuge) at Śrīnātha's lotus feet.

He consolled them saying: "Do not fear! Do not fear!" . Then, giving them permission (to do so) he sent them (back) into the sky. Thus, they, the most excellent troupes of Knowledge Holders (*vidyādhara*) attained Flight and astonished, O mistress of the gods, they said: "O see the unique glory of the lord (*nātha*) in the three worlds! He by whose word (*vācā*) men (*manuja*) become skyfarers!"

Thus, the sage established there a Circle of Mothers (*mātṛmaṇḍala*) and placed the goddess Ṭaṅkā (in it). Then, O fair lady, having installed at his own command a Siddhaliṅga, the sage went to Arbuda.

The venerable goddess said:

O great god! Beautiful one of the Kula tradition (*amnāya*)! O Bhairava! (now) tell (me) how the (spiritual) sons of the founder (*ādhāranātha*) attained authority and were divided into divine (*divya*) and human (*adivya*) (lineages).

The venerable Bhairava said:

O goddess, listen (as I tell you) the lineage (*santati*) of the Kula tradition of the great Siddhas. That teacher (*ācārya*) Vajrabodhi is known as Gaganeśa. The founder (*ādhāranātha*) remained again for a divine year in Arbuda and having imparted (his) Command (to him) along with (another) eight Nāthas, he again returned to the northern peak. Having (thus) received permission, Vajrabodhi maintained a position of authority.

Eight Siddhas have been mentioned. Listen to their names. There is Bherīnātha, Pippalin, (also) called Bāla, Goṣṭhīśa, Pulīśa, Aṅgamukha, Reḍinātha, Nirānanda, and the one called Koḍaura. These are the eight great Siddhas skilled in all (schools of) knowledge.

The one called Aparāditya was born in Ahicchatra. (He is) Bherīnātha (who) will be a Kṣatriya who destroys (other) Kṣatriyas. Another is Vīradeva, the best of Brahmins, born in Bhogapura. He is Pippalin Bāladeva who is known as Padmānanda. (Another) is a certain Śudra called Khaḍgavīra who was born in the town of Pāṭali. He is the valourous (*sāhasa*) Goṣṭhīśa known as the wise Devānanda.

(There is) the excellent Brahmin Keśavārka, born in Māyāpura famous as Gīta and said to be Pulīśa. He is Bhairavānanda and is called Bhramarānanda. He is known as Yakṣanātha who is said to be the one treasure of wisdom.

There is another who was born in Kanyakubja. (He was) a king who was said to be a Brahmin. (He was) the sage Vyomānanda who is known as Aṁganātha. He will be called Kamalānanda in the world.

(Another is) a Śūdra born in Alaṁpura who is called Bhīma. He will be Reḍinātha who is Rāmānanda, called Kūrma.

The Kṣatriya Aparāditya, the protector of all royal power (*kṣatra*) was born in a royal family in Ayodhya. He is known as Girinātha, famous as Kṛṣṇanātha. The intense (power of his) Command manifests within the world and (so he) is called Ānanda.

The excellent Brahmin Kṣamāditya, (also) called Khaparānanda was born in the town of Vardhamāna in the middle of the island of Cohāra. He was known as Kallola and was also named Koḍaura.

The founder (*ādhāranātha*) thus gave them (the power of his) Command in the prescribed manner. Intensely powerful (*tīvra*) and endowed with perpetual bliss, the divine (Siddhas) entered into the Island.

Ibid. 43/186-192.

Then the ṢSS continues with the verse that follows in our text.

32. All the MSs of the KuKh read the name of this place as Calampa or Lampa. MSs of the ṢSS read Alampura both here and in 43/187cd (see below). In the commentary on TĀ 29/61 Jayaratha glosses the name of the town Hālā as Alipura. Perhaps this is Alampura?

33. ṢSS 43/196cd tells us that the god referred to here is Tūṣṇīśa.

34. The three rays correspond, I suppose, to the three categories to which, as we shall see, the Nine Nāthas belong,

35. The ṢSS (43/203ab) adds: These are said to be the Child Nāthas (*bālanātha*) who illumine the middle celestial region. According to the ṢSS they are the first, the third and the fifth Nāthas.

36. The ṢSS says that they are the second, sixth and eighth and adds (43/205ab): These are said to be the Middle Nāthas who illumine what is external and internal.

37. Śrīsantānakula literally means ‘the family of the venerable lineage’. It is probably an expansion of the name Śrīkula, a common one for the Kubjikā tradition.

38. The division into three regions, earth, netherworlds and sky with three Siddhas each is standard in the later Kubjikā literature. However, there are a few discrepancies between the accounts as to which of the Nine Nāthas are ascribed to the three regions. Two of these sources are here in the KuKh namely, 7/70cd-73ab and 46/44-45. Two others are the ṢSS (43/201cd-205) and its commentary. A fifth source is YKh (2) 15/84cd-86 and a sixth KuKauM 1/90-91ab. These variants can be tabulated as follows:

20. Table of the Nine Nāthas in the Three Regions

YKh (2) 15/84cd-86, KuKh 7/70cd-73ab	1st, 3rd and 6th	2nd, 4th and 5th	7th, 8th and 9th
Location	South India	Netherworld	Sky
KuKh 46/60cd- 4ab	1st, 2nd and 8th	3rd, 5th and 6th	4th, 7th and 9th
Location	Supreme Abode	Kalpa village	______
KuKauM 1/90-91ab	1st, 3rd and 6th	2nd, 4th and 5th	7th, 8th and 9th
Location	Earth	Nether world	Sky
ṢSS 43/201cd-205	1st, 3rd and 5th	2nd, 6th and 8th	4th, 7th and 9th
Location	Sky	Kalpa village	
Lineage	Child	Middle	Eldest
ṢSS commen-tary	1st, 3rd and 6th	2nd, 4th and 5th	7th, 8th and 9th
Location	Earth	Netherworld	Sky

KuKh 7/73cd-4ab agrees with YKh (2) and the commentary of the ṢSS. They all agree with the KuKauM. The chapter of the KuKauM that deals with the teachers and their lineages is not as old as the KMT, which knows virtually nothing about them. It also probably post-dates the KRU which, although more developed in this respect than the KMT, has still not reached the systematic layout we find in the later sources. The KuKauM does not narrate the detailed myths of origin of the First Nātha we find in the the ṢSS but otherwise transmites the most detailed and extensive account of the lineages. Rudraśiva, the author of the*Ṭīkā*, who had both the KuKauM and the ṢSS before him, chose to comment on the account found in the former considering it, no doubt, to be more authoritative than the one in the ṢSS. It would appear that out of these variants, this one is most likely to be correct.

Finally, note that the earth region (*bhūloka*) is implictly identified in YKh (2) with the Deccan (*dakṣiṇāpatha*) to which it refers frequently as the area, along with Koṅkaṇa and the city of Candrapura, to which the Kubjikā tradition has spread. The ṢSS and the KuKauM focus on just the last two, indicating perhaps that YKh (2) was redacted later when the tradition had spread further.

39. The ṢSS adds the following here:

The sound teachings (*suniścaya*) of the Mahākrama are very powerful (*tīvra*), (indeed) extremely powerful. (These are) the depositions of the limbs and faces of the Command, Navātman, and the Samayā (Vidyā). (They are all) concerned with gracing and restraint and implimenting (*karaṇa*) emanation and withdrawal. The Self of these (Siddhas) illuminates (the world) by the light of the Śāmabhava Command. Such are (the lineages of) the Child, Middle One, and the Aged within the lineage of the Aged. They were made by Mūlanātha in order to grace the one who performs rituals (*kartṛ*). O fair lady, the Siddhanāthas are all fashioned from his own body.

40. This is the practice of concealing one's own true spiritual status by pretending to be mad. The Nātha who went to Candrapura behaved in this way (46/64cd-67). Cf. above (46/59cd-60ab) where the first Siddha is said to have been engaged in this practice.

41. The ṢSS then adds the following two lines (ṢSS 43/213cd-214ab):

O fair faced lady, having established the Kula tradition on the surface of the earth in accord with the division of the four Ages and various sites in order to (spread) the (deity's) glorious power.

caturyugavibhāgena sthānabhedair varānane |
kulāmnāyaṁ [k kh: -ya] vibhūtyarthe sthāpayitvā dharātale ||

The following passage up to 64ab is missing in the ṢSS; nor does it fit well here.

42. Below (46/123cd-127cd) we are told that the Nine Nāthas entered the City of Bliss after worshipping the Śrīkrama on mounts Śrīśaila, Pāripātra and Arbuda.

43. The following passage 46/64cd-122 is the same as ṢSS 43/45cd-107ab.

44. I suppose that the expression *raudrasandhyāṁśakāla* – glossed simply as *raudrasandhyā* – is the evening *sandhyā*. Rudra is associated with sunset from which are derived two epithets that commonly characterize him. One is *'nīlalohita'* – literally 'blue-red' and '*nīlakaṇṭha'* – literally 'blue-throat', both names inspired by the colour of the sky at twilight, especially after a storm.

45. Instead of 'the venerable Vṛkṣanātha is well know by the name Gaganendra' the ṢSS (43/48cd) says: 'He who is called Ādinātha is famous as Maunanātha.' Gaganendra is the first of the Nine Siddhas. Vṛkṣanātha, also called Ciñcaṇīnātha, is one of the names of the First Nātha. It is surprising, therefore, that our text equates him with the first of the Nine Nāthas. But this may be a change the redactor chose to make in order to be consistant with his own text constructed in large part by omitting and rearranging sections of his source, the ṢSS. Accordingly, I have chosen not to emend even though there appears to be an

inconsistancy here because the ṢSS says that the Nine Siddhas were the disciples of the Siddha who entered Candrapura.

46. The commentary on the ṢSS says:

Such was (the land of) Koṅkaṇa he entered on the third day of the bright half of Caitra at twilight (*raudrasandhyā*). Established in the `practice of madness' (*unmattacaryā*) and maintaining silence he is said to be the first teacher (*ādyanātha*). Just as a turtle hids its limbs in the same way he placed everything in (his) heart and abides thus. (He is) then called Kūrmanātha in the world.

tādṛgvidhe koṅkaṇe [k: kuṁkaṇe; kh: kvaṁkaṇe] caitraśuklatṛtīyāyāṁ raudrasandhyāsamaye [kh: -sanyāsamaye] unmattacaryāsthaḥ [k: -caryathā; kh: -caryayā] praviṣṭaḥ sa maunaṁ kṛtvā sthitaḥ ādyanāthaḥ ucyate || *kūrmaṁ [k: kūrmme] yathā aṅgāni gūhayati tathā tena sarvaṁ hṛdi kṛtvā vartate tadā kūrmanāthaḥ [k:-tho] loke gīyate* ||

A description of Koṅkaṇa just precedes this passage in the ṢSS and so the commentator has confused the land of Koṅkaṇa with the city the Siddha enters.

47. Candrabimba appears again in 46/142ab and 58/8d.

48. The ṢSS and commentary add:

Ū and AḤ are know as man. Ī and E are said to be woman. The (two) eunochs reside in the same place and are called Sthāṇu (ḷ) and Hara (Ḹ). The rest are said to be children. (Thus) the sixteen years (of Gaganāvatī) are said to be energies. Kuṇḍaleśvarī, the goddess with sixteen limbs, sports (thus).

Comm: The king there was Candrabimba, he had a daughter (called) Gaganāvatī. She was sixteen and was surrounded by sixteen attendants. Who were these sixteen? The letters Ū and AḤ are two men. The letters Ī and E are two women. ḷ and Ḹ are two eunochs. A Ā I U ṛ Ṛ E AI O AU AṀ are the young children. In this way, Gaganāvatī has sixteen attendants.

49. ṢSS (43/58a): 'he is in the middle of the Mountain of the Moon (*candraśilā*)' (*asti [k, kh: āste] candraśilāmadhye*).

50. The ṢSS (43/61cd) adds next: Then in the clear dawn (of early morning), her mind a bit confused (*tataḥ prabhāte vimale īṣadvibhramacetasā*).

51. Instead of 'the young woman went there to the hermitage where the Lord of Siddhas resided' the ṢSS (43/63ab) says: 'she was indeed sent there by the king, there to that Montain of the Moon (*preṣitā tatra vai rājñā [k, kh: rājā] yatra taṁ candraparvatam*).

52. The ṢSS adds here: As long as the Nātha, lord of the universe, resided on the beautiful lunar peak (*candraśikhara*) on top of the Mountain of the Moon (*candraśilā*), (he was immersed in) meditation (*dhyānayukta*).

53. Symplocos Racemosa.

54. See note to the Sanskrit text.

55. Compare the following passages quoted by Jayarartha in his commentary on TĀ 29/11-13:

It is said that Brahmins drink (wine) during the Sautramaṇi sacrifice. Ksatriyas (do so in the tumult) of a great battle. Vaiśyas (drink it) when tending their land, at great festivals and when friends and relatives come (to visit), while Śudras do so at the cremation grounds, at a wedding and at the birth of a son. O dear one, such is the variety (of occasions) to drink for those people whose minds are deluded. But those who are initiated in Śaṁkara's Tantra and the Devī Tantra, and are devoted to the command of the teacher, hidden and intent on the repetition of mantra and worship, skilled in science and knowledge, and possess great aspiration – for these twice-born ones, O dear one, (who do not do so) out of greed, (drinking) is never prohibited.

56. Jayaratha (comm. TĀ 29/11-13) quotes the following verse that appears also in KĀ 5/93, but is that is probably not its original source:

Even the Hero goes to hell who drinks wine without having worshipped the god Bhairava and (offered) the libation of mantra (*mantratarpaṇa*).

57. Utpalavaiṣnava in his commentary on the *Spandakārikā* quotes the *Tattvayukti* as saying:

The same terrible deeds by which men are bound are the means by which they are freed from transmigration.

And so too in the *Kulayukti*:

> It is said that that by which the living are cast down also elevates them; that which when unknown is binding, liberates once (rightly) comprehended.

> Utpala quotes himself as saying: That due to which a fool succumbs to suffering is the very means by which the wise man overcomes it. (Metal) rolled into a ball sinks, but fashioned into thin leaf, floats. (Dyczkowski 1992: 141-142)

58. Liquor *surā* – and grape wine – *madya* – are commonly offered together in the rites and so symbolically associated with one another in this way. In his commentary on the TĀ (29/11-13) Jayaratha quotes an unknown source as saying:

> Surā is supreme power (*śakti*). Madya is said to be Bhairava. Bhairava the Great Soul has made his own nature liquid. [. . .] Without that there is no liberation. Without that there is no path. Without that there is no success (*siddhi*) especially in the Bhairava Āgama. O great goddess, it bestows liberation and enjoyment on the one who has smelt, seen, drunk and touched it.

Similarly, the *Kaulāvalinirṇaya* (4/146-148) declares:

> By just seeing Surā one is freed from all sins. By just smelling it he gets the fruit of a hundred sacrifices. By just touching Madya he gets the fruit of a million sacred bathing sites and by drinking it he attains directly the fourfold liberation. The energy of the will is in the smell of Surā and the energy of knowledge in its taste. The energy of action, the means to purify the mind, is in its touch.

59. The MSs read *athāṣṭāṣṭakahīnānāṁ* which makes no sense.

60. Presumably, the City of Supreme Bliss in the outside world is Candrapura. Internally it is the Wheel of the Self-supported. I suppose the mouth of the Siddhas is the Teacher's Mouth (*guruvaktra*) also called the Unborn Mouth (*ajavaktra*) located at the End of the Twelve above the head. I read this passage directly after 46/63cd. If this is correct then the text here refers to the Nine Siddhas who first did the rounds of the Three Holy Mountains to finally return to the City of Bliss.

61. The reading in the ṢSS of this verse is not quite the same. Moreover, it is preceded by three extra lines. Read together, the ṢSS says:

> The venerable goddess said:
>
> O god, tell me, part by part about the three lineages (*aolitraya*) of the founders (*mūlanātha*) and those born amongst the Eldest, Middling and Last.

The venerable Bhairava said:

I will tell you about the innate pulsation (of consciousness) (*sahajaspanda*) within the (Wheel of) the Self-supported in bliss (*ānandasvādhiṣṭhāna*) of those who desire purification. (Thus I will tell you about) the sixteen (Siddhas) born in the lineage of (spiritual) offspring. Those born amongst the Eldest, Middling and Last (divided) into (two) groups, one sacred (*divya*) and the other human (*adivya*).

divyādivyavibhāgena svarasaṁkhyān [k, kh: -khyā] bravīmi te ǀ ṢSS 44/1-3ab
Another category is *itaretara* – 'mutual', which is mentioned below in 46/144.

62. The commentary on the ṢSS lists these names as those of the Sixteen Siddhas. Both the ṢSS and the KuKh list Kumuda (the fifteenth in the list). But Kumuda is missing in the commentary on the ṢSS, which reads Unmatta and Kaulārka separately in place of Madanomattakaulārka. The commentary reads Rudramātaṅga in place of Rudramārtaṇḍa and Uḍḍadeva in the place of Oḍradeva. One manuscript of the ṢSS has Oḍadeva and the other Udava. Oḍra, the ancient name for the region of Orissa, is the place where the goddess finally unites with Bhairava after her tour of India (see above end of chapter six and KMT in the note). The form Oḍradeva, therefore, is the regular form.

63. The sixteen Nāthas who correspond to the sixteen supports are praised individually below in 46/181-198ab. The ṢSS says that they are the Lords of the Supports, rather than the supports themselves, concerning which see 25/29-36ab. According to the commentary on the ṢSS, these sixteen are the rays of the deity (*ete raśmirūpāḥ*) and so are divine. Their human names (*eṣāṁ mānuṣyatve saṁjñāḥ*) are listed next. In other words, these sixteen belong to the 'divine' (*divya*) category while the following sixteen belong to the other one, the human.

64. The names of the Sixteen Siddhas are recorded in a number of places. They appear again below in 46/181-198ab and chapter 56 which is devoted exclusively to them. They are listed in the ṢSS and in the commentary. The commentary on the ṢSS confirms that in this list each of the Sixteen Siddhas has two names (*eteṣāṁ sarveṣām agre stotraṁ sthitaṁ nāmadvayānurūpeṇa*). The names in the common type face are the main ones. These are listed in the commentary. They are basically the same set of names found in the KuKauM. The KuKauM does not list the second of the two names but lists two others instead; these are the Siddhas' secret names (*guptanāma*) and those by which they are

worshipped (*pūjānāma*). According to the KuKauM (1/1-5) these are the *caryā* names of the Sixteen Siddhas. Their *pūjā* names are recorded above in 7/74cd-76ab and in the *Ṭīkā* (see ibid. notes). The list appears in YKh (2) (15/93cd ff.) as that of the sixteen human teachers (*puruṣa*). The variant forms of their names are recorded in the notes.

Both the YKh (2) and the KuKauM (1/4) declare that these sixteen great Siddhas possess authority in Koṅkaṇa. (15/92cd-96). Similarly, the three siddhas out of the Nine Siddhas who teach in the mortal world are associated with the Deccan (YKh (2) 15/83-85), more specifically Koṅkaṇa (ibid. 15/81). See above chapter 7/67cd-68ab.

65. KuKauM, YKh (2), ṢSS: Candrapūrya

66. KuKauM, ṢSS comm: Śrīprayāga; YKh (2), ṢSS: Śrīprayāsa also 56/7 but this name is confirmed below in 46/187.

67. KuKauM: Kauśala; YKh (2): Kāśālya.

68. The MSs of the ṢSS are corrupt here and so this entry is missing.

69. Missing in the commentary. KuKauM, YKh (2), 56/11: Khaḍgadeva.

70. KuKauM, YKh (2), comm. ṢSS: Rudradeva

71. Commentary: Vārāha. KuKauM, YKh (2): Dhārāśiva

72. Commentary, KuKauM, YKh (2), and 56/14: Mudrāsphoṭa.

73. Commentary, KuKauM, YKh (2): Vaṅkāpura.

74. YKh (2), 56/16: Bhurjadeva; KuKauM: Bhujasphoṭa.

75. We are told that there are seven Nāthas in the Lineage of the Eldest and the same number in that of the Child. However, only six are listed in each case. According to their serial order these are: 1, 2, 3, 4, 6 and 11 for the lineage of the Eldest 7, 8, 9, 10, 12, and 13 for that of the Child. The remaining lineage consists of Nāthas 5 and 14. Thus 15 and 16 are missing. In the first instance the MSs read '*cānyaṁ*' – 'and another', possibly with reference to the missing seventh Nātha of that lineage. In the second instance, where the remaining Nātha was probably mentioned, the MSs read: '*koṭipūrvaṁ*' – 'preceded by millions', which makes no sense and is clearly corrupt.

76. The arrangement of the Siddhas in the three lineages according to the KuKauM (1/158-163ab) is different. The first nine Siddhas, except the fifth, are the disciples of Gadeva, that is, Gaganeśa, the first of the Nine Siddhas (see above 7/76cd). These belong to the Lineage of the Eldest. The Middle Lineage consists of just the fifth Siddha. The remaining seven, that is, the tenth to the sixteenth, belong to the Lineage of the Child. This is the same set up we find above in chapter seven (7/76cd-78). But here there are seven Siddhas in the lineage of the Eldest, two in the Middle one and seven in the lineage of the Child.

77. The 'human' transmission is between a common human teacher and disciple. The 'mutual' one is between a sage and common human disciple.

Concerning the types of transmissions understood in these terms, see Dyczkowski 1992: 360 note 8.

78. Bahurūpa is Svacchanda Bhairava, also called Aghora. As Navātman Bhairava he is the god of the Kubjikā Tantra.

79. The thirty-five Nāthas are the Five Siddhas, the Five Nāthas of the sacred seats, the Nine Nāthas and the Sixteen Nāthas of the sixteen Supports. These groups are treated one by one below.

80. ṢSS: Śrīkriyāvvā.

81. According to the commentary on the ṢSS 44/21ff., these five are the consorts (*puruṣaśakti*) of Ādyanātha, Sadāśiva, Ananta, Śaṁkara and Śrīkaṇṭha.

82. ṢSS: Pañcakāvvā commentary: Campakāmbā.

83. The commentary on the ṢSS calls her Oḍāmbā.

84. According to the commentary on the ṢSS, these are the consorts of the next group of five Siddhas of the sacred seats, namely: Piṅgala, Mitranātha, Caryānātha, Ṣaṣṭha and Oḍīśa.

85. ṢSS: Svaravaktrāmṛtāvvā.

86. The ṢSS adds: These are said to be the nine consorts (*śakti*) of the Nine Nāthas.

87. ṢSS: Vīrajāvvā (Mother Born from Vīra).

88. ṢSS comm.: Mahālakṣmyambā.

89. The ṢSS adds: (These are) the consorts of the Sixteen Nāthas filled with all (things).

90. ṢSS: Arisen from the plane of omniscience and the rest of the current of Supreme Nectar (*paramāmṛtasandohasarvajñādipadodyatāḥ*).

91. Cf. above 46/11 ff.. Śrīnātha is Svayaṁbhū – the Self-existent – who is called Victory in YKh (2) 15/21cd-22 quoted in note to 46/29cd-30ab above.

92. This reading has been adopted from the ṢSS. The MSs of the KuKh read: *piṅgalaṁ vibhum* – the 'the pervasive Lord Piṅgala'. But this appears to be incorrect as Piṅgala figures below as the first of the Five Nāthas of the sacred seats.

93. The names of these five Siddhas are Śrīnātha, Sādākhya, Ananta, Śaṁkara and Śrīkaṇṭha. The commentary on the ṢSS tells us that the first two of these five are also called Ādyanātha and Sadāśiva. These Siddhas reside in the five forces (*kalā*) on the Path of the Forces (*kalādhvan*) and grace the beings who reside in the spheres of existence to which they correspond. This is the sublest of three Paths. The other two are the Path of the Principles (*tattvādhvan*) and that of the Worlds (*bhuvanādhvan*). The worlds are divided into groups that correspond to the metaphysical Principles to which they belong. Similarly, the forces are related to the Principles they contain. Thus Abhinavagupta explains:

Just as the common form that extends and is present in a given group of the aforementioned worlds and differs from one that extends through other groups is called a ‘Principle’ (*tattva*), similarly, according to Śiva's doctrine, a common form that extends and is present in a given group of Principles, which differs from one that extends through other groups is called, a ‘force’ (*kalā*). However, according to others, (a force) is a certain extremely subtle (*susūkṣmikā*) power that is present in the Principles (and sustains them), like the sustaining power (*dhārikā*) of the earth (that sustains everything on it). TĀ 11/2-4

The commentary on the ṢSS spells out the correspondences. The Force called Cessation (*nivṛtti*) contains the Earth Principle. This is governed by Śrīkaṇṭha. Foundation (*pratiṣṭhā*) contains the Principles that range from Water to Nature (*prakṛti*) and is governed by Śaṁkara. Knowledge (*vidyā*) consists of the Principles from the Person (*puruṣa*) to Māyā and the corresponding Siddha is Ananta. Tranquillity (*śānti*), that is governed by Sādākhya (i.e. Sadāśiva), includes the principles from Pure Knowledge to Power and Beyond Tranquillity (*śāntyatīta*) that consists of the Principle Śiva alone is that of Śrīnātha, that is, Ādyanātha.

94. *Pūrvapīṭham* may mean ‘eastern’, ‘previous’ or ‘first’ seat.

95. Is the Pentad of Kula the first five Wheels in the body? If so, the sixth Kula is the sixth Wheel, which is that of the Command between the eyebrows.

96. Concerning the crossroads of three and four paths, see above 14/59cd-62ab.

97. The Sixteen Supports are listed above in 25/29cd-36ab. The following section is a hymn in praise of the Sixteen Siddhas. They are called by their principle human name but usually either the name of their divine counterpart (listed above in 46/129-131) or their alternative name (listed above in 46/134-138) appears in some form in relation to each one. Occasionally both these names appear together. These will be signaled in the notes.

98. According to 46/129ab above the divine counterpart of Candrābja is called Piṅgeśa.

99. According to 46/129cd-130ab above Gulmanātha's divine counterpart is called Śveta.

100. The ṢSS 44/53 adds that Gulmanātha is white.

101. According to 46/134cd-135ab, Stambha is also called Śaktyānala (= Śaktyagni) and Krūrābhra (46/129) is the name of his divine counterpart.

102. Mativibhrama is the name of the divine counterpart of Karpāsa.

103. The divine counterpart of Vaṭasiṁha (also called just Vaṭa) is Ardhendu.

104. Madanonmattakaulārka is the divine counterpart of Virajeśa.

105. Concerning the Five Voids see 25/38-40.

106. Jaya is the other name of Pūpātmā and Kulabhāsakara is his divine counterpart.

107. Abhayānanda is the alternative name of Kāṁsāla, the human counterpart of Kauleśa.

108. Kulamātaṅga is the divine counterpart of Bhogadeva whose alternative name is Ratneśa.

109. Rudramārtaṇḍa is the divine counterpart of Śrībimba whose alternative name is Vimalānanda.

110. Most other sources read this name as Khaḍgadeva or Khaḍga (which literally means 'sword') instead of Tīkṣṇa (which literally means 'weapon') listed above in 46/137. His alternative name is Vijaya and divine counterpart Aghora.

111. Varāṅga is the Siddha of this support. His alias is Vīreśa and divine counterpart Caṇḍavega.

112. Śrīdhara is the Siddha here. He is also called Keśava and his divine counterpart is Ṣaṣṭhānanda.

113. Sahasa is an alternative name of Amalamudrā, also called Mudrāsphoṭa (see above note to 46/137cd-138ab). The divine counterpart is Khageśvara.

114. The commentary on ṢSS 44/74 explains this verse as follows:

The Supreme Primordial Lord (ādyanātha) sustains the body all around. How? By means of the form of the Krama, which is as follows. The four are the group of four sacred seats. The five are the Pure Pentad. The six are the Hexad of Grace. The half of eight is the group of four Siddhas. The group of five is the group of Five of Jewels along with the four, that is, the group of four Mothers (*ambā*). Thus making twenty-eight.

Then come the three, that is, the Triad of Vidyā which is in the middle of the triangle, namely, Ātmā, Vidyā, and Śiva along with that whose nature is will, knowledge and action. In the middle there is Navātman which is one. Samayā (Vidyā) which is the second and Vajrakubjī, the third.

The six (located in the hexagram) are the Hexad of Restraint which consists of Ḍa (for Ḍākinī), Ra (for Rākinī), La (for Lākinī), Ka (for Kākinī), Sa (for Sākinī), and Ha (for Hākinī).

The main group of eight (in the surrounding lotus) is the group of eight goddesses, Brāhmī and the rest. In this way the body is fashioned into the form of the Krama with all (its) parts (*prakāra*).

115. The commentary on ṢSS 44/75 explains:

> The pure knowledge of the Siddhas is this Kula wisdom made of gems that has been revealed in the venerable sacred seat, that is, the sacred seat of the Moon. It is has been revealed (beginning with the lineage of) Ānanda in six modalities (represented by the six Kaula lineages) namely: *1) Ānanda 2) Āvali 3) Prabhu 4) Yogin 5) Atīta and 6) Pāda. These are the six modalities (*ṣaṭprakāra*) the purpose of which is grace (*anugrahārtha*). The word `restraint' refers to the hexagram (formed by the six Yoginīs) Ḍākinī and the rest and to the eight petalled (lotus of) Brāhmī and the rest (of the Mothers).

*vyākhyā – śrīpīṭhe candrapīṭhe vimalajñānaṁ [kh: -na] nirmalajñānaṁ siddhānāṁ ratnamayaṁ [k: raktamayaṁ] kulajñānamayaṁ prakāśitaṁ ānandādyena iti ṣaṭprakāraṁ pradarśitam || yathā – ānandaḥ 1 || āvaliḥ 2 || prabhuḥ 3 || yogī 4 || atītaḥ 5 || pādaḥ 6 || iti ṣaṭprakāraṁ anugrahārtham || nigrahaśabdena [kh: -śavde *] ḍādyaṣaṭkoṇam [kh: ḍādyā-] || brāhmyādi [k: brāhmaṇādi] iti [k, kh: missing] aṣṭadalaṁ gṛhītam ||*

116. The commentary on ṢSS 44/76-77ab explains that the 'root' is Mūlanātha who is Navātman (HSKṢMLVRYŪṀ). Mother Kubjā is the mother of the family of initiates (*kulāmbā*). She is the Samayā Vidyā. It has been adopted (*gṛhītā*) by Śrinātha who is the eternal and omniscient Mūlanātha whose nature is consciousness.

In short, the text describes in a veiled manner the *Kramamaṇḍala* with its triangle and hexagram surrounded by an eight-petalled lotus with Navātman and the Samayā Vidyā in the centre. The Siddhas are arranged around it in four groups consisting of five, four, nine and sixteen Siddhas. These, along with Śrīnātha, make up the full set of thirty-five Nāthas. Together the teachers and their teaching constitute the Transmission. This is the Krama that is worshipped in the *maṇḍala* as the body of Śrīnātha and his consort the goddess Kubjikā who, in the centre, are enveloped by it and sustain it as does the soul the body in which it resides. Renewed Age after Age, the Transmission, that is, the teachers and the teaching, was transmitted in the world in the past. It is also transmitted now and shall be in the future. Thus the ṢSS (44/77cd-78ab) concludes:

And this, O mistress of the gods, is the Transmission (*krama*) of the four Ages) Kṛta, Tretā, Dvāpara and Kali in due order which will take place in diverse places and with diverse names in every Age.

etat kramaṁ ca deveśi kṛtredvākam anukramāt ǀ

117. ṢSS: This is all the supreme secret and the growth of fame (*kīrtivivardhana*).

118. Concerning the Nine Targets we read in the KuKauM:

O goddess, the (group of) Nine Targets, which is very hard to attain, is in the body. (They are) the genitals (*meḍhra*) and the Foundation, the navel, the heart, the throat, the (lower) uvula (*ghaṇṭika)* and the cavity (of the mouth) (*bila*), the (upper) uvula (*lambaka*), the cavity between the eyebrows and the Cavity of Brahmā which is the ninth. 1 + 2) The genitals and the Foundation have the form of a flame, brilliant like well heated gold. 3) The (target) in the navel is like the solar disc, brilliant like the newly risen sun. 4) The (target) in the Heart has the form of a flame and the one 5) in the throat has the form of the sun. 6 + 7) The (lower) uvula has the form of the flame of a lamp. That is said to be the form of the (oral) cavity (also). 7) The (upper) uvula, which is said to be above it, is like the moon. 8) (The Cavity) in between (the eyebrows) shines like a jewel and 9) the ninth (the Cavity of Brahmā) is cosmic radiant energy (*viśvatejas*). The yogi who is in these places should practice (concentration on the) Nine Targets. The targets are in nine places and so are also called the Nine Places (*navasthāna).*

119. The yogi should repeat the Vidyā of the goddess as he concentrates on the Nine Targets.

120. I suppose the expression Unborn not only alludes to the deity in general, but more specifically to the Face of the Unborn also called the Teacher's

Mouth located at the End of the Twelve above the head. Chapter 44 of the ṢSS ends here.

121. These places appear to be sixty-six. The bank of the Ganges is mentioned twice (the 56th and 66th place), corresponding, presumably, to two different places along it.

122. The Five Siddhas are listed above in 46/30cd-33ab (see note for more cross-references) and 46/162-166.

123. Parāpara- should perhaps be emended Parastīra but it involves making the sixth syllable long.

124. According to Monier-Williams, Pampā is the name of a river in South India.

125. The MSs all read *calabhyāyāṁ* that I have emended to *calatyāyāṁ*. But this is unsatisfactory. Perhaps the initial ca should be read separately.

126. One wonders whether to emend Śrīrājya to Strīrājya, even though none of the manuscripts attest this reading.

127. This subject is treated first in 46/106cd-121ab and then taken up again here. The lines 229cd-234ab appear in all the MSs after 46/26 above, where they are out of context and so have been shifted here.

128. Kaulism develops by a process of assimilation, internalization and elevation of the Kāpālika practice, which supplies the outer forms. The Kāpālika, Chakravarti (1972: 107) explains "attains to emancipation through the meditation on a supreme being residing in the female organ. He is adorned with garlands of human bones, takes his food from a skull, drinks wine from the skull of a Brahmin, worships Mahābhairava with human sacrifice, and offers oblations of human flesh to the fire." Like his prototype, the Kaula drinks wine. The Kubjikā Tantras extol its sacrality and power, not because it is a magic antinomian potion but because it is essentially the 'supreme' – i.e. spiritual – bliss it imparts to those who offer it to the deity and drink it. This is because it is the outer counterpart of the inner lunar nectar yogis drink. It flows from the body of the goddess as the blissful energy of Kuṇḍalinī. Kashmiri Tika Kaula exegetes internalize the source of this spiritual bliss further by identifying it with the activity of consciousness. Bliss is the innate nature of consciousness. Degrees of consciousness are experienced as corresponding degrees of bliss. This is the true form of deity. Bliss is sacred and that which stimulates its emergence shares in its sacrality. Thus Abhinava writes:

> Bliss is (essentially) the emerged state of consciousness (thus a substance) fit for the sacrifice is one that causes consciousness that is submerged to emerge (and expand). The body and the rest (associated with it) are (in a) submerged (state of consciousness) primarily because of the absence of consciousness. Thus that which generates bliss and is attractive to the heart is what is (most) fit for the rite of adoration (*pūjā*). It is for this reason that wine (*madya*) Kādambarī,

alcoholic beverages made of sugar cane (*śīdhu*) and the other such sacrificial substances are considered to be supremely powerful by the (higher Trika scriptures) such as the *Trikasāra* and the *Siddhāmata* that are beyond the Kula and Krama. TĀ 15/167cd-170ab

Lunar nectar has become consciousness. But this is not just abstract consciousness, it encompasses and includes the dynamism of perception. The two types of wine (see above, note to 46/118ab) – liquor (*surā*) and grape wine (*madya*) – now represent these two aspects of consciousness. Liquor made from rice, honey or sugar is 'artificial' compared to to the authentic wine made from grapes (46/301). The analogy fits well. The latter is the one undifferentiated, pure consciousness. The three kinds of the former represent the three polarities of the perception: subject, object and means of knowledge. Thus Abhinavagupta writes in his TĀ (29/11-13):

It is also said in the *Brahmayāmala* that liquor (*surā*) is the outer juice (*rasa*) of Śiva. There is neither liberation nor worldly enjoyment (*bhoga*) without it. Obtained from crushed rice (*piṣṭha*), honey (*kṣaudra*) and raw sugar (*guḍa*), (said to be) female, neuter and male, respectively, the previous (two) give pleasure to the last. The supreme energy (*tejas*) is born of the vine (the other three types of liquor are considered to be artificial, substitutes). It is Bhairava, free of thought constructs. That is, by its very nature, the pure juice (*rasa*) which is light, bliss and consciousness. It is ever pleasing to the gods and so should always be drunk.

129. Cf. below, 46/291 and 46/301

130. According to Monier-Williams Vāruṇī is: 'Varuṇa's female energy personified either as his wife or his daughter, produced at the churning of the ocean and regarded as the goddess of spiritous liquor.' Vāruṇī is also the name of a particular kind of distilled spirit prepared from hogweed mixed with the juice of the date or palm or it may simply mean any kind of liquor. According to the *Padmapurāṇa* (*bhūmikhaṇḍa* chapter 119) Vāruṇī is one of the four daughters of Varuṇa, the others are Sulakṣmī, Kāmadā and Śreṣṭhā. (Mani 1975:833). According to the MBh, she is also called Surā and was the daughter of Devī, his brothers wife. She was much loved by all the gods. The presiding deity of liquor, she lives in Brahmā's court and worships him (Mani 1975: 767, drawn from Sabhāparvan 2/42; Ādiparvan 18/35 and 66/52). According to the *Padmapurāṇa*, just cited, Soma, the Moon, created the pot of nectar that contains her, thus clearly connecting her to the moon. Within the body the uvula, which drips the lunar nectar, may be appropriately equated with this lunar jar full to overflowing with the supreme energy or digit (*kalā*) of the Moon. Thus, although the link is not clear, one wonders whether the uvula (*ghaṇṭikā*) is associated with the 'Place of

the Jar' (*ghaṭasthāna*). According to the commentary on ṢSS 2/28, it is the throat (*kaṇṭha*) or the cavity of the throat (*kaṇṭhakūpa*) (cf. KRP 7/4c: *ghaṭaṁ ca kaṇṭhakūpaṁ vai*). At the base of this jar is the Wheel of the Six Yoginīs that is associated with the element Air and Īśvara. The world is said to be contained in this jar; it is born from it and dissolves back into it. The Six Yoginīs who reside in the Six Wheels in the body are born from the water of this jar (KMT 15/48, for details see KMT 15/37 ff. and Heilijgers 1994: 119, 131, 135, 250 (n. 27)). The word *ghaṇṭikā* which literally means 'small bell' aptly denotes the uvula at the back of the throat which is shaped like a small, hanging temple bell. Only a small change is required to form the word *ghaṭikā* meaning 'small jar'.

131. Below in 46/300 the drop of wine is identified with the seventeenth energy of the Moon full of nectar. The red, rajasic wine replaces the white Vedic Soma and takes over, its vivifying, lunar qualities.

132. Concerning the goddess Surā, see below 46/253cd-256.

133. After the Siddhas and the others take leave of Śrīnātha and depart (see notes above), the Mothers and the Yoginīs other beings come to visit him. The ṢSS continues:

O goddess, I perceived the hosts there below the mountain. (They went there) in order to destroy the obstacles (that impede) the (progress) of the Siddhas who aspire to conquer the Kula accomplishment (*siddhi*). O beloved, I always play there on the peak of (the Mountain) of the Moon, in the company of the troupe of Śākinīs and surrounded by the eight goddesses.

O beloved, the group of eight that is there should be worshipped on the (night of the) full moon. Thus (the entire range of gods) starting with Brahmā and ending with Śiva is worshipped by offering a mere drop (of wine) on the peak of (the mountain of) the Moon. In this way (also), libation is offered to the troupe of sixty-four Yoginīs. (Thus) a powerful Command arises which frees one from all impurities.

Śrīnātha himself observes the injunction to worship the Mothers. Thus, before departing from the Mountain of the Moon: 'the sage (Śrīnātha) established there a Circle of Mothers (*mātṛmaṇḍala*) and placed the goddess Ṭaṅkā (in it). Then, O fair lady, having installed at his own command a Siddhaliṅga, the sage went to Arbuda'.

One set of sixty-four Yoginīs forms a part of the Khecarīcakra (described in KMT 16/1-109ab, ṢSS 25/1-159ab and ŚM 20). According to the ŚM, the Khecarīcakra is located on or above the head (Heilijgers-Seleen: 1994: 150), that is, on top of Kailāsa. The ŚM places the sixty-four Yoginīs in the Circle of Fire (*agnimaṇḍala*) which is described (differently) in the KMT (16/13-14).

134. Concerning the sacrificial use of wine, see Pandey 1963: 615-616.

135. Presumably, liquor is called *kumbhaka* because it is kept in a jar (*kumbha*), cf. entry 12.

136. This is a common name for wine and spiritous liquor in general produced by fermentation. Specifically, it is the liquor distilled from the flowers of the Kadamba tree.

137. Like Surā, this jewel was produced from the churning of the milky ocean. Viṣṇu wears it on his chest. See MBh, Ādiparvan 18/37 also the *bālakhaṇḍa* of Vāmīki's *Rāmāyaṇa* 45/39 and chapter 3 of the *Agnipurāṇa*.

138. This is the drinking vessel that contains the sacrificial drink and so, by extension, its contents.

139. A distiller or vendor of spiritous liquor is called a *dhvaja* and so, by extension, is what he produces.

140. See above, 3/115cd-116ab and note.

141. This is the goddess Raudrī, see 36/91cd.

142. This is a repeat of entry 12.

143. See note to 3/87cd-88.

144. This is a name of Kuṇḍalinī. See above 3/118cd-120ab.

145. *Vimala* is the thirty-ninth name for the sacrificial wine listed above.

146. Surā is a kind of wine made from the date palm (*vibhītaka*, *Terminalia bellerica*) The visualized form of the goddess Surā is described above in note 27 of chapter 33. Surā is red because she is in mensis. Her dark blue and red colour serve as a reminder that she is closely connected to the goddess Kubjikā who is also 'dark blue and red' when she emerges from the Liṅga (see intro. vol. 1, p. 43). The goddess Surā is Kubjikā because both are Kuṇḍalinī.

Note that the ‘great nectar’ identified with the god, is also said to be blue (see above 3/129).

147. This didactic etymology derives the word Surā from 'su-' short for '*surata*-' and '*ra*-' short for *rajasvalā*. Concerning the goddess's menses and her *ṛtu* she above, 3/33-34 and notes.

148. *Pārameśvara* is both one of the names of the MBT (cf 39/80ab) and the Kubjikā school as a whole (cf. KuKh 30/73cd, 117ab and 39/150). I suppose the latter sense is intended here. Wine is also identified with Śiva. See TĀ 15/69-75ab and 29/10 ff.. Cf. above 3/117 and note.

149. The hand is also moved three times around the *maṇḍala* at one point during the rite of initiation (see 11/26-28ab). In that case the clenched hand is rotated in an anti-clockwise direction – ‘to the left’. This is probably the direction in which the cup should be rotated also.

150. One can observe another way of holding the cup of sacrificial liquor offered in the couse of *pañcamakārapūjā* performed late in the evening at the Vaṭukabhairava temple in Vārāṇasī. There it is held between the extended thumb, forefinger and little finger. The small cup, filled to the brim with liquor, is first elevated, shown to the deity, touched to the forehead and then the contents are drunk in a single gulp. In this case the cup is held with the two middle fingers and thumb of the left hand, clenched together around it, with the index and little finger extended.

151. The sacrificial pap (*caru*) that energizes is meat.

152. The sense of *vikalpa* here is more akin to what would be called doubt in English. *Vikalpa* also conveys the sense of 'option'. The thought or doubt whether one should or should not do something vacillates between options engendering binding thought constructs (see 46/287-288ab and note). The adept who offers wine should be free of this unneccasary movement of the mind, sure that even though the consumption of alcohol is normally prohibited, that is not the case when offered as a Kaula substance (*dravya*).

153. See below, note to 46/290.

154. This word is not in Monier-Williams’ dictionary but Jayaratha explains: *vicikitseti śaṁkā* (TĀv on 12/19ab). Concerning ‘doubt’ (*śaṁkā*, *kampa*) see note to verse 46/287-288ab.

155. Harṣadeva, the Lord of Joy, is wine or spiritous drink in general (46/120-121ab). I have translated the attributive compound *harṣavihīna* literally as referring a person ‘who does not possess joy’, although it can just as well be translated as one ‘who does not possess wine.’ Note that the common meaning of the word *harṣa*- is ‘a bristling (esp. of the hair in rapture or delight)’ and also ‘erection of the sexual organ.’ In other words all four aspects of the spiritual condition of the Kaula adept are implicit in this term for wine, namely, joy,

rapture experienced in a state of wonder, inebriation and sexual arousal directed at a spiritual goal. Such indeed are the dimensions of the Kaula's mystical flights.

156. Abhinava sustains the view that impurity is not an objective reality. All things, whether considered to be pure or impure, are made of the same five gross elements. The distinction between pure and impure is not objective, it is simply a notion (see above, note to 46/267). Abhinava refers to a number of authorities that support this view. One is the the *Sarvācāratantra* quoted by Jayaratha (TĀv on 12/24):

> The deluded man is overcome by doubt because of ignorance and from that (proceeds the cycle) of creation and destruction. All mantras are letters by nature and all letters are Śiva. Water is said to be (of two kinds) drinkable and undrinkable. What is made of earth (may be either) edible or inedible, beautiful or ugly – all that is said to be Fire. Wind is said to be either pleasing to the touch or unpleasant. Space is said to be a `cavity' (*chidra*). The liquid offering, the one who offers it and the one who receives it – O goddess, everything has the fivefold nature (of the elements) (nothing) anywhere devoid of that may give rise to desire. (So) where and how can there be (any) doubt (about the purity or otherwise of anything)?

The *Niśācāratantra* says: 'Doubt is born of thought and doubt is of the nature of bondage. There is no other bondage apart from the doubt born of thought' (ibid.). Abhinava quotes the *Rātrikula* as saying: 'Liberation is the result of the destruction of doubt' (TĀ 15/593ab).

157. The same verse is found above as 37/68. I have translated the expression *ekapātraṁ na kartavyam* as 'one should not dine with others (who belong to a different tradition)'.

It may appear surprising at first sight, but is nonetheless true, that Kaula schools display a marked tendency to exclusivity. This is enforced in the same way in which caste distinctions are maintained, that is, through the rules governing ritual purity. Contact with others entails a transfer from one person to the other of substances which are in varying degrees polluting according to the manner of their transfer, their nature and that of their source and recepient. Caste status relates to the nature of the source and the recepient. As higher castes are purer than lower ones, they are liable to be polluted by them and so should avoid contact with them. As eating together entails ingesting substances, that occasion is one in which the contact is most intense. Accordingly, acceptance or otherwise of food, raw or cooked, or even just water, is a universal marker of relative caste status. The latter is determined by the degree of purity conferred upon an individual by the initiatory rites to which he has access in accord with his birth. The condition of any initiate, including a Kaula one, is analogous even though access to the intiation that purifies him does not depend on birth. The ritual purity a Kaula initiate enjoys entails the existence of the same gradient along which impurity travels between himself and those of other (and hence invariably lower), traditions as that between members of different castes. Accordingly, the interdiction is extended to commensality with members of other traditions, even if they belong to the same caste. Thus, typically, the JY substitutes initiatory status for caste and warns the Kaula initiate:

Contact with people who do not belong to (the same) Kula leads to a fall from that Kula. O (goddess) praised by the Kaula heroes, in the Kula tradition (that enjoins) eating together (only amongst members of the same Kula), one should never do otherwise if one desires the best for oneself or accomplishment, a long life and meetings with the Yoginīs. (If one desires) the Yoga (which is knowledge of) the past and the future and the contemplation that destroys the phenomenal (fettered state), one must streneously avoid eating with them and gatherings (with them) for drinks. One should avoid talking with them, what to say, O beloved, of touching (them).

teṣu saṁbhāṣaṇaṁ varjyaṁ saṁsparśaṁ kiṁ punaḥ priye || JY 4/20/140cd-143

We may also understand this interdiction to refer to eating together with members of other castes. The initiatory status of a Kaula applies exclusively only when he is engaged in the rites. In daily life he is both a member of a caste and a Kaula. The latter condition does not cancel out the former but neither is it entirely lost, although the pious Kaula householder is dominated in his daily life by the observances required by his caste status. Caste and the distinctions it entails cease only when initiates gather together (46/268). However, when they separate and re-enter the everyday world, each one resumes his previous caste status. Thus in the YKh (1) we read with regards to drinking the sacrificial wine together:

Established in the intellect of supreme bliss, the four castes are one. Having (drunk together) the uncorrupted (sacrificial) drink (all) castes are (again) separate (from one another).

paramānandabuddhisthāś [k, kh, gh: -sthā] catur varṇāni [gh: catuvarṇāni] caikataḥ ||
paścān na dūṣitaṁ pānaṁ kṛtā varṇāḥ pṛthak [kh: vṛthak] pṛthak |
YKh (1) 5/55cd-56ab

The same principle is applied in other Tantric traditions as well. Thus, for exmple, Bhairava instructs in the SvT (4/545ab): 'O goddess, a man requires purification (*prāyścittin*) for (even) mentioning his caste prior (to his entry in the circle of initiates).' But although this is the general norm, which is accepted on the whole by the Kubjikā tradition as well, in some cases, it is not consistantly followed. Thus commenting on a different verse, the *Ṭīkā* explains the same expression differently in the context of the etiquette initiates should observe when consuming sacrificial food (*caru*) together. Although teachers and disciples eat together the rite is designed in such a way that they may avoid commensality. The vessel from which they eat is ritually purified each time by covering it with the hand locked in a ritual gesture. This also serves to isolate it and prevent the transfer of pollution. The *Ṭīkā* outlines the procedure as follows:

(It is said): 'One should not cause (more than one disciple to make us of the) same vessel (*ekapātraṁ na kārayet*) (at a time)' when eating from the *argha* vessel of the sacrificial food (*caruka*). How should one eat from that *argha* vessel? (One should do so) with a (ritual) gesture (*mudrāyukta*). The gesture (is as follows). Place the left hand, facing down, in the form of a cover, on top of the *argha* vessel (along) with the right hand. Placing the ring finger of the left hand there in the middle of the *argha* vessel, consecrate it with the mantra of one's own lineage. The meaning is that one should consecrate the vessel (saying) AMBE SIDDHE GHORE along with the Vidyā of one's own lineage, that is, the one amongst the aforementioned (lineages of) the Eldest, the Middling and the Youngest which is one's own (*ovallikrama*). Then, holding the vessel in the middle of the right hand and, having clenched the fist of the left hand, extend the little finger. Once that has been done, place that little finger in the vessel. Then holding the vessel (in this way, part of the contents) should be consumed (*āhāraṇīya*) all at once immediately. The point is that it should not be placed on the ground again. What remains should be given to the junior (disciples). One should not take that vessel (and eat from it) again (a second time).

159. Cf. above, 46/238cd-239.

160. *dhāritā kaṇṭhe* literally `kept it on the throat'.

161. Abhinava praises the wine that Kaulas drink in a similar way:

> (This is) the wine that imparts boldness to the words of lovers and frees from fear while making love; the wine in which all the deities (of consciousness) who reside in the shade of the tree of the Kali Age and practice mystic union (*cakracaryā*) gladly abide; the wine which here (in Kashmir) bestows first pleasure and then liberation. TĀ 37/44

162. Common norms prohibit copulation with a woman in menses. According to the Law Books (*dharmaśāstra*) a woman's monthly issue is a mark of sin from which the woman is in this way regularly cleansed. Thus a woman in her menses is one of those women (like common prostitutes) who should not be approached (*agamyā*) (Baudh. 2/2/4/11 and Nārada 12/73 ff.). Talking with her, indeed even her mere glance, is polluting and so she must be kept away from food for human consumption and, especially from food that is offered to the gods and the manes (Manu 13/127/13; 13/92/15; 13/104/40). Meyer (1971: 225) writes:

> Sexual intercourse with the still unclean woman is strictly forbidden. To have connection with a woman during the monthly flow is reckoned among the dreadful crimes set forth in Arjuna's formula of self-cursing. To visit a *rajasvalā* (menstruating woman) is one of the seven things whereby a man forfeits his happiness and long life and Brahmins who thus fall appear as sinners.

None of this applies when the woman is a goddess. Indeed, on the contrary, when she is in her menses she is especially sacred and pure. We have seen, that 'surā', red wine, is symbolically equated with the menses of the goddess (note to 46/256). It is also the sexual fluid generated in the 'beautiful Wheel' of the Yoginī. The goddess Surā manifests in this form during Kaula ritual intercourse. She is the red menses of the Yoginī who couples when she is menstruating thereby filling her partner with pure divine Light and bliss.

163. See above note to 46/237-238ab.

164. See 6/90cd-92ab and note. This verse explains the deep, spiritual nature of the three 'Ms', namely *madya* – wine, *maithuna* – the fluids produced by sexual intercourse and *māṁsa* – meat. Inebriated with the bliss of the wine he drinks by means of Yoga, the yogi is instructed to consume the two breaths, the inhaled breath and the exhaled breath, which are the gross, outer manifestations of the Sound (*nāda*) and the Drop (*bindu*) by conjoining them. This is the meat the yogi eats. Nourished, strengthened and energized by them, he applies himself to attain the supreme state. This is the union of Śiva and Śakti, the individual and the universal and with them all the opposites. This is the supreme form of sex (*maithuna*) and it is the supreme state the initiate attains by uniting with his partner, a state which is his partner's inherent nature. These are the three Ms in their highest, most authentic form.

The KVN (8/95-6) says:

Wine (*surā*) is Śakti. Meat is Śiva and the one who eats it is Bhairava himself. The bliss that arises by the oneness of these two is said to be liberation. Bliss is the nature (*rūpa*) of Brahman established in the body. Wine is the one that makes it manifest which is why yogis drink it.

165. Presumably this mark (*tilaka*) is made in between the eyebrows with the sacrificial wine and then contemplated as the Bhairavī of the Drop.

166. The word *vikṣepa* literally means ejeculation

NOTES OF THE TRANSLATION OF CHAPTER FORTY-SEVEN

1. Concerning the worship of Vaṭuka and his mantra, see above 11/33cd-34ab. Vaṭuka (Child) Bhairava is often identified with Skanda-Kumāra who has, like the Vaṭuka described here, six heads. In Kaula sources and in his mantras Vaṭuka is regularly praised as Skanda normally is, that is, as the son of the goddess (*devīputra*). Three chapters of the KuKauM are dedicated to the worship of deities on the lunar days. The sacrifice offered on the sixth lunar day of the bright fortnight is dedicated to Kumāra (i.e. Vaṭukabhairava). He is worshipped along with his consort (*śakti*) in the middle of four attendent Vaṭukas who sit on lotuses in the primary quarters and four maids (*dūtī*) in the secondary ones. Vaṭuka here sits on a peacock, which is Skanda's vehicle.

Vaṭuka is said to be in the middle. Now listen to (a description of his) form. Brilliant like heated gold, he has six faces and sixteen arms and is seated on a peacock. He has beautiful hair and speaks pleasantly. He shines with the necklaces and bracelets (he wears). A sacred thread hangs on his shoulder.

The seven Mothers are born from the god as aspects of the power of his will (*icchāśakti*). Vaṭuka, also called Vīrabhadra, who precedes them and Gaṇeśa, who follows after them, arose out of them. In the following visualization found in the ŚM Vaṭuka, the 'son of the goddess', is identified with Vīrabhadra:

He has matted hair tied up on top of his head with a snake. The god has a pleasing face and divine, auspicious eyes. A beautiful and divine palmleaf is on his left ear. Lambakarṇa serves as the ornament for his right ear. He has two arms and holds a *vīṇā*. He has a snake as a sacred thread. The right leg is lifted up and his left thigh is bent. A cloth (covers him) tied to his right knee. O Supreme Goddess, there are gold bracelets on both (his arms) and a snake. Naked and ithyphallic he stands on a great royal throne. One should worship (him), the son of the goddess, as Vīrabhadra by name.

Vaṭuka is worshipped along with Gaṇeśa, the line of teachers, Yoginīs, and the Guardian of the Field (*kṣetrapāla*) and animal sacrifice is offered (*balikṣetreśa*). Their worship is normally prescribed in Kaula ritual. Thus the late *Kaulāvalinirṇaya* warns that without offering this *bali* the Kaula worship of Caṇḍikā is useless. There Vaṭuka is described as follows:

(Vaṭuka) carries a skull and wears an earring. He holds a staff and, dark blue like the young night, he wears a serpent (*vyāla*) as a sacred thread. The Lord (*nātha*) Vaṭuka who gives accomplishments to adepts and removes obstacles to worship, the rule and the tradition (*krama*), is victorious. KVN 6/120

The 17th century Bengali, Kṛṣṇānanda describes Vaṭuka in the *Tantrasāra* as:

. . . a boy whose complexion resembles the colour of crystal and wears two earrings. He holds a manuscript and wears ornaments of nine kinds of gems, such as bells or tinkling ornaments (*kiṅkiṇī*) and anklets. He has a shining appearance, white clothes, pleasent face and three eyes. He holds a trident (or spear) and club in his hands. D.C. JAIH VI, 1-2 p. 243.

2. The visualized form of the Guardian of the Field according to Kṛṣṇānanda's *Tantrasāra* is as follows:

Kṣetrapāla bears the moon on his matted hair and has three eyes. His complexion is blue like a mountain of blue collyrium and he wears ear-rings of coiled serpents in his ears and a girdle of bells attached to it. He wears red garlands, uses red scented ointment, wears red clothes and holds a mace and skull. The bells attached to his waist-band make a terrible sound. D.C. JAIH VI, 1-2 p. 201.

3. After the teacher has initiated his disciple he must give him a name. In order to do this the teacher draws a triangle containing the fifty letters, each of

which corresponds to a name. The disciple then throws a flower onto the triangle and his initiatory name is determined by the letter on which it happens to fall. In the following passage the names corresponding to the letters are listed for this purpose.

4. All the manuscripts continue to the end of this chapter with a passage concerning the rules an initiate should observe. The same passage is also found above in chapter 37 (from verse 2 to the end) where it has been retained.

Appendix I

The Sixteen Consecrations of the Command

The First Consecration of the Command – The Little Sleeping Man

The extended version of the *Saṁvartāsūtra* with which the ṢSS and KuKh begin refers to the Sixteen Consecrations of the Command (*ṣoḍaśājñābhiṣeka*) but neither of them say anything about it. The *Ṭīkā* begins its exposition by quoting the first quarter of four and a half verses of a passage it quotes in full as a conclusion of the exposition in which the sixteen consecrations are listed (*Ṭīkā* fl. 82a). The *Ṭīkā* draws from two sources: the ṢSS and the *Bṛhadāgama*. As it is not found in the former, it is probably drawn from the latter. If so, the *Brhadāgama* is probably the source of these rites.

The first consecration is called that of the Little Sleeping Man (*svapnamānavaka*). After the preliminary cleansing rite the disciple retires to sleep on a specially prepared bed. The following morning he tells his teacher his dreams who determines whether they are auspicious or otherwise. This procedure is common to Siddhānta rites of initiation where it is a part the preliminary purificatory rites (*adhivāsana*) along with the placing of Śiva's hand on the disciple's head,[1] which here is the second consecration.

The Little Sleeping Man is a deity who presides over sleep. He is described as follows in Siddhānta texts: 'The Little Sleeping Man is brown (*piṅgala*) and bears the Half Moon in (his) matted hair. He holds an ascetic's staff and trident and makes wish-bestowing and fear-dispelling gestures.'[2] The Little Sleeping Man is also the name of the mantra that should be repeated whilst falling asleep and is recorded in Böthlink's dictionary as a 'charm used to evoke dreams.' According to the SŚP one form of this mantra is:

> OṀ HILI HILI Bearer of the Trident, SVĀHĀ! OṀ! O Śambhu, three-eyed one, brown one (*piṅgala*), great soul, beautiful one (*vāma*), the All, Lord of Dreams, salutations! O Lord of the gods, I stand before you in supplication, tell me in (my) dream all the things that should be done that reside in my heart![3]

We turn now to what the *Ṭīkā* says: 'The (consecration of) the Little Sleeping Man is the first.' The sixteenfold consecration is performed (beginning with this one, namely that of) the Little Sleeping Man, which is as follows. (The consecration of the Little Sleeping Man) takes place after the preliminary purificatory rites have been performed.[1] The place where the disciple sleeps[2] in the sacrificial pavilion (*yāgamaṇḍapa*) is smeared with the Five Nectars along with wine. The place is sprinkled with the liquid (*udaka*) of the sacrificial vessel containing the Five Nectars. It is done (by the teacher) with the Weapon of his own Vidyā. Then it is enveloped with the Armour of his own Vidyā. The disciple's bed should be made there on the ground. Facing east, he should cause the disciple's topknot to be tied with the Samayā Vidyā. Then the bed there should be enclosed (*veṣṭayet*) with white mustard and orpiment (*gorocana*).[3] (The teacher) should imagine as (he moves) around (the bed) in a clockwise direction that there is a mass of weapons there (around it protecting it). Then it should be enveloped with the Armour.[4] Then the teacher should go out at the time of the initial purification (*adhivāsana*) hold a substitute (*parikalpita*) animal offering (*bali*) in (his) hand and throw it in (all) directions beginning with the east and ending with the north-east. With what mantra?[5] (The mantra is):

[2] *Aghoraśivapaddhati* p. 301 quoted in SŚP II, p. 219
[3] ibid. p. 218-220

---

[1] The text reads *adhivāsanakṛte sati*. As *adhivāsana* is the second consecration, *adhivāsana* should be understood in a non-technical sense simply as purification. These rites are described further ahead.

[2] The procedure described in the TĀ, SŚP and related texts require that the teacher sleep and dream also. This is not mentioned here.

[3] *Gorocana* is yellow orpiment made from the bile of cows

[4] The SŚP distinguishes between the householder neophant and the renouncer (*yati*). The bed for the former should be made of *darbha* grass, the head of which should be facing east. That of the latter should be made of ashes and head facing south (SŚP II, p. 216, verse 52-53). The place where the disciple sleeps should be carefully prepared and protected with mantras. As Brunner writes: ‘every precaution is taken so that nothing disruptive may trouble the disciple as he sleeps. He sleeps in the pavilion as in a citadel that is heavily guarded.’ (ibid. p 218).

The outer procedure described in the TĀ (15/474b-478) is less complex but adds an inner one to it. The teacher worships Śiva and projects the protective mantra PHAṬ onto the bed. When the disciple lays down on it, the teacher projects mantras onto him. Then, after the disciple falls asleep, the teacher regulates his breath so that it is consonant with his breathing. Thus, when the teacher inhales he penetrates the Wheel of his disciple’s Heart with the Moon of his *apāna*. When he exhales, he penetrates the End of the Twelve (*dvādaśānta*) above the disciple’s head with the Sun of his *prāṇa*. In this way he transmits the illuminating energies in his breath to the disciple as he sleeps and the dreams he has can serve as a means to prognosticate the good or bad outcome of the rite.

This is the prescribed procedure (for the offering of) *bali*. Here, in (this) *bali* worship, NAMAḤ should be added to the end of SVĀHĀ. Then the *bali* should be thrown upwards and (also) offered to all including outcastes and the like (*svapacādi*). Then, after the mouth has been rinsed, the sixfold deposition and the rest should be done. The teacher offers food along with spiritous drinks (*mahāsava*) to Vaṭuka.[1]

Then the teacher performs the depositions and the rest and, as before, the rite of protection (*rakṣā*). Then he should cause the disciple to sleep near him while he is absorbed in concentration and divine meditation. Then, in the morning, in the teacher's presence, (the disciple) describes what he has dreamt. Then once (the disciple) has saluted (the teacher, the teacher) tells (him) whether it is auspicious or inauspicious.[2]

Auspicious Things Seen in a Dream

(The following are) auspicious dreams: (The sight of) Indra, wine (drinking) and meat eating, smearing the body with insects and feces, sprinkling (of the body with) blood, eating of yogurt and boiled rice, covering the (the body with) white cloth, smearing (the body) with white (paste), a white umbrella above

[1] According to the SŚP (II, p. 216 verse 51), the teacher makes a rapid (*saṁkṣepataḥ*) *bali* offering outside the pavilion to the guardians of the quarters (*lokapāla*) before the bed is prepared. The more elaborate procedure and the offering of alcohol is due, no doubt, to the Kaula influence on the rite.

the head, a garland of white (flowers) as an ornament, a throne, a chariot, (any) vehicle, a flag, a king's consecration, ornaments for a chariot, beetle, fruit, a vision of the (the goddess) Sarasvatī and the embrace of an auspicious woman. One who converses with kings, enemies, gods, Siddhas, Vidyādharas, the hosts and teachers in the dream accomplishes everything.[1]

(Other auspicious things seen or done in a dream are) crossing over a river or the sea, flying, sunrise and a burning fire. (It is auspicious if) he sees planets, constellations, stars or the moon. (It is auspicious if he sees himself or others) ascending onto a planet, a palace or a mountain peak, mounting an elephant or a bull, climbing onto a ship, tree, or a mountain. (It is auspicious if he dreams that he is) travelling in a flying machine (*vimāna*). (It is auspicious if in his sleep he has) a vision of an accomplished mantra, acquires (something), (sees) the sacrificial pap Siddhas (eat), the destruction (of demons) wrought by the goddess, the alchemical pill (*guṭikā*), a stick to clean the teeth, a sword, sandals, orpiment, a sacred thread, collyrium, nectar, mercury, the alchemical herb (*mahauṣadhi*), a Tantric consort (*śakti*), an ascetic's pot, lotus, rosary, mind stone (*manaḥ – śilā*)(?), burning sacrificial substances used by Siddhas, (the range of) minerals up to ocre – he who sees these in a dream is successful and acquires territory (*kṣitilābha*) (in battle).[2]

(Other auspicious things are) crossing an ocean of blood in battle, victory in battle, a burning cemetary (*pitṛvana*), a Kaula adept (*vīra*) surrounded by (other) Kaula adepts, Vetālas and Siddhas, the selling of human flesh and beef, the sectioning of a human sacrifice, worship of oneself, the repetition of mantra, meditation, the burning of fire offerings while singing a hymn or the worship of fire as enjoined (by the scriptures). (The sight of) a wild gander, water bird, Cakravāka, peacock or a corpse. (He who) mounts them is successful. (He is) certainly successful if he sees Bhairavī in a dream in the company of the Bhairavas, Mothers and hosts of Mothers and Rudras. These, the auspicious (dreams) have (thus been) listed.[1]

Inauspicious Things Seen in a Dream

Now the inauspicious (things seen in a dream) are said to be as follows. Oil massage, drinking of oil, entering hell, falling into a pitch–dark well, sinking into mud, (falling from) a tree, waterfalls, a house or a (tall) building. The cutting of ears, nose, hands or feet. The falling of the hair or teeth. The sight of a monkey, bear, Vetāla, Yakṣa, Rakṣasa and similar beings and the sight of the Man of Death (*kālapuruṣa*). If a man embraces a woman in a dream who is black, whose hair is tied up, dirty, who wears black clothes or a garland of black (flowers) and has red eyes will die if a pacificatory rite (*śānti*) is not performed. There is no doubt about it.[2]

(Other inauspicious dreams are) the destruction of a house, palace, bed, parasol or seat, defeat in battle and one's own kidnapping by Rudra. (It is inauspicious to dream that one is being mounted by a) donkey, camel, jackel, crab, vulture, crow, owl, buffalo and the like. The eating of cooked meat. Smearing the body with blood and filth. The wearing of red or black clothes. Seeing oneself deformed. Laughing, rolling around, wearing a garland, the cutting of one's own flesh, the binding of one's own body, (seeing oneself) being eaten by a black snake or a quarrel. These are inauspicious dreams. The (description) of auspicious and inauspicious dreams is thus complete.[1]

In order to know (if the dream is auspicious or not), once the disciple has saluted the teacher at dawn he should tell (it to him). If the dream (the disciple) has is auspicious, the teacher tells (him so) in front of the Krama. If it is not, the Śikhādūtī mantra has to be repeated 1000 times with 108 offerings to the fire in order to destroy the bad dream. (The mantra is):

AGHORE HRĀṀ THAGHORE HRĪṀ GHORE GHORATARE HRŪṀ PHREṀ SARVATAḤ SARVASARVE HREṀ NAMAS TE RUDRARŪPE HRAḤ[2]

Prognosis by means of a Stick

Then one should perform the rite of protection (*rakṣā*). The first thing that should be done here is the rite of the stick for the teeth and then (the rite of) the Little Sleeping Man (comes next) when going to bed at night. The procedure for the (rite concerning the) stick for the teeth is as follows. The wood (of the stick) can be that of a Jāta, Vipada, or Bakula tree or made from mango or other wood that comes from trees that give tranquility, fulfillment and good fortune. The stick for the teeth should be round and twelve fingers long. It is the thickness of the little finger.[3] When should it be used?[1]

[3] This stick is used like a tootbrush to clean the teeth. According to the SŚP (1/11-14): (A stick) that is still green, with its bark, (cleanly) cut, straight, without knots and the size of the little finger is enjoined to clean the teeth.

It (should be) eight fingers (long) for those who aspire to liberation and (should be made from the wood of the following trees): Ciribilva, Karañjana, Śirīṣa, Khadira and Arjuna. It (should

At the beginning of (the consecration of) the Sleeping Man, (the teacher) should fashion three *maṇḍalas* with liquor (*ali*) outside the sacrificial enclosure, that is, outside the building where the sacrifice is performed (*yāgagṛha*) to the north of the sacrificial *maṇḍala*. They are made in the morning at the end of the rite (*arcana*). There, in the first *maṇḍala*, one must drink the Five Nectars of the five products of the cow. Then he should eat the sacrificial pap (*caru*) in the second. Then, in the third *maṇḍala*, the teeth are cleaned with the stick to clean the teeth. Having done that one should throw the stick for the teeth (onto the ground) and examine its (relevant) characteristic.[2]

If the front part (of the stick) faces east, west or north, this is auspicious and the best. Or if the stick for the teeth falls (in such a way that) it faces south-east, south, south-west, north-west, north-east or downwards, that is inauspicious. In that case, the aforementioned Śikhādūtī mantra should be repeated a 1000 times and 108 offerings should be made to the fire. This is the characteristic of the stick for the teeth.[3]

(Then) the teeth should be cleaned (with the same stick purified) with the recitation of the Five *Praṇavas*. This is the procedure concerning the stick for the teeth. (The teacher) should perform (the rite) of the Sleeping Man first (himself)

be) twelve fingers long for those who aspire to worldly enjoyment and made of Plakṣa, Āmra, Kakubha, Aśoka, Jambū, Campaka, Apāmārga and Atimukta.

Again, it is taught that for Brahmins, Kṣatriyas, Vaiśyas, Śūdras and those of the lowest castes it should be twelve, eleven, ten, nine and eight fingers long, respectively.

We notice here that the stick that is twelve fingers long, as it should be in this case, is for those who aspire to worldly enjoyment and / or are Brahmins.

and then, after that of the Sleeping Man of the disciple laying on the bed. (Thus this) the first consecration, called that of the Sleeping Man, has been explained.[1]

Although, the rite of initiation described in chapter fifteen of the TĀ is not the same as this one, it contains many elements that are common to the rituals performed here and Śaiva rites of initiation in general. According to the TĀ, the rite of the stick for the teeth is amongst those performed to initiate the neophant as a regular member (*samayin*) of the community. As happens here, it is performed before the disciple goes to sleep. Chapter fifteen of the TĀ describes a long series of preliminary rituals that precede the rite of initiation. Most of them are concerned with the inner purification of the teacher that leads to his conjunction with Śiva. These are followed by a fire sacrifice and the preparation of the sacrificial pap (*caru*). When this has been done the teacher utters the following prayer drawn from the *Mālinīvijayottara*:

> "You, O Lord, have ordained me a teacher. May your favour rain down on these disciples, impelled by Śiva's power directly, by means of dreams, teachings and the like, or by means of the teacher and the recitation of mantras. They are before you as you see them. Make of them a sign of your grace! Penetrate me with the rays of your Self, that I may be Śiva!" Having said this, he should (wait for and) joyously accept Śiva's consent to his request (that he grants saying): "Be it so".[2]

After this, the teacher leaves the sacrificial hall and goes to his disciples to purify them. There, out in the open, he should give them the five products of the cow, the sacrificial pap (*caru*) and the stick for the teeth. Abhinava's sources agree with the *Ṭīkā* that it is inauspicious for the stick the disciple has thrown on the ground to fall facing east, north, north-east or west. In order to remedy this, Abhinavagupta prescribes, as the *Ṭīkā* does, 108 oblations to the fire. But in this case they are accompanied simply with the utterance of the seed-syllable PHAṬ.[3]

The SŚP describes a similar procedure as a part of the preliminary rites leading the initiation of *Nirvāṇa*. The teacher places a flower in the hands of each of his disciples and they pay homage to the sacrificial jar and the other ritual objects in which the deity is present. They then prostrate before the teacher and leave the pavilion. Then the ŚSP explains:

> (Outside), (the teacher) draws three *maṇḍalas* on which he causes his disciples to sit (one after another) facing north if they desire liberation and east if they desire worldly benefits (*bhukti*). On the first *maṇḍala*, he makes them drink three mouthfuls of the Five Nectars[1] from their hands whilst holding a blade of Kuśa grass. Between each mouthful, the disciples should rinse their mouth (*ācamana*).
>
> On the second *maṇḍala*, (the teacher) should make them eat the sacrificial pap (*caru*) in a bowl made of Palāśa leaves if they desire liberation and Pippala leaves if they desire worldly benefits.[2] They eat three or eight mouthfuls taking care that their (upper and lower) teeth don't make contact. In the meantime the teacher utters the (seed-syllable of) the Heart. Then they rinse their mouth (*ācamana*) with pure water.
>
> After this, (the teacher) gives them a stick for the teeth (again uttering) the seed-syllable of the Heart, as they chew it with the tips of their (front) teeth. After washing it, they let it fall on the ground with its upper part facing upwards. The teacher notes the result.[3]

The ŚSP[4] agrees that if the stick falls in the above mentioned directions it is auspicious. If not, a 108 oblation should be offered to the fire while reciting the

---

[1] The Five Nectars – *pañcāmṛta* – are the five products of a cow – *pañcagavya*, namely, cow urine and dung along with curd, milk and clarified butter. This is mixed with water in which consecrated Kuśa grass has been placed. Consecrated with mantras, the sprinkling of this mixture serves to purify the sacrificial ground (cf. ŚSP II, p. 30), the ritual impliments and the rest (TĀ 15/370-374). The teacher saves a part of this mixture for his disciples (ibid.), which he uses for various purposes, including this one.

[2] Brunner explains (ŚSP2, p. 70. n.190) that according to Siddhānta ritual practice: 'Rice is called *caru* if it is cooked according to the rules. It is with this rice, not any other rice, that one must make the oblations. It should be prepared daily, but for the daily ritual it can be cooked with water. *Caru* – the sacrificial food – is also called *havis*.' Gnoli (1999:489, n.196) notes that *caru* is 'an oblation of rice grains cooked in water with milk or butter, or also, steamed. It is important that it should be cooked on consecrated fire. A portion of the main sacrificial fire, in which oblations are offered is removed and used separately especially for this purpose.

The *caru* that the teacher gives his disciples to eat on this occasion may well be simply this cooked rice. But it may also be varieties of cooked meat and other non-vegetarian sacrificial substances. Thus, depending on the ritual procedure of a particular school, *caru* may be of two types according to whether, as Abhinava says, it is made of 'ordinary or special substances'(TĀ 15/436cd-441ab)

Weapon mantra. The following table records how the *Mataṅgāgama*[1] prognosticates the directions in which the stick falls.

21. The Directions in which the Stick Falls and their Prognosis

Direction	Prognosis
Below	Death
Above	Victory
East	Power
South-east	Suffering for the adept
South	Death
South-west	Famine
West	Gain, prosperity and energy (*tejas*)
North-west	No peace in the next world
North	Beauty, success, health and intelligence
North-east	Knowledge. The adept attains universal sovereignty. The teacher will have a long spiritual lineage and will be satisfied.

We have already noted that according to the procedure described in the TĀ both the disciple and the teacher sleep and dream. When they wake up the teacher should examine his dreams and that of his disciple to measure their power and import. The auspicious dreams Abhinava mentions are the preparation and celebration of a rite for the gods, the fire or the teacher. Others are the sight of a beautiful woman, the drinking of wine, eating of raw meat, drinking of blood, the cutting of (someone else's?) head, smearing oneself with blood, feces or urine, mounting on animals that are pleasing to ride, such as a horse or elephant and climbing a mountain. Abhinava recommends that the teacher tell the disciple that his dreams are auspicious to encourage him, if they are so. Otherwise, in order not to disturb his disciple with doubts, he should keep quiet and make 108 oblations to the fire accompanied by the syllable PHAṬ to counter them.[2]

The Second Consecration: *Adhivāsana*

'The second (consecration) is the purification'. *Adhivāsana* is the second consecration. Then the rite of purification (*adhivāsana*) is performed for the disciple who is (still) laying on the bed and has completed the rite of the stick for the teeth. This is as follows. The teacher first worships the Krama on his left hand. Then along with (his) right hand should place the hand of Śakti (i.e. the left one) on the head of the disciple who is on the bed. Then he should cause the disciple to perform the depositions of mantra and the rest (that is required on his body). Thus the purifying consecration has been described.[1]

[2] TĀ 15/481cd-489.

The simple rite described here which, in this context functions as a part of the preliminary purification (*adhivāsana*) of the disciple, is in other forms of Śaiva initiation of much greater importance than would appear here. This is the rite of the Hand of Śiva (*śivahasta*) which here, in consonance with the Śākta character of the Kubjikā Tantras, has become the Hand of Śakti. As Brunner (SŚP II p. 96) explains: 'The gesture by which the *guru* places "Śiva's Hand" on the head of the disciple is the central action, the culmination of this, the first initiation [i.e. the Samayadīkṣā]. One could say that it is basically this, all that comes before is nothing but a long preparation for it and what follows, an appendix.'

Far from a 'culmination' of the initiation here the rite of Śiva's Hand seems hardly more than a purifying benediction. Perhaps this is because the consecrations comprise such a long series of empowerments, including the Kaula ones, that the importance of this one is reduced. Even in the purely Śaiva context where it confers an initiate's status on the disciple, this, the first initiation, does no more than prepare him for the more radical purification that is to come in the Initiation of *Nirvāṇa*. As Brunner (SŚP III p. 98) puts it: 'Śiva's Hand loosens the bonds of *pāśa* a little; it does not liberate.' Even so, the rite is certainly more important in its original context than would appear to be here. This is surprising because, as we shall see, the procedure in the first ten consecrations is heavily based on their Śaiva equivalents. It appears that the contribution this rite makes to the development of the liberated condition diminishes in the Kaula context where other methods are considered to be more powerful. Indeed, the initiatory rites described in the KuKh, that make little room for the inclusion of the purely Śaiva model, omit this procedure altogether. We may contrast this tendancy with the equivalent procedure prescribed in some, at least, of the Śākta orientated Bhairava Tantras. Missing in the *Mālinīvijayottara*, perhaps for the same reason, Abhinavagupta selects another Trika Tantra, the *Devyāyāmala*, along with the Siddhānta *Dīkṣottaratantra*, as his authorities for this rite. In both these Tantras the Śaiva model is still powerful and so is, accordingly, the rite of Śiva's Hand. Indeed, the version of this rite in the *Devyāyāmala* is considered to be so powerful that it is reckoned to by sufficient by itself to conjoin the disciple to Śiva. But before we examine these sources and what Abhinavagupta has to say, we should return to the basic Siddhānta model presented in the SŚP.

According to the procedure laid down in the SŚP, in the preliminary phase of the Initiation into the Rule (*samayadīkṣā*) along with the preparatory purification of the offerings and utensils, the teacher also prepares himself by identifying with Śiva. He does this at this stage by performing the rite of Śiva's Hand on himself in the following way:

> (The teacher) should fashion a *maṇḍala* on his right hand with perfumes and worship the Lord according to the rule. Such is Śiva's Hand. Placing that shining (hand) on his own head with Śiva's mantra, he should contemplate himself as the (universal) agent at one with Śiva (and say to himself): "(Śiva) is the witness of the ritual actions (that take place) in the *maṇḍala*. In the jar he is the protector of the sacrifice. In the fire he is the recepticle of the offering (*homa*). In the disciple he is the one who frees from the fetters. In me he is the bestower of grace. I am (he), the Lord who (resides in the) five supports." The teacher should make this conviction very firm (within himself).[1]

The teacher identifies himself with Śiva in this way prior to entering the pavilion. He renews this identification again later when he leaves it in the same way by the power of thought. The SŚP explains:

> (The teacher now) solicits Śiva, and having obtained (his) consent, he establishes a sense of oneness (*ekatvabhāvanā*) (as he reflects): " I possess (every divine attribute) omniscience and the rest. I abide above all the Path (of manifestation). An aspect of myself is the place of union. I preside over the Great Sacrifice. I am Śiva!" (Then proud with the spiritual) pride that "I am Śiva." He should leave the sacrificial pavilion.[2]

According to some authorities, the teacher identifies himself again with Śiva by repeating the rite of Śiva's Hand a third time before placing it on his disciple's head. This takes place after a series of rites are performed outside the pavilion. When the disciple has been prepared in this way he is blindfolded and led into the deity's presence within the pavilion by the teacher. He is then is made to walk round within it in a clockwise direction and sit on a seat purified with mantras to the right of the deity. Then the teacher, by uttering a mantra and making a gesture, places the Self in the lotus of the disciple's heart and, after depositing mantras on the disciple's previously purified body, worships him. 'Then,' continues the SŚP, 'with the root mantra, the teacher should place on the head of the disciple who is facing east, Śiva's Hand that bestows Lord Rudra's abode.'[1]

---

[1] SŚP III v. 25-28. p. 29.

[2] SŚP III p. 79 verses 15-16.

According to the SŚP, after the teacher has placed Śiva's Hand on the disciples head, the blindfold is removed, whereas according to the procedure described by Abhinava, it is removed first. As he says:

> Then the teacher should worship on his right hand, by means of the left,[2] the wheel of mantras, effulgent and full of all the paths (of manifestation), that consumes every fetter. (Then he should) place it on the disciples' head and then finally touch progressively every part of his body.[3]

Abhinava's source here is the Siddhānta *Dīkṣottaratantra* according to which, in line with the Siddhānta view in general and that of the Trika *Devyāyāmala* we are about to examine, this rite transforms the neophant into a regular initiate into the Rule. In this case, he is said to be conjoined with the Īśvara principle, which is two principles below Śiva.[4] Abhinava continues in his usual manner by juxtaposing the procedure of this, a Siddhāntāgama, with that of his own most favoured school, Trika.[5] Thus, accord to the *Devyāyāmala,* the wheel that is contemplated on Śiva's Hand is basically the *maṇḍala* of the Trika. It consists of a Trident on which are located the three goddesses of the Trika – Parā, Parāparā and Aparā – along with their Bhairavas. The Trident is in the middle of an eight spoked wheel that rotates burning fiercely with the energy of the deities on the spokes and the trident. This form of Śiva's Hand is so powerful that the disciple need only contemplate it at a distance on the teacher's hand for it to paralyse the fetters that bind him. Indeed, it is so powerful that, placed on his head, its awesome energy 'separates him immediately from the vital breaths.'[1] In this way he is immediately and definitively conjoined to Śiva. Even so, one naturally supposes disciples would have preferred the gradual path and been content to contemplate the wheel from a distance.

[1] SŚP III p. 96 v. 107. See Brunner's lengthy notes.

[2] Note that although the drawing of the *maṇḍala* on the right hand as laid down by the SŚP implies the use of the left for this purpose, its empowering function is not expressly mentioned as it is here. The symbolic, energizing valency of the left hand, the hand of Śakti, attains its fullest expression in the second of our series of sixteen consecrations in which it is this hand that, first worshipped by means of the right, is placed on the disciple's head.

[3] TĀ 15/456ab-457. Although the SŚP does not, most of the Siddhānta texts do also enjoin, that the teacher should touch the disciple's body with Śiva's Hand as is done for the deposition of the deity's limbs. The *Uttarakāmikāgama* (20/66-72ab) refers to this procedure as '*sarvāṅgālambhana'*. See Brunner SŚP III p. 98.

[4] Aghoraśiva and Nirmalamaṇi maintain that the planes (*pada*) to which the initiate gains access at death by means of the Regular Initiation and its extension, the Special Initiation, are those of Rudra (*rudrapada*) and Īśvara (*īśvarapada*), respectively. Although, the latter should be carefully distinguished from the principle – *tattva* – of the same name, one wonders whether these authors were not influenced by the *Dīkṣottara*.

[5] We notice that this is Abhinava's method throughout his *Tantrāloka*. It is applied to the more theoretical passages that are predominantly philosophical, theological, soteriological or cosmological in character. It is also applied to those that are more 'yogic', as well as those, like this one, that are concerned with ritual. Although not infrequently, especially in the theoretical sections, Abhinava expounds just one view, more often he will present the equivalent from several

The Third Consecration: During the Bath

Now the consecration that takes place when bathing is going to be described. (This is done) with the royal offering (*rājopacāra*), that is, with fragrant myrabolans and the rest. Elsewhere it has been explained that the royal offering is consecrated (*abhimantrita*) and worshipped with (the mantras of) the eight Bhairavas along with (those of) the eight mothers. One should bath with eight jars (full of it). That group of eight Mothers along with the Bhairavas have been explained previously in the course of (describing) the rite of adoration (*pūjā*).[2]

It is said elsewhere that (it should be done) with fragrant myrabolans and the rest. They should be worshipped with the six jars and the Five *Praṇavas*. The six goddess – Sugandhā, Āmlakā, Amalā, Malā, Nivartanī and Suṣumṇā – should be worshipped with the six jars. Or else, the six jars are worshipped with the Group of Six Graces (drawn from) the midst of the Krama of Eighty-six each with their own mantra. Having worshipped the six jars, the disciple should be consecrated (by sprinkling him with their contents). This (procedure) is described in the *Bṛhadāgama* as it is in the *Niḥśvāsakārikā*. This is the disciple's bath.

schools. He does this both to draw them together as well as to distinguish their positions by situating them, more or less implicitely, in a hierarchy. He does, at times, refute one in the light of the other, but even then his concern is generally to locate a view, even one he does not fully agree with, into the framework of his inclusive hermeneutics, which is that of the Trika school he champions and constructs.

How is the teacher's bath? (it should be done) with fragrant myrabolans and the rest of the royal offering (*rājopacāra*). He gets the (desired) fruit by just recollecting that (offering) as he consecrates (himself) when he baths and (he gets it also if he does so) externally by (sprinkling himself) with fragrant myrabolans, musk, vermillion and the rest of the royal offering. This is the third consecration that takes place when bathing.[1]

The Fourth Consecration

Now (the consecration that takes place) after the bath is going to be described. An attractive jar made of gold, silver, copper or clay is filled with fragrant wine (*āsava*) and the mouth is covered with young mangoe leaves. Having done that, it should be placed on a *svastika* (drawn on) a Bhadrapīṭha. Then (the teacher) should worship the entire Krama there on the mouth of the jar. Once this has been done, he should (empty the contents) onto his disciple's head, sprinkling him as he recollects the Root Vidyā in conjunction with the Vidyā of 292 syllables. This, the fourth consecration that takes place after the bath, has thus been described.[2]

The Fifth Consecration: The Waving of Lamps

Now the fifth (consecration that takes place) when the lamps are waved (in front of the deity) (*ārati*) is going to be described. One must make five lamps of five different colours. Having sanctified (them) with the Five *Praṇavas* and prepared them along with rice wine (*kāñjikodana*) it should be given to the disciple. With what mantra? –

Beginning with this mantra (the teacher) should offer (the lamps). Then, there (in the same place) with the aforementioned Śikhādūtī mantra of thirty-two syllables the (teacher) should have the disciple's topknot tied. This, the fifth consecration, has been described.[1]

The Sixth Consecration: The Binding of the Blindfold

Now the sixth consecration which is that of the tying of the blindfold is going to be described. The blindfold should be sweet smelling and white. It should be tied with three threads. With what mantra? With the Kaula mantra of the Lord of the Eye or else the one that is taught in the Mata. The Kaula mantra:

OṀ JŪṀ SAḤ AMṚTĪŚVARABHAIRAVĀYA NAMAḤ

The one taught in the Mata is:

OṀ (or) AIṀ JŪṀ ŚUṀ VUṀ SAḤ

(The teacher) should tie the blindfold over the (disciple's) eyes with this mantra. Then the Three Principles should be purified by means of the sequence of the Three Principles of the triple Vidyā by consecrating (the disciple) with the water of the *argha* vessel. These three Vidyās are:[2]

(The Aparā Vidyā for) Vidyā Tattva:

Thus by the consecration of the Triple Vidyā, the triple principle becomes pure. Thus the sixth consecration of the Command relating to the binding of the blindfold has been described.[1]

The Seventh Consecration in front of the Door

Now, the seventh (consecration that takes place) in front of the door (to the sacrificial enclosure will be described). One should cause a *maṇḍala* to be fashioned with liquor (*ali*) and the Five *Praṇavas* outside the sacrificial enclosure (*yāgamandira*) near the door. The disciple, erect, feet together and hands folded should be made to stand on it. He should then be sprinkled there three times with the Weapon and the water from the sacrificial vessel (*arghapātra*) that has been sanctified with the Samayā Vidyā. He should then be made to enter the sacrificial hall. Thus the seventh consecration of the Command that takes place in front of the door has been described.[2]

The Eighth Consecration at the End of the Salutation

Now after the salutation (comes) the eighth (consecration). Having introduced (the disciple into the sacrificial pavilion), he salutes. Once he has done this, a handful of flowers is put in his hand. Then reciting the mantra of the Weapon first, (the teacher) should strike the disciple's head and then envelop him with the mantra of the Armour. Then he should tear off the blindfold with a golden scalpel. Or else, he should be made to throw a handful of flowers along with a Sumanas flower with the Root Vidyā. Thus the eighth consecration of the Command that comes after the salutation has been described.[1]

In the sequence of rites described in the TĀ the disciples are introduced into the pavilion and their blindfold removed just before the rite of Śiva's Hand that concludes the *Samayadīkṣā*. Here it comes as a preliminary to the equivalent of the *Nirvāṇadīkṣā*. In the TĀ we read:

> The teacher first introduces (his disciples into the pavilion). Their eyes are covered with a cloth consecrated (*mantrita*) (with the mantra of) the Eye. Bound forcefully in this way they are seriously intent (*acañcala*) and undistracted (*ananyahṛdayībhūta*), their conjoined hands full of flowers, pearls, jewels and the like. Once he has made them enter in front of the sacrificial area (*sthaṇḍila*) and made them kneel, he should cause those well concentrated (*bhāvita*) disciples to throw the handful (of flowers and the rest). Then, filling their hands again with flowers, he should rapidly remove the blindfold from their eyes in such a way that (each) disciple suddenly sees (what is before him). At the sudden sight of the sacrificial area, resplendent (*ullāsita*) with the power of mantras, (each) disciple is penetrated by them and so (*tadāveśavaśa*) becomes one (*tanmayatvaṁ prapadyate*) (with them). One who has been purified by grace (*śaktipāta*) sees the presence of mantras in the way a lover

> spontaneously sees the various qualities of the beloved. Even though (the mantras) where previously totally unperceptable, the senses of sight and rest become capable (of perceiving them) when they possess an aid like this (grace). Experts (*kṛtaprajñā*) who see a body, water, place, idol or the like on which mantra has been projected known whether or not it is present (there). The senses, aided by that (grace perceive each) conscious (presence). (This is) just as those who have been possessed (*mudrita*) in some way by a ghost or the like are frightened (in the presence of a teacher) because (he is endowed with) the auspicious power (*subhaga*) of the rays of the mantras deposited (on his body. And so they tremble and the presence of the ghost is apparent to them).[1]

The Ninth Consecration of the Command after the Circumabulation.

Now (comes) the ninth consecration of the Command that takes place after the circumabulation. (After they have all) circumabulated (the sacrificial area), the teacher should worship the Krama on his left hand again and place it on his disciples head along with Navātman and Navātmī. Having done so, he should make him bow again and purify the Elements again with the Five *Praṇavas*. Then he should spinkle him with (the sacrificial fluids as he recites) the following mantra:

AIṀ LAṀ HRĪṀ VAṀ ŚRĪṀ RAṀ KHPHREṀ YAṀ HSPHRAUṀ HAṀ AIṀ[2]

Thus the ninth consecration of the Command that takes place after the circumabulation has been described.[3]

[1] TĀ 15/448- 456ab.

[2] The Five *Praṇavas* represent, amongst other things, the Five Elements. In this mantra, the elemental energy of the *Praṇavas* is strengthened by linking each one with the seed-syllable of the corresponding element. The gross elements that constitute the disciple's body are purified in this way by charging them with the energy of mantra.

The Tenth Consecration

The Initiation by means of the Thirty-six Principles

Now the tenth consecration of the Command of (the disciple) who sits on the ground is going to be described. The disciple is made to sit on the *maṇḍala* fashioned (earlier) with the Five *Praṇavas*. There the disciple should be given the Initiation of the thirty-six Principles beginning with Earth and ending with Śiva by means of the peak syllable Navātman, namely HSKṢMLVRYŪṀ. This should be divided into nine as follows:

ŪṀ Ya Va La Ma KṢa Ra Ha ŪṀ[1]

In this way Navātman has nine letters. They are said to be denotators of the Principles thus: Navātman's ninth letter is Ū. To it belong the twenty-four principles from Earth up to Prakṛti with (its) qualities. Then the two principles Rāga and Puruṣa belong to the letter Ya. Two principles – Niyati and Aśuddhavidyā – belong to the letter Ya. Then the two principles, Time and Kalā belong to the letter La. Then above (that) is Navātman's letter KṢa to which belongs the principle of Śuddha Vidyā. Then the Īśvara principle of the letter Ra and then above that the letter Ha of Navātman to which belongs the principle Sadāśiva. Then above that is the letter Sa of Navātman to which belongs the principle Śakti. In this way these are the nine places of the nine letters that are generated from Navātman deposited (on the body).[2]

---

[1] Note that even though the writer has first stated that Navātman is HSKṢMLVRYŪṀ, which is the most common form of Navātman in the Kubjikā sources, he goes on to use the form of Navātman found in the *Svacchandatantra*. This is because his exposition of the Paths is based on that source. See SŚP III, p. 240 for Navātman of the SvT and an exposition of the *Navanābha-maṇḍala* described there which is used as the *pada* framework of the Six Paths.

[2] _idānīṁ bhūsthitasya ājñābhiṣekaṁ daśamaṁ kathyate | śiṣyaṁ [k kh: śiṣya] pañcapraṇaveṇa [k: -praṇavena] yathākṛtamaṇḍalopari upaveśayet | tatra tasya śiṣyasya navātmākūṭena ṣaṭtriṁśatitattvadīkṣāṁ [k: -triṁśatatvadīkṣā; kh: -triṁśantatvadīkṣā] pṛthivyādiśivatattvāntāvadhiṁ kārayet | yathā navātmākūṭam hskṣmlvryūṁ | idaṁ [k: ayaṁ; kh: aya] navadhā kārayet yathā evaṁ navātmano [k kh: -tmasya] nava varṇāḥ | te ca tattvānāṁ vācakāḥ kathyante | yathā navātmanavamavarṇaṁ [k: -ṣaṭkavarṇaṁ; kh: -satka-] ūkāram [k ukāraṁ] | tasya pṛthivītattvādi [kh: + prakṛtitatvādi] prakṛtitattvāntaṁ | saguṇamayī prakṛtiḥ | tattvāni [k: missing; kh: tatva] caturviṁśatiḥ [k: missing; kh: caturviṁśa *] | tato [k kh: tataḥ] yakārasya puruṣatattvaṁ rāgatattvaṁ ceti [k kh: iti] tattvadvayam | tato [k kh: tataḥ] vakārasya niyatir aśuddhavidyā [k kh: niyati-] ceti [k kh: missing] tattvadvayam | tato [k kh: tataḥ] lakārasya kālatattvaṁ [k: kāla * *] kalātattvaṁ [k: missing; kh: lakālatatvaṁ] ceti [k kh: missing] tattvadvayaṁ [k: missing] | tata [kh: tataḥ] ūrdhve kṣakāraṁ navātmavarṇam [kh: -varṇṇaṁ] | asya śuddhavidyātattvam | tato [k kh: tataḥ] rephasya īśvaratattvam | tatas tadūrdhve [kh: tataḥ-; k: -rdhva] hakāraṁ navātmavarṇam | asya sadāśivatattvam [kh: sadāśivatvaṁ] | tatas tadūrdhve [kh: tataḥ-] navātmavarṇaṁ [k: -varṇa-; kh: -varṇṇa] sakāram [k kh: ukāram] | tasya śaktitattvam | evaṁ_

Then above that comes Vyāpinī and above that Samanā, Unmanā, Śiva, and Bindu, it is said that the Half Moon (Ardhcandra) is there as well as Nirodhikā. In this way, one attains everything by the modality of (these) nine principles (*navatattvagati*). In the same way, one should observe (*upalakṣayet*) the thirty-six principles in terms of the nine letters and (indeed) everything (on all the Paths of) the Forces (*kalā*), Letter, Pada, the Worlds and Mantra. One should thus progressively purify (them). With what Vidyā? One should purify them with the Samayā Vidyā. Then (the teacher) should conjoin the Self of the disciple in the principle of the Lord (*patitattva*) called Śiva at the end of the Transmental on the unmanifest, supreme, tranquil, unborn and imperishable plane. (This is done) by means of the state of being of the utterance of the Root Vidyā. This is the Initiation of the Thirty-six Principles.[1]

One should observe all (that is on the the Paths of) the forces, Letters, Padas, the Worlds, and mantra here in the nine letters in the midst of the Principles. The pervasion from the plane of the letter Ū up to the end of the Transmental will (now) be explained. There are twenty-four principles there beginning with Earth and ending with Prakṛti. They are: earth, water, fire, air and space – this is the group of five gross elements. Smell, taste, form, touch and sound – these make up the group of five subtle elements. The anus, genital organs, feet, hands, speech, nose, tongue, eye, skin and ears – these are the senses of knowledge and action. Mind, intellect, ego, Nature and the three qualities – such are the twenty-four principles. Or else, (we may count) *sattva, rajas* and *tamas* (together) as the twenty-fifth. These are the principles of the letter Ū.[2]

The One Hundred and Sixty-four Worlds

There are 164 worlds corresponding to these Principles.[1] They are grouped together according to their location. The text simply lists the worlds and Rudras. There is no point in repeating the same lists by quoting the Sanskrit, so this has not been done here and analogous passages further ahead.

The letter ŪṀ corresponds to the two energies – Nivṛtti and Pratiṣṭhā. The former contains only the Earth Principle. According to the standard procedure of the Siddhānta *Nirvāṇadīkṣā* presented in the SŚP, the first 108 worlds are associated with the Energy (*kalā*) of Nivṛtti[2] which is purified first.[3] There are 56 worlds associated with Pratiṣṭhā.[4] Thus together they make 164 worlds. See plates VIIa and VIIb of SŚP III for comparative tables of the names of these worlds as listed in several Siddhānta sources and the tenth chapter of *Svacchandatantra* which is Rudraśiva's source. I will note the differences with respect to this source taking only occasional note of variants from other sources. Generally, the largest divergence is with Somaśambhu.

Each world in the five Forces (*kalā*) is governed by a Rudra, who is its Lord (Bhuvaneśvara). The name of each world is that of the Rudra who governs it. A Rudra is an individual soul (*aṇu*) who, although highly developed, is not fully liberated. Śiva bestows on each Rudra special powers that last as long as the world he governs continues to exist.

There are eight worlds associated with the Egg of Brahmā. Six of them are in the middle of the Egg and two above, as follows:

1) In the middle of the Egg of Brahmā: 1) Kālāgni 2) Kūṣmāṇḍa 3) Hāṭaka 4) Brahman 5) Viṣṇu 6) Rudra[5]
2) Above the Egg of Brahmā: 1) Vīrabhadra 2) Bhadrakālī

The Egg of Brahmā has ten directions, including above and below. In each of the ten there are ten Rudras and they are (all) worlds. These Rudras are in the following directions. (The ten Rudras of each direction possess the qualities of the guardian of the corresponding quarter and he is subordinated to them.)

[1] Several of these names, like this one, relate to Indra who is the guardian of this quarter.

[2] All these names related to Fire who is the guardian of this quarter.

[3] SŚP Kṣayāntaka – the Destroyer of Destruction.

[4] According to the SŚP (III p. 234) the name of the second world is Mṛtyuhara (Remover of Death) and so omits the third one. The names of the rest are the same up to Kartṛ, then come Kāla (Time), Dharma, Adharma, Saṁyoktṛ (the Conjoiner) and Viyojaka (the Disjoiner). The last two Rudras according to the SvT are Dharma and Dharmapati. These are all names of Death (Yama) the lord of the southern quarter who is the guardian of Dharma.

[5] SŚP: Ūrdhvaśepha: Erect Penis.

[6] This direction is particularly inauspicious. Accordingly, the Rudras who reside here are fierce and dark.

[7] SŚP; Dīrghbāhu – Long Arms.

[8] The West is the direction of the setting sun and so is related to the night and the underworld.

North-west: 1) Śīghra (Swift)[1] 2) Laghu (Light) 3) Vāyuvega (Force of the Wind) 4) Sūkṣma (Subtle One) 5) Bhikṣu (Mendicant)[2] 6) Kṣayāntaka (the Destroyer of Destruction) 7) Pañcāntaka (the Destroyer of the Five Elements) 8) Pañcaśikha (Five Topknots) 9) Kapardin (Dreadlocks) 10) Meghanāda (Thunder).[3]

North: 1) Nidhīśa (Lord of Treasure)[4] 2) Rūpavat (Beautiful One) 3) Dhanya (Rich One) 4) Saumyadeha (Noble Body) 5) Jaṭādhara (Dredlocks) 6) Lakṣmīdhara (Fortunate One) 7) Ratnadhara (Diamond Bearer) 8) Śrīdhara (Bearer of Royal Power) 9) Prasāda (Tranquillity) 10) Prakāśa (Light).[5]

North-east: 1) Vidyādhara (Knowledge Holder)[6] 2) Īśa (the Lord) 3) Sarvajña (Omniscient One) 4) Jñānadhṛk (Wisdom Holder) 5) Vedapāraga (Knower of the Vedas) 6) Sureśa (Lord of the Gods) 7) Śarva 8) Jyeṣṭha (the Oldest) 9) Bhūtapāla (Guardian of the Creatures) 10) Balipriya (Fond of Animal Sacrifice).[7]

Below: 1) Vṛṣa (the Bull) 2) Vṛṣadhara (Bearer of the Bull) 3) Ananta (Endless One) 4) Krodhana (Anger) 5) Mārutāśana 6) Grasana (Devourer) 7) Udumbarīśa (Lord of the Udumbara) 8) Phaṇīndra (Lord of the Snakes) 9) Cakrin (Bearer of the Wheel)[8] 10) Daṁṣṭrin (Big Teeth).[9]

Above: 1) Śambhu 2) Vibhu 3) Gaṇādhyakṣa (Leader of the Host) 4) Tridaśa (God)[10] 5) Tridaśeśvara (Lord of the Gods) 6) Saṁvāha (the Bringer) 7)

[1] The north-west is the direction of the Wind. Thus the names of most of these Rudras are related to the wind and its attributes.

[2] SvT: Tīkṣṇa: Sharp)

[3] SvT: Meghavāhana.

[4] These are the Rudras of the north, the quarter of Kubera who is the guardian of treasures and the custodian of good fortune and royal power.

[5] The tenth Rudra according to the SvT is Prabhāsaka. Īśānaśiva is the only source examined by Brunner where this Rudra is called Prakāśa.

[6] SvT: Vidyādhipa.

[7] Īśāna is the guardian of the north-east, accordingly there are a few Rudras in this group whose names are specifically those of Śiva.

[8] SvT: Vajrin.

[9] Snakes and fearsome beings reside in the lower worlds and their lords are like them, as their names indicate.

[10] SvT: Tryakṣa.

Vivāha (the One Who Carries Away)[1] 8) Nabha (the Sky) 9) Lipsu (One Who Wants To Gain) 10) Trilocana (Three Eyes).

Above these worlds are two more governed by Vīrabhadra and Bhadrakālī. In this way there are 6 worlds in the Egg of Brahmā, 100 in the ten directions and two above them, making 108 Rudras who govern as many worlds in the Earth Principle.

The Worlds in Pratiṣṭhā Kalā

Next come the other 23 Principles that are as follows:[2]

The Secret Group of Eight (*guhyāṣṭaka*)

The Water Principle: 1) Amareśa 2) Prabhāsa 3) Naimiṣa 4) Puṣkara 5) Āṣāḍhin 6) Daṇḍin[3] 7) Bhārabhūti 8) Lakulīśa

The Very Secret Group of Eight (*atiguhyāṣṭaka*)

The Fire Principle: 1) Hariścandra 2) Śrīśaila[4] 3) Jaleśvara[5] 4) Āmrātakeśvara 5) Madhyameśvara 6) Mahākāla 7) Kedāra 8) Bhairava

---

[1] Saṁvaha and Vivaha (note the penultimate short 'a') are the two winds of the upper regions. Naturally, the upper regions are inhabited by beings whose names associate them with the sky and the winds that blow there. It is not surprising also to find names of Śiva, who resides 'above', to be amongst them.

[2] The fifty-six worlds distributed in the twenty-three Principles pervaded by the force called Pratiṣṭhā are divided into seven groups of eight (*aṣṭaka*). The Siddhānta texts, of which the main authority in this case is the *Uttarakāmikāgama*, generally supply the name of each group. However, the *Ṭīkā* only names the last group of eight. The remaining names have been restored from the SvT.

The first four groups of eight are sacred sites in India. Brunner reports that: 'Commenting on the *Mṛgendra*, Aghoraśiva explains that this is because the sacred sites of the Indian continent lend access to the worlds that bear their names. In support of this view he quotes the *Mataṅga* where it says: In order to attain these (worlds), the creator, desiring to benefit (all) people, previously created (these sacred places) in the holy land of Bhārata where Hara is resides. (*Mṛgendra, vidyāpāda, adhvaprakaraṇa* comm. on 137cd-138ab. See Kane *History of Dharmaśāstra*, vol. IV, pp. 723-827.

[3] Read Diṇḍi.

[4] Many of these are names of mountains.

[5] Read Jalpeśvara.

The More Secret than Secret Group of Eight (*guhyaguhyāṣṭaka*)

The Air Principle: 1) Gayā 2) Kurukṣetra 3) Nakhala 4) Kanakhala[1] 5) Vimaleśvara 6) Aṭṭahāsa 7) Mahendra 8) Bhīmeśvara

The Purifying Group of Eight (*pavitrāṣṭaka*)

The Space Principle: 1) Vastrāpatha 2) Rudrakoṭi 3) Avimukta 4) Mahālaya 5) Gokarṇa 6) Bhadrakarṇa 7) Svarṇākṣa 8) Sthāṇu

The following are the eight worlds on the the path that extends from the principle of smell to the ego, omitting the intellect:[2] 1) Chagalaṇḍa 2) Dviraṇḍa 3) Mākoda[3] 4) Maṇḍaleśvara 5) Kāliñjara[4] 6) Śaṅkukarṇa 7) Sthaleśvara 8) Jaleśvara.[5]

The Group of Eight Divinities (*devayonyaṣṭaka*)

Eight Divinities (*devayoni*)[6] in the Principle of the intellect: 1) Paiśāca 2) Rākṣasa 3) Yakṣa 4) Gāndharva 5) Aindra 6) Saumya 7) Prājāpatya[7] 8) Brāhma

The Octad of Yoga (*yogāṣṭaka*)

This is in Nature and the Qualities:[8] 1) Akṛta 2) Kṛta 3) Bhairava 4) Brāhma 5) Vaiṣṇava 6) Kumāra 7) Auma 8) Śrīkaṇṭha

Thus the 164 worlds of the letter Ū of the seed-syllable (*piṇḍa*) Navātman have been declared. Again, The 49 *padas* generated from Navātman of this same letter Ū will (now be) declared. They are (as follows):

---

[1] According to the *Uttarakāmikā* and the texts based on it, the worlds 3) and 4) are called Nākhala and Nakhala (SŚP III p. 301 note 293). Kanakhala is the form of the second name according to Īśānaśiva also.

[2] According to the SŚP, these worlds belong to the ego alone. However, the great majority of Siddhānta works distribute these worlds in the way they are here.

[3] SvT: Mākoṭa

[4] SvT: Kālañjana.

[5] SvT: Sthūleśvara.

[6] The term *devayoni* 'divine beings' refers to both gods and demons.

[7] SvT: Prājeśa.

[8] Some Siddhānta authorities lodge these worlds solely in Prakṛti, others, as here, in the qualities as well. The SvT attributes these worlds to the intellect along with the previous group of eight.

ŪṀ Ya Va La Ma KṢa Ra Ha ŪṀ | 1 |
ŪṀ Ū/ Va La Ma KṢa Ra Ha Ya | 2 |
ŪṀ Ya ŪṀ La Ma KṢa Ra Ha Va | 3 |
ŪṀ Ya Va ŪṀ Ma KṢa Ra Ha La | 4 |
ŪṀ Ya Va La ŪṀ KṢa Ra Ha Ma | 5 |
ŪṀ Ya Va La |[1]

These are the forty-nine *padas* of the letter Ū. It also has twenty-four letters which are the following:

KṢa Ha Sa Ṣa Śa Va La Ra Ya Ma Bha Ba Pha Pa Na Da Dha Da Tha Ta Ṇa Ḍha Ḍa Ṭha Ṭa

These are the twenty-four letters of the letter Ū. Again, the six mantras of that same letter Ū are:

1) Heart 2) Eastern Face 3) Head 4) Upper Face 5) Topknot 6) Southern Face[2]

It also has the 32 goddesses (who govern the letters of the goddess's Vidyā). They were described previously when the deposition was explained. Again that same letter Ū has two forces (*kalā*): Nivṛtti and Pratiṣṭhā. This completes the Six Paths denoted by the letter Ū of Navātman.[3]

The Path in Vidyā Kalā

Next come the components of the Six Paths associated with the letters Ya, Va, La, Ma. These begin from the navel and end with the uvula. They are pervaded by the following seven Principles:[1] 1) Puruṣa (the Person) 2) Rāga (Attachment) 3) Aśuddhavidyā (Impure Knowledge) 4) Kalā (Limited Power of Action) 5) Niyati (Natural Law) 6) Kāla (Time) 7) Māyā

The Twenty-seven Worlds Distributed in the Nine Principles of Vidyā Kalā.

The SvT deviates substantially from the Siddhānta sources after the first twelve Rudras whom it refers to as twelve Suśivas. Here the *Ṭīkā* prefers to follow the mainstream and so the names of most of the remaining worlds coincide with the Siddhānta sources rather than the SvT.

A) Six worlds in Puruṣa: 1) Vāma 2) Bhīma 3) Ugra 4) Bhava 5) Īśāna 6) Ekavīra
B) Five worlds in Rāga: Pracaṇḍa 2) Umāpati 3) Aja 4) Ananta 5) Ekaśiva
C) Two worlds in Impure Knowledge: 1) Krodha 2) Caṇḍa
D) Two worlds in Kalā: 1) Jyoti 2) Saṁvarta
E) Two worlds in Niyati: 1) Svara[2] 2) Pañcāntaka
F) Two worlds in Time: 1) Ekavīra 2) Śikhaṇḍa[3]
G) The Eight Lords of the *maṇḍala* (*maṇḍaleśvarāṣṭaka*) in Māyā: 1) Mahābhuvana[4] 2) Vāmadeva 3) Bhava[5] 4) Bhavodbhava[6] 5) Ekadhimekṣaṇa[7] 6) Īśāna[8] 7) Bhuvaneśa[9] 8) Aṅguṣṭhamātra

The Six Paths of the four letters Ya Va La and Ma pertaining to the one (force called) Vidyā has been explained. In the same way the twenty-seven worlds of the four letters Ya, Va, La, and Ma have also been declared. Again, their *padas* are twenty, they are: Ma ŪṀ Ra Ha KṢa (that make) five. ŪṀ Ya Va La Ma KṢa ŪṀ Ha Ra (that make) nine. ŪṀ Ya Va La KṢa Ma (that make) six. Thus the twenty *padas* of the group of four letters Ya, Va, La and Ma generated from Navātman have been declared.

In the same way they have a group of seven letters. These are: Ña Jha Ja Cha Ca Ṅa and Gha There are two mantras derived from the aforementioned limbs and faces of the Vidyā, namely, the Armour and the mantra of the eastern face.[10]

The Path in Śāntikalā

Next comes the pervasion of the (following) three letters, namely, KṢa, Ra and Ha. (Their) pervasion extends from the uvula to the Point (between the eyebrows). There are three Principles there, namely, 1) Śuddhavidyā 2) Īśvara 3) Sadāśiva and the mistresses of the eighteen worlds. They are:

1) Vāmā 2) Jyeṣṭhā 3) Raudrī 4) Kālī 5) Kālavikaraṇī 6) Balavikaraṇī 7) Balapramathanī[1]

The text breaks off here and so the list of the worlds is incomplete. Also, the remaining components of four of the Six Paths for these letters are not listed. Moreover, the beginning of the next topic also seems to have been lost. This lacuna in the MSs of the *Ṭīkā* has been filled with the entries for the remaining worlds listed in table VII D at the end of the SŚP III. Note that they are not the main entries in this table. The variants recorded there have been chosen instead, The first seven entries of the variants agree with the names of the worlds and the goddesses who govern them with those of the *Ṭīkā*. Presuming, therefore that the rest is also be in agreement in the same way with the lost part of the *Ṭīkā* it has been restored from there. The same has been done for Śāntyatītā, the remaining Force.

8) Sarvabhūtadamanī 9) Manonmanī 10) Ananta 11) Sūkṣma 12) Śivottama 13) Ekanetra 14) Ekarudra 15) Trimūrti 16) Śrīkaṇṭha 17) Śikhaṇḍin 18) Sadāśiva.

According to the SŚP, the first nine worlds belong to Śuddhavidyā. The next eight worlds are in the Īśvara principle and the last world is in Sadāśiva.

The Worlds in Śāntyātīta are listed in chart VII E of the SŚP. They are:

A) Bindukalā in Śaktitattva:
1) Nivṛtti 2) Pratiṣṭhā 3) Vidyā 4) Śānti 5) Śāntyatītā and
B) Nādakalā in Śivatattva: 6) Indhikā 7) Dīpikā 8) Rocitā 9) Mocikā 10) Ūrdhvagāminī

Initiation through the Energies (*Kalādīkṣā*)

1) Nivṛttikalā:

All the letters of Earth. There are 108 worlds from Kālāgnirudra onwards. There are 28 *padas* begininning with Ū and ending with Ū. There are three mantras namely: 1) the Heart 2) the Western Face 3) the Head.[1]

2) Pratiṣṭhākalā:

There are 24 Principles from Water to Prakṛti along with the Principle of the qualities in Pratiṣṭhā. There are 56 worlds from Amareśa to Śrīkaṇṭha. There are 23 letters from Ha to Ṭa. There are 21 *padas* from the letter Ya to the letter Ra. There one three mantras, namely, the northern face, the Topknot and the southern face. This is Pratiṣṭhā.[2]

3) Vidyā

Within the force (called) Vidyā there are seven Principles from Puruṣa to Māyā, twenty-seven worlds from Vāmana to Aṅguṣṭhamātra, seven letters from Ña to Gha, 20 *padas* from Ma to KṢa and two mantras, the Armour and the eastern face.[3]

4) Śānti

(The force called) Śānti (contains) three Principles ranging from Śuddha Vidyā to Sadāśiva. There are eighteen worlds from Vāmā to Manonmanī. There is another group of eight worlds included here that ranges from Ananta to Śikhaṇḍin[1] that are not reckoned in the enumeration of the 224 worlds as they are contained (in other worlds). (Thus in order to make up the difference) there are seventeen worlds from Vāmā to Manonmanī and then Sadāśiva as the eighteenth should be included in the reckoning. Thus there are 18 worlds. There are three letters from Ga to Ka. There are eleven *pada*s related to the letters (of Navātman) starting from Ma and ending with Ha. There are two mantras, namely the Eye and the Upper Face.[2]

5) Śāntyātīta

Within Śāntyātītā, there are 2 Principles, Śiva and Śakti associated with the Drop and Sound. There are fifteen worlds from Nivṛti to Anāśrita, sixteen letters from AḤ to A, one *pada* (the letter Ū) and two mantras of the letter Ū, the Weapon and the Face. Thus the Initiation by means of the Spheres of Energies has been explained in brief.[3]

How is this done? (The teacher) should cause the fetters of the disciple's Self to be struck, cut, and destroyed etc by Śakti Kuṇḍalinī by means of the movement of the vital breath from the Foundation preceded by deep feeling (*bhāva*) and the utterance of the Samayā Vidyā. Then he should be conjoined in the Lord (*patitattva*) who is free of defect and perfectly tranquil. Thus the

[1] The account here is confusing. The series of worlds from Vāmā to Manonmanī are the first nine in the series of eighteen. The eight worlds that follow are here said to beginn with Ananta and end with Śikhaṇḍin. The source Brunner follows to make her chart, reverses this order. But she notes that some texts do list the worlds in this order.

Initiation by means of the Spheres of Energies has been explained in brief. (It is described) extensively in the *Bṛhadāgama* and also in the *Svacchandatantra*.[1]

The Initiation by Means of Nine Principles

Now the initiation by means of Nine Principles will be explained briefly. This form of initiation should be done with the nine letters of Navātman in the Principles from Prakṛti to Śiva. (The following Principles) should be purified by means of (the corresponding letters of Navātman). 1) Prakṛti is (purified) by the letter Ū; 2) Puruṣa by the letter Ya; 3) Niyati by the letter Va; 4) Kāla by the letter La; 5) Māyā by the letter Ma; 6) Śuddhavidyā by the letter KṢa; 7) Īśvara by the letter Ra 8) Sadāśiva by the letter Ha 9) Śakti and Śiva by the letter ŪṀ which is the place of the Point. As before the disciple's Self should be purified by means of the movement of the vital breath from the Foundation of Kuṇḍalinī preceded by deep feeling (*bhāva*) and the utterance of the Samayā Vidyā. Then he should be conjoined in the imperishable tranquil (reality) here in the midst of the nine principles. One should note all the worlds, letter and the rest as ennumerated. This is the initiation of the Nine Principles.[2]

The Initiation by means of Five Principles

Now the intiation by means of five Principles (will be explained). It should be be purified by means of the mantras of the faces. These are the same mantras of the six faces that were explained in the course of the worship of the Kramavidyā. One should purify the five Principles starting with Earth with these mantras of the Faces. Thus:[3]

1) The Earth Principle, the western face, the big toes up to the ankles, Brahmā's place.
2) (The Water Principle corresponding) to Ananta, the left face, from the ankles to the navel, Viṣṇu's place.
3) The Fire Principle (*tejastattva*), from above the navel up to the neck, up to Rudra's place should be purified with the mantra of the southern face.
4) The Air Principle should be purified by means of the mantra of the eastern face above that up to Īśvara's place and the uvula
5) Above that is Sadāśiva's place within the locus of the Drop. Vyomatattva should be purified there with the mantras of the upper and the uppermost faces.[1]

The following is a table summerizing the correspondences.

22. Table of Correspondences for the Initiation by Means of Five Principles

Principle	**Face**	**Part of the Body**	**Deity in the body**
Earth	Western	Big toes to the ankles	Brahmā
Water (Ananta)	Left	Ankles to navel	Viṣṇu
Fire	Southern	Navel to the neck	Rudra
Air	Eastern	Neck to the uvula	Īśvara
Space	Upper and Uppermost	Between the eyebrows	Sadāśiva

In this way, the five Principles should be purified by means of the mantras of the faces here in the middle (of these) as in the initiation by means of the Forces. There, in the case of the initiation by means of the Forces, the Forces are the most important. Here the Five Principles are the most important (but the division is the same). One should know that the Worlds, *Padas*, Principles, Letters, Forces and Mantras are all just as they are in the initiation by means of the (five) Forces. Kuṇḍalinī should be transported by the movement of the vital breath in the Foundation in consonance with the utterance of the Vidyā. In this way, one should purify the five Principles with deep feeling (*bhāvapūrvaka*). Then (the Self of the disciple) should be conjoined to the Nameless within the emptiness that is Śiva. The initiation by means of the Five Principle has thus been explained in brief.[1]

The Initiation by means of the Three Principles

Now the intiation by means of three Principles (will be explained). The syllable AIṀ is threefold thus: A, Ya, and Ma. Here (in this case) the letter A denotes Ātmatattva. One should know that it pervades twenty-nine Principles from Earth to Māyā and (that pervasion) should be purified with the letter A. In the same way the letter Ya pervades the three Principles from Śuddhavidyā to Sadāśiva and (that pervasion) should be purified with it. Again, the letter Ma should purify the pervasion of Śakti and Śiva.[2]

One should purify (everything) in this way with the letters, A, Ya and Ma and syllable AIṀ because they are all together at one within it. It is recited with the recitation of the Samayā Devī Vidyā uttered with deep feeling (*bhāva*). One should know that all, that is, the Principles, Worlds, *Padas* along with the mantras, Forces, Letters and the rest are (divided up) as they are in the Initiation by means of the Forces. This is the purification that should be done. Then (the disciple) should be conjoined with the Supreme Principle which is Śiva, the Unborn. Thus the Initiation by Means of the Three Principles has been explained in brief.

In this way in this sequence, one should know the Sixfold Path abides containing all things as Earth which is the fundamental (Principle) of the *Padas,* Worlds, Mantras and Forces. All that should be known. This should done by the disciple who is on the Earth. Thus one should perform the tenth consecration of the (disciple) who is on the Earth.[3]

The Eleventh Consecration of the Command at the start of worship

Now the eleventh consecration of the Command that takes place at the beginning of the rite of adoration will be explained. (The teacher) should make the disciple sit within the *maṇḍala* of the Five *Praṇavas*, then (the teacher) should make him perform the twenty-eight deposition there. Then he should transfer knowledge (of the supreme reality) into the disciple's body by exhaling and gazing upon him with the Vision of Knowledge (*jñānadṛṣṭi*) in consonance with utterance of the mantra with deep feeling. Thus the eleventh consecration of the Command has been explained.[1]

The Twelfth Consecration: The Circle of the Teachers.

Now comes the twelfth (consecration of the Command which is that of) the *Gurumaṇḍala*. This is as follows. (The teacher) should make the disciple sit in the aforementioned place, namely, the Circle of Teachers worshipped (previously). He should then be sprinkled with (the liquid from) the *argha* vessel which is on the Circle of the Teachers along with Navātman. Then he should also make the deposition in the north. He should then worship the aforementioned Circle of the Teachers (described with the words) ‘In the direction of the Moon' etc. Thus the twelfth which is the consecration of the Command relating to the *Gurumaṇḍala*, has been explained.[2]

The Thirteenth Consecration: The Instruction

Now the (imparting of the) Command (*ādeśa*) will be explained as follows. One should make the disciple sit in the *maṇḍala* of the Five *Praṇavas*

that is near the *Kramamaṇḍala*. Having sprinkled the disciple with the water of the jar of the rite of adoration (*pūjākalaśa*) and the root Vidyā and having then worshipped his own teacher, he should worship the goddess of the Samayā. (This initiation is given) in order to worship the mantra not to (impart) authority to worship the entire Krama. Thus the thirteenth consecration of the Command, which is the one pertaining to the permission (to receive) the initiation into (the practice of the) Samayā, has been explained. The consecration with the eight jars that (will be explained) further ahead (takes place) here.[1]

The Fourteenth Consecration of the Command: The Initiation of Purification in the Circle of Teachers

Now the Worship of the Teachers, which is the fourteenth consecration, will be explained. This is as follows. One should worship the Circle of Teachers ending with one's own teacher (as explained in the passage that begins): 'pervaded externally by the aforementioned five and the rest'. (How this is done) will be explained further ahead when discussing the Eighteen Nāthas. Then one should place (*dāpayet*) the Krama of Twenty-Eight (there). In this way, one should place the (sacrificial) vessel, food (*caru*) and lamp (there). Then, (the teacher) should give the Command (that allows the disciple) to worship with the mantra the chosen deity (*iṣṭa*), having purified the mantra in the way explained previously in accord with the sequence of the teaching concerning the Islands (*dvīpāmnāya*) (representing the letters) and in the ninefold manner (with Navātman). (This) the Initiation of Purification has been explained. It is the fourteenth consecration, which is that into the (worship of the) *Gurumaṇḍala*.[2]

The Fifteenth Consecration: The Worship of the Sequence

The Naming Ceremony

Now the fifteenth (consecration) namely, the Worship of the Krama, will be explained. This is as follows. Here, again, the consecration with the eight jars (should be performed first) (as described) further ahead when (the verse) ‘it should always be worshipped within the Dūtī’s body . . .‘ (will be explained). (The teacher) should make the disciple sit in the *maṇḍala* of the Five *Praṇavas*. He is first sprinkled with the water of the jar of the rite of adoration (*pūjākalaśa*) that has been consecrated with the Samayā Vidyā and 292 syllable Vidyā. Then he should worship the Circle of the Teachers and that of the Sequence there. Then he should give his disciple his name.[1]

There, close to the *maṇḍala* of the sacrifice, (the teacher) should cause to fashion a triangular *maṇḍala* with a square (around it). There, within the triangle (he should write the letters of the alphabet as follows). (The vowels) starting from A and ending with *visarga* begin in the south-east and extend up to the western corner. (These are the letters on) the southern line. Then (the letters on) the upper line extend from north-east corner to the one in the south-east. The twenty-four letters on this row begin with Ka and end with Bha. One should write the eight letters beginning with Ma and ending with Sa from the corner in the north-east to that in the west. (It looks like) this:[2]

Diagram 14.

Once this triangle has been drawn), the disciple is made to enter it. Then by recollecting the Six Paths by the power of the true Vidyā, the (disciple is) pierced by the energy of the Foundation by the application (*yukti*) of the two breaths (*prāṇa* and *apāna*) based on the condition of both (*ubhayabhāvapūrvakena*).

Then he should perform the Consecration of Knowledge (*vidyābhiṣeka*) here itself and the naming ceremony. The disciple is made to enter there into the middle of the triangle into which the letters have been deposited and is conjoined with the two Peak (syllables). (Then) a stick for the teeth should be placed in the disciple's hand along with some red flowers and fruits and unbroken rice (grains) that have been consecrated with the true Vidyā to serve as the consecration by the Vidyā. Then the disciple should throw them there into the triangle. He should be given the name that corresponds to the letter on which (the stick for the teeth) falls. For example, if it falls on the letter A then (the name is) Śrīkaṇṭhaśiva. If it falls on the letter Ā, then it is Anantaśiva and so on in due order for (all) the fifty (letters). Then the disciple should offer a handful of flowers to the teacher and satisfy (him). He should then circumambulate (the teacher) and prostatrate (before him). Thus the fifteenth (consecration) which concerns the worship of the Krama and is the Initiation of the Spiritual Son has been explained. It should be learnt in detail in the *Bṛhadāgama*. Moreover, that is (also) explained directly (*siddha*) in brief in the seventeenth chapter (of the ṢSS) by which (the account of the procedure that follows) is completed.[1]

known these individually, one has known the entire liturgy (*paddhati*) of the tradition (*āmnāya*).[1]

The six limbs and the Heart and the others. The six parts (*prakāra*) is the group of six that constitutes the Krama of Twenty-eight beginning with the group of four. The group of six are (the Yoginīs) beginning with Ḍā. The Six Paths are the Principles, Worlds, *Padas*, Letters, Mantras and Forces. The Six Cities (*pura*) are (the Wheels) beginning with that of the Foundation and ending with that of the Command. The six Siddhas are those beginning with Ānanda and ending with Pāda.[2]

They are described from a different point of view as follows:

1) Bhūta 2) Bhāva and 3) Śākta 4) Māntra and 5) Raudra and 6) Śāṁbhava – this is the Sixfold Path that proceeds from the Command (taught) in the Kula Āgama.[3]

Bhūta is the covering of the Worlds. Bhāva is applied as the *padas*. Śākta is said to be the letters. The mantras are said to be twelve. Raudra is said to be the Path of the Forces. Śāmbhava has the Principles as its mark. (This) is the initiation by the fire of the Command (*ājñānalavatī*) and is beneficial for the accomplishement of mantras.[4]

There are the worlds, the *padas*, the letters, the group of twelve mantras and there are said to be thirty-six Principles. These are now listed according to their various states of being. Earth, Water, Fire, Air and Space are said to be generated as the gross elements (*bhūtaja*). The five gross elements amongst the thirty-six principles correspond to the Path of the Worlds as they are at the beginning.

The mantras are said to be twelve. Now those born from Rudra will be declared. Thus (they are):

the mind, intellect, ego and Nature which is the fourth. These are said to be those Born from Raudra. These are those Born from Raudra, corresponding to the Path of the Forces.

Now the Śāmbhava (division) will be declared as follows:

The Person, Natural Law, Time and the powers of limited action and knowledge, Māyā, Pure Knowledge, Īśvara and Sadāśiva, Śakti and Śiva – the Śāmbhava (Principles) are said to be twelve.

Thus the Path of the Principles (that corresponds to) those Born from Śāmbhava has been declared.[3] Such is the Sixfold Path. It is contained within the

Principles and so the Principles are the most important. It is for this reason that the Initiation by means of the Thirty-six Principles in terms of the Peak syllable Navātman was explained first of all. Thus (these six) have been conceived in accord with the sequence of the Principles. This same (set of six is) now explained in terms of six groups (of six Principles).[1]

There are six Siddhas, six Ages, six Gestures, six Letters, six names, and six Yoginīs – he who knows (this, truly) knows Yoga.[2]

A list of the six Principles in each of the six groups follows, which need not be reproduced here. They are noted in the following tables as are additional details listed in the text.[3]

23. A) Six Siddhas – from Earth to Sound

Colour	Siddha	Principle
Yellow	Priyānanda	Earth
Dark blue	Ādharānanda[4]	Water
Red	Varcīśa	Fire
Smoke colour	Harisiddha	Air
White	Prāṇeśvara	Space
Colourless	Jihvājeśa	Sound

23. B) Six Yugas – from Touch to Hands

Name	Age	Principle
Spandana	Kṛta	Touch
Ratna	Tretā	Taste
Rukmaśobhāṅga	Dvāpara	Form
Gandharvāṅga	Kali	Smell
	Vāgbhāvayuga	Speech

23. C) Six Mudrās – from Feet to Eyes

Mudrā	Principle
Pāvanīmudrā	Feet
Pāyumudrā	Genitals
Guhyamudrā	Anus
Śrotriṇīmudrā	Hearing
Kāntimudrā [1]	Touch
Gomudrā	Sight

23. D) Six Letters (*akṣara*) – from Tongue to Nature

Mantra	Principle
MRĀṀ	Tongue
GHRĀṀ	Smell
MRĀṀ	Mind
BRĀṀ	Intellect
HRĀṀ	Ego
PRĀṀ	Prakṛti

23. E) Six Substances (*dravya*)[2] – from the Person to Vidyā

Name	Sacrificial Food	Principle
Puṣpa	Śālaja	Puruṣa
Nirṇīta	Dhauta	Niyati
Rājīvāṅga	Māṁsa	Rāga
Kādambarī	Surāsava	Kāla
Kañjāta	Matsya	Kalā
Viśālāsthiga	Bhojana	Vidyā

23. F) Six Yoginīs – from Māyā to Śiva

Yoginī	Principle
Mātaṅgī	Māyā
Vinatā	Śuddha Vidyā
Iḍāgrā	Īśvara
Sarvamaṅgalā	Sadāśiva
Śaśiprabhā	Śakti
Śivā	Śiva

This is the group of six formed by dividing up the thirty-six Principles. The Principles have been reckoned by taking the first letter of them all. All this has emerged from the Śāmbhava (state). It is the initiation by means of the

[2] These are also called the Six Names - *ṣaṭsaṁjñā*.

Principles (*tattvadīkṣā*). Thus everything one who is penetrated by the (power of the) Śāmbhava (state) (does) is fruitful.[1]

Now, the various means associated with the six (forms of) Śāmbhava (penetration) (*āveśa*) beginning with that of the Elements (*bhūta*) will be explained.[2]

The signs of the Bhūta penetration are tears, rotation and shaking (of the body), jumping up and then falling repeatedly (on the ground), frenzy accompanied by (the utterance of) unrelated gibberish (until one finally) faints (and looks) as (inert as) matter (*bhūta*).

Now the signs of Bhāva penetration. (The eyes of one who experiences this penetration) roll around (as do those of someone drunk) (*ghūrmi*). (He) sweats, horripilates and strikes at the limbs (of his own body). O god, these (signs) arise in one who (experiences the) Bhāva (state of possession) by (the deity) who is the object of worship. This is the characteristic mark of Bhāva penetration.[3]

Now (the signs of) one who (experiences) the Śākta piercing (*vedha*) are that (his) body rolls around like a wheel and falls (to the ground) in a moment like (dry) wood. Hallucinating (*bhramāpanna*), he sees (many things). This is the mark of Śākta piercing (*vedha*).

The characteristic sign of penetration by Mantra is that (one who experiences it) shakes, rolls around, babbles, speaks (constantly) and is astonished. This is the characteristic of penetration by Mantra.

The emergence of the five states from the Raudra (state of) penetration is its characteristic feature. The wise man (in this state knows) scriptures (he has) not read

[2] The six spheres into which the thirty-six Principles are divided are the six Kaula `Paths'. They correspond to degrees or aspects of the penetration of the energy of the Śāmbhava state (*śāmbhavasamāveśa*) from which they derive their distinctive Kaula character with respect to their Siddhānta equivalents. The ṢSS, from which the *Ṭīkā* continues to draw, lists the signs of attainment (*pratyaya*) that correspond to each of the six forms of penetration.

(both) word for word and their meaning. (He knows) the past and future and all (that is taking place) at present. All this is the result of the penetration of Rudra's energy He who has this sign (of attainment) has been pierced by Rudra's penetration.[1]

Now (we shall describe the signs of attainment achieved by) one who has been pierced by the (energy of) the Śāmbhava (state).[2] If the disciple has been purified by the Śāmbhava method for the aforementioned period of nine years or more,[3] then (the divine) quality of the Śāmbhava (state) emerges within him. If (the divine power of) Kubjīśa falls (upon him), he is born in the Western (Kubjikā tradition) and attains the Śāmbhava (state).[4] Then he sees all the worlds within Kubjikā's body, one by one in due order, ranging from the Principle of Puruṣa up to the Transmental, that is, up to the end of the Śiva Principle. In this way he attains knowledge of the Principles by means of this body and, beyond that, the state of Flight. He then shakes and rolls around, that is, (he experiences) the subtle (inner) vibration (*ghūrmi*) (of divine consciousness). He faints for a moment and then, when he comes to, (liberating) knowledge is transmitted to him. Just as an empty jar is filled with water, in the same way he experiences in a moment all the principles together, purified and perpetually manifest (within his body). At that very moment he abandons (for good all attachment to) the objects of sense as does a snake his old skin. He is adorned with the (divine) attribute of omniscience and, perpetually blissful, is constantly ecstatic.[5]

[2] The Śāmbhava state is the liberated condition. It is that of Śiva himself. Kubjikā is Śiva's energy and the power of the liberated soul who is in this state.

[3] Stages in the path of development are indicated by the periods of time one practices. Fixed and repeatedly mentioned in stereotyped fashion, they are symbolic and apply only to the ideal practicioner whose practice is faultless in all respects.

He is adorned (with Śiva's six) divine attributes. These are: 1) omniscience (*sarvjñatā*) 2) satisfaction (*tṛpti*) 3) beginningless awakened consciousness (*anādibodha*) 4) freedom (*svatantratā*) 5) perpetual (*nityaśakti*) and 6) unfailing power (*aluptaśakti*). Such is the characteristic of one who is pierced (by the energy of the) Śāmbhava (state).

In the same way, in the course of initiation into the Six Paths, (the six forms of possession), Bhūta, Bhāva, Śakti, born of Mantra and born of Rudra (arise) and successively, one after the other, (until one reaches) the pure Principle of the Śāmbhava (state). (Then one) acquires the Śāmbhava knowledge beginning with (the one that arises from penetration by the) Elements (*bhūta*). Thus beginning with the penetration of the Elements and then that of Being and so on progressively, the Śāmbhava piercing arises. In the same way, progressively (but in) reverse, beginning with the Śāmbhava penetration and ending with the one by the Elements, those who lack devotion, are deprived of the fruit of initiation. This is the result of not having taken initiation. Thus the initiation of the Six Paths[1], which is contained in the initiation by means of the thirty-six Principles, has been explained.[2]

The Initiation by Piercing

Now (we will discuss) the initiation that takes place by piercing (*vedhadīkṣā*). (This requires) the aforementioned triangle in which the letters have been written. Possessing three lines, it is used to give the disciple a name. There are two letters there in the middle (of it), namely, Ha and KṢa. (The teacher) should make their special (form) (*viśeṣa*): HRĪṀ from the letter Ha and KṢRĪṀ of the letter KṢa. The two Peak syllables (formed) this way should be placed on the three lines of the triangle onto which the letters have been deposited. Having introduced the disciple there (into the triangle), he is pierced by recollecting the Six Paths by the power of the accomplished Vidyā.[1]

The Consecration by the Vidyā takes place there itself as does the naming ceremony. As explained previously, (the name of the disciple) is Śrīkaṇṭha if the flower falls on the letter A. There (however), something was not explained. One should understand that clearly here. What is that? (The teacher) should give the Five and Nine sacrificial substances to the disciple there. (This is done) on an auspicious day, time, constellation, moment. (It is done) during the 14th or the 8th day of the lunar fortnight, or on a day sacred to the teacher, or when the sacred thread or garland is offered to the deity or on Śiva's night.[2]

Scent, the flower, water, white mustard (*siddhārtha*), delight, joy, meat, camphor and sandalwood are said to be the nine substances. The five substances are said to be blood, meat, bone, marrow and skin.

1) Scent (*gandha*), this is sweat. 2) Flower, this is the flower of the Yoni, that is, (menstrual) blood. 3) Water, this is Śiva's water (i.e. urine). 4) Viṣṇu, this is urine. 5) White mustard (*siddhārtha*), (this is so called) because it is that which accomplishes (*siddhyati*) a meaning (*artha*) that is, word. That which is there, that is, where the tongue is located (*jihvāsthāna*) is *siddhārtha*. (Thus this means saliva). 6) Joy (*harṣaṇa*) is wine (*surā*) 7) Meat is meat. 8) Camphor (*candra*) is Indra's sperm (*indraśukra*). 9) Sandalwood (*candana*) is fat (*vasā*). These are the nine (sacrificial) substances.[3]

Then the disciple is given a name. (But first the teacher) should give (him) the five substances of the Rule. These are: 1) blood 2) meat 3) bone 4) marrow taken from a skull and 5) skin. Once the disciple has been given the five substances in this way, he should be given a name. Thus the Initiation into the Six Paths, along with the Initiation by Piercing in accord with the thirty-six Principles has been explained.[1]

Next (the teacher) should tell (the disciple) the Rules (*samaya*) (he should observe, as follows):[2]

1) The things one must worship (*pūjayet*). 2) The things one must not do (*kārayet naiva*). 3) The things one must keep hidden (*gopayet*). 4) The things one must eliminate (*ghātayet*). 5) The things one must not criticize (*na nindet*). 6) The things one must not talk about at all (*na vadet kiñcit*). 7) The things one must not see (*na nirīkṣet*). 8) The things for which one must not feel revulsion (*na jugupsayet*).[3]

[2] This section is taken from the commentary on ṢSS 17/165cd-175ab. The conclusion continues up to ṢSS 17/181. It is normally practice that the teacher tells the disciple the Rules he must observe after he has received initiation and has been given a new name. In his *Tantrāloka*, Abhinavagupta also lists the rules the ordinary initiate (*samayin*) should observe just after he has dealt with the rites of initiation (TĀ 15/521ab-610ab). The word ‘*samaya*’, here translated as `rule’, also means ‘pledge’ or `undertaking’. Abhinava defines it in three ways. The first is the ordinary sense of the word. The other two meanings are extracted from the etymology of the word that Abhinava derives from the root `*i*’ meaning ‘to go’ or ‘to know’. Thus he writes:

> The Rules (*samaya*) are called this for three reasons. Firstly because they must necessarily be observed. (Secondly), because by means of them one moves towards the supreme reality and, (thirdly because) they are the means to attaining knowledge. TĀ 15/608ab-610ab.

These eight rules in a more complete form are as follows. They comprise what is called the `Group of Eight Rules'.

1) The things one must always worship (*pūjayet*): A) A senior person *(jyeṣṭha)* B) The scripture *(śāstra)* C) The chosen mantra *(iṣṭamantra)* D) Bhairava E) Wine *(madira)* F) The goddess called Samayā G) The Self which is Navātman.
2) The things one must not do (*na kārayet*): A) Disturb (others) *(kṣobha)* B) What is unpleasing *(apriya)* C) Be angry *(kopa)* D) Desire another's wife E) Obstruct the rites *(kriyāvirodha)* F) Be lazy *(ālasya)* H) Transgress the Command *(ājñābhaṅga)*.[1]
3) The things one must keep hidden (*gopayet*): A) The rosary *(akṣasūtra)* B) The written and drawn form of the deity (*pada*)[2] C) The skull *(tūra)* that serves as a sacrificial vessel D) The gatherings where Yoginīs and Vīras meet *(yoginīsaṅngamacakra vīrasaṅgamavīracakra)* E and F) The Vidyās and mantras one has attained *(siddhavidyā siddhamantra)* G) Yogic gestures *(yogamudrā)*.[3]
4) The things one must eliminate (*ghātayet*): A) Deviousness *(kauṭilya)* B) Deceitfulness *(dambha)* C) Backbiting *(paiśūnya)* D) Attachment *(rāga)* E) Aversion *(dveṣa)* F) Pride *(ahaṁkāra)* G) Delusion *(moha)*.[4]
5) The things one must not criticise (*na nindet*): A) The Rule *(samaya)* B) The teacher *(ācārya)* C) A woman *(strī)* D) A virgin *(kumārī)* E) One who observes a vow *(vrata)* F) The substances of the Siddhas *(siddhadravya)* G) The way people behave *(lokaceṣṭā)*.[5]
6) The things one must not talk about (*na vadet*): A) (What one has seen and heard from) the teacher B) Yoginīs C) Siddhas D) The secret language of the scriptures *(śāstrāṇāṁ guhyabhāṣaṇa)* E) Language that is not clear such as that of

This is the Group of Eight Rules (*samayāṣṭaka*). The Command operates for one who observes it. Without observing the Rule in this way, (the intiate has) no power (*sāmarthya*) and so, without power, (he does not experience) the plane of Stillness (*nirācāra*). Therefore without observing the Rule, the initiate falls and, degraded (*bhraṣṭa*), is destroyed.[4]

Another set of Rules is found in the *Devyāyāmala* quoted by Abhinavagupta in the *Tantrāloka* (15/521ab-531ab). Although not the same, they are also divided in the same way into eight groups of eight making sixty-four which, it seems, is a standard set. Thus, above (KuKh 30/230cd-231ab) we are told that this is their number. They are:

1) **The eight things one should not utter** are the intimate nature of mantas and the Tantras, the rules, the rituals and secret reunions, words with no basis, bitter words and lies.
2) **The eight things one should abstain from** are actions that are fruitless and harmful, touching the women of others, pride, fraud, damaging others by means of evil spirits, poison and disease.
3) **The eight things that should be kept hidden** are one's own mantra, the rosary, one's own knowledge, the knowledge of truth, one's own spiritual discipline, qualities, defects and signs of perfection.
4) **The eight things one should worship** are the teacher, the deity, fire, those who excell in knowledge, women, the vow and the teacher's family.

Thus the fifteenth consecration of the Command relating to the worship of the Krama has been explained. The consecration with eight jars will be (explained) further ahead. (Where the goddesses says) that '(the Yoginīs) should always be worshipped in the body of the Dūtī' and (how) the eight (jars are worshipped) there in that place will be explained in the course (of explaining) the manner in which regular worship takes place.[1]

The Sixteenth Consecration, the Consecration of Kula:

Now the consecration of the Command that takes place at the end of worship (*pūjā*) will be described. It is the sixteenth and is called the consecration of Kula. First of all the disciple should be tested for a period of ten or five years. What should be tested? (He should be tested to see if he is) endowed with good qualities, worships the teacher, the deity, and the fire, that he is tranquil, devoted to ritual and always devoted to the Kula scripture, well behaved, devoted to the Yoginīs and the Siddha's sacrificial substances, loveable, free of secret deceit, always blissful, devoted to the teacher and elders, and is not in conflict with (his) teacher in mind, speech or deed. Having examined the devotee in this way (and seen him to be worthy, the teacher) should have compassion (for him). This is (what is said) in chapter seventeen (of the ṢSS).[2]

Having purified the disciple in this and many other ways, the teacher should then consecrate him. When (should he do that)? (He should do that) on a

---

5) **The eight creatures one should satisfy** are the poor, the afflicted, one's parents, the guardians of place (*kṣetrapāla*), living beings, birds, the demons who reside in cemetries and the deities in the body.
6) **The eight things that one should achieve** as learnt directly from the teacher are Śiva, (his) Power, the Self, the Gesture, the nature of mantra, (the understanding of the emptiness of) transmigration, enjoyment and liberation.
7) **The eight things to strike at** are attachment, hate, backbiting, cowardice, jealousy, presumptiousness, those who infringe the rules and those that don't practice them.
8) **The eight types of beings who should be chastized** are those who follow the doctrines of the fettered, cruel people, the indolent, traitors, the foolish, the satellites of princes, evil people and those who cause obstacles.

Kaula sacred day (*kulaparvan*) (or) another well known sacred day. Other well known sacred (lunar) days are: the eighth (day of the lunar month), the fourteenth, the fourth and the New Moon (of the months of) Śravaṇa, Bhadrapada, Magha and Phalguna. (Other sacred times are) the day of a new moon when it falls on a Sunday and when the moon is in certain constellations (*vyatīpāta*), the great festival performed for an elder, when the teacher comes or his word, at the beginning (of the study) of a scripture, in the middle of the initiation and when the sacred thread is hung (on the deity). There are also other excellent sacred days such as Mahānavamī and the like. Worship, giving of charity and the rest there (on these days) all (gives) permanent (benefit).[1]

Having first tested the disciple in this way as before the Kulācārya should give him the post of a Kulācārya. In which place (is this done)? (This is done) in a well hidden place where there are no people. It is strewn with flowers and perfumed with incenses, scent and the like. It is strewn with beetle etc and perfumed with sandalwood and musk. The aforementioned nine and five sacrificial substances filled with wine (*surā*), liquor (*āsava*) and meat (are placed there). The teacher is there. His body is clean, he has bathed well and his intentions (*bhāvanā*) are pure (as are those of his disciple). A jar (is placed there) made of gold, silver, copper or clay. It should not be black in colour and should possess (all) the good characteristics. It should be filled with liquor (*ali*) or water. Gold alonf with five jewels (are placed in it) and it should be wrapped in two cloths. (The mouth of the jar) is covered with mangoe leaves and it is smeared with musk and sandal paste.[2]

One should light many lamps there and (the jar) should be placed there in the place where the sacrifice (is performed). In this way, the jar should be installed in the middle of the place where the preliminary purificatory rite (the *adhivāsana*) is performed. As before, one should worship eight jars outside (around) the jar in (the eight directions) starting from the east up to the north-east. They should all be installed (in their places) along with the five jewels and the rest. One should worship the Krama there within the jar in the middle. The eight (Mothers) Brāhmī and the rest should be worshipped in the eight jars, along with Bhairava, the sacred fields, houses, vowels and the Five *Praṇavas*. One should also worship the sequence of Sixty-four (Yoginīs) there in another group of eight jars. This (will be explained) further ahead (where) the venerable (goddess) Vakrā says: '(the Yoginīs) should always be worshipped in the body of the Dūtī there at the time (of imparting of) the Rule.[1]

In this way, one should worship the other group of eight jars there along with the nine (substances) and the six-four (Yoginīs). Then having meditated on the divine form of the deity (*divyadhāraṇā*), (the teacher) should conjoin the knowledge (of deity) into the body of the disciple with deep feeling.[2]

Then one should install (the teacher's) sandals in the eastern quarter of the location where the preliminary rite of purification takes place and the nine jars (have been installed). Then the cloth for meditation (*yogapaṭṭa*) (should be placed) in the south, orpiment (*gorocana*) in the north and white mustard for protection and *tilaka*s should be place in the west along with the scripture (*pustaka*). In the same way (the following things should be placed) in the north-eastern corner of that place – 1) an umbrella 2) a fly wisk 3) a turban 4) a thread for the waist 5) a small bell 6) a sacred thread 7) rosary 8) a bowl (*pātra*) and mustard seed should scattered (all over the ground) for protection. The stick and the rest should be placed (there) with the (mantra of the) Weapon. All that should be worshipped with the Five Offerings.[3]

Then one must worship the Siddhas, goddesses, Vināyakas, the regular initiates (*samayin*), adepts (*sādhaka*) and apprentices (*pūtra*), virgins, ascetics, and all those who practice Kulācāra should be worshipped with the Kula sacrificial substances until they are satisfied. Then (after the) eight Mother have been worshipped, they should be installed in the eight jars. Then the other sixty-four (Yoginīs) should be worshipped there in the group of eight jars. Then the Krama (of Twenty-Eight) consisting of the group of four and the rest, should be worshipped in the single jar that is in front of the Krama.[1]

In this way (the teacher) should consecrate (the disciple) with the seventeen jars. That will be explained further ahead where the characteristics of one's own consort (*dūtī*) (are described) beginning with the words : `They should always be worshipped in the body of the Dūtī .... ' And there (it is also written): 'In the case of consecration, the eight (jars worshipped) in the procedure for the regular rites are doubled'. [. . .]

How should (the teacher) consecrate (the disciple) in this way? The disciple should be made to sit, facing north, on the seat of the auspicious sacred seat (*bhadrapīṭha*) which is on top of a *svastika*. Then, having consecrated him with the sixteen jars, (the teacher) should give him the sandals, umbrella, sacred thread and all the rest. Then he should salute his teacher, prostrating full length (before him). Then the teacher says: `O disciple, quickly take up the post of teacher now. From today onwards you are fit to explain (the scriptures) in this tradition (*śāsana*). Exercise your authority'.[2] Then having saluted with the head along with the disciple and having rendered (the offering) greatly propitious (*mahāprasādīkṛtvā*) (the disciple) should take hold of it.[3]

Then the disciple should satisfy the teacher with a sacrificial gift (*dakṣiṇ*a) of gold, clothes and the like. He should not be stingy. If he is stingy everything is destroyed. Then the disciple should speak with the teacher (saying): `O lord, forgive me for what (wrong) I have done, that I have brought about due to (my) defects. From today (I will worship) your sandals. Save me from (my) Karmas. O lord, I offer to the lineage whatever I see however (I may see it)'. Having done this, the nine gestures mentioned previously are explained to the (newly) consecrated (disciple) as are the Five Wheels. By means of this consecration everything here and in the (next world) is certainly accomplished. Thus the sixteenth consecration, called that of the teacher, has been described.[1]

Rudraśiva concludes his exposition with a series of verses in which the names of the sixteen consecrations are listed saying that is 'said here'. Much of the *Ṭīkā* is drawn from the ṢSS and its commentary. He may, therefore, be quoting from the ṢSS. However, these verses are not found there nor, indeed, is there any description of the sixteenfold consecration, although it is mentioned in the *Saṁvartāmaṇḍalasūtra* with which the ṢSS begins. Although it is possible hat this section has been lost in the transmission of the ṢSS, it is more likely that Rudraśiva is referring here to the *Bṛhadāgama*, which may well have been a source for the ṢSS.

The Six Paths

The following table summerizes the contents of the Six Paths that are purified in the course of the Tenth Consecration. The material is drawn from the *Ṭīkā* (fl. 74a-74b). Compare this chart with the fifth one in the appendix at the end of SŚP vol. III.

The distribution of the mantras is basically the same as we find in the major Siddhānta sources. There are two essential differences. One is that the mantra in this case is Kubjikā's Samayā Vidyā. In most Siddhānta texts there are eleven mantras. These are, as here, the faces of the deity and the six limbs of the mantra. The deity of the Siddhānta is five-faced Sadāśiva. In the Kubjikā Tantras it is, as one would expect, the six-faced goddess Kubjikā and so there is an extra mantra for that face with respect to the Siddhānta. The faces are arranged regularly from Sadyojāta > Vāmadeva > Aghora/Agni > Tatpuruṣa > Īśāna. One wonders why, rather than the northern and the southern faces, the upper and uppermost faces are not treated together, as is the case with the initiation by means of the five principles. The distribution of the limbs is in their usual serial order.

Another major difference with respect to the Siddhānta sources are the *padas*. They are 81 here as they are normally in the Siddhāntas. However, these are not the parts of the mantra called Vyomavyāpin as we normally find there. Instead they are formed from Navātman in the manner prescribed by the *Svacchandatantra*. There Navātman is OM Ya Va La Ma KṢa Ra Ha Ū. The text of the *Ṭīkā* is corrupt even so it appears that the form of Navātman here may be Ū* Ya Va La Ma KṢa Ra Ha Ū. Ū* serves to distinguish this, the first letter in the reverse order given here, from Ū the last one.

The Padas

Nivṛti: (28 *padas* in the letter Ū*)

Appendix III

The following passage from the *Tantrasadbhāva* (1/141-205ab) is found between the equivalent of KuKh 40/104ab and 104cd. It has also been omitted in the *Ambāmatasaṁhitā*. It corresponds to SvT 4/234-296.

Now listen to how (the reality) established in motion (*cārastha*) is. O great goddess, (listen) to that division (*vibhāga*) as it should be known in reality. The motion (of the breath extends) thirty-six fingers (breadths) from the lotus of the heart up to that (supreme) plane (in the End of the Twelve). One should attend to the day within the breath (*prāṇānta*) by means of time, divided into sixteen parts, in association with the sequence of moments (*truṭi*). O beloved, that is the differentiated form (*kalanarūpa*) that is differentiated by time. (The breath) moves in parts (*vibhāgena*) as it goes from one place to the next (in the breathing cycle).[1]
(141-144ab)

(Now) for the sake of one who is unsure about (the condition) of the unawakened and (that of) the well awakened, (this is) taught (next). (First) one abandons the part (*bhāga*) of (the breath) that comes from the lotus of the Heart. The second is at the tip of the nose and the third is associated with Śakti. One who is established there returns (to the lower states) as long as he does not attain (the supreme) reality (*tattva*). Once the supreme and tranquil (reality) has been known, the one established there is not afflicted (by anything anymore). If he travels below Śakti he is then one who is unawakened. If he abide again in the Heart he is said to be one who is awakening (*buddhyamāna*). Having attained Śakti one should know that he is Awakened (*Buddha*) and he awakens in the Pervasive (*vyāpinī*) aspect (of the flow of energy). And within the Beyond (*atīta*), he is well awakened. Then the Transmental state prevails. (In that state) there is no time, no motion of the energies (*kalācāra*), (there are) no metaphysical principles (*tattva*) and (there is) no cause (of any effect). It is the beautiful (state of) *Nirvāṇa*. Supreme and pure, it is the plane (on which) the teacher (resides) that has come

(down) through the transmission (*kramāgata*). Without having known it, one is not freed. Having gone (there and attained it) one is not born again.[1] (144cd-150ab)

(Now) I will tell you how the sixfold Path is present in the breath. One should know that the Path of the Worlds is the energy of consciousness (*citi*), that is, the awareness (*saṁvedana*) (present) from the feet up to the top of the head. The Path of the Principles is just the same.[2] (150cd-151)

The vital breath that moves constantly is the process that is differentiated by the Energies (of the Path of the Energies). Nivṛti and Pratiṣṭhā are said to be in the lower part. Vidyā and Śānti are above and Śāntātītā sustains (them). The supreme condition is beyond that. Above that is the imperishable plane. One should know the energy of the point (bindu) in this way. It is the energy of Sound (*nādaśakti*). The pervasive energies, distinguished (one from another) as the pervader and the pervaded (with respect to one another), are all established in the one breath alone. Merger (*laya*) is said to take place at the end of the breath.[3] (152-155ab)

The Path of the Energies has thus been explained (now) learn about the Path of the Letters. (The one nature of) all the letters in this moving and immobile universe are Word. They are present as the division of the fifty (letters of the alphabet) in the endless millions of scriptures. The breath is said to be Word. The letters arises from that breath and dissolve away where Word has dissolved away. O fair lady, (the state) Beyond Word is (one that is) united with reality (*tattva*). O goddess, free (in all respects), it is omnipresent and free of virtue (*dharma*) and vice (*adharma*). If one has reached the Śiva principle, one does not look down again. One goes down due to vice (*adharama*) and one ascends again by virtue (*dharma*). Abandoning both by knowledge, the omnipresent state arises here (even in the sphere of manifestation).[1] (155cd-160ab)

The Path of the Letters has been explained. Here the Path of the Parts of Mantra is explained (next). (These are) the 81 parts (*pada*) of (Svacchanda Bhairava's mantra called) Vidyārāja. The *pada*s are letters and these letters are said to be the breath. Therefore all the *pada*s abide in this way in accord with the

breathing process. Thus the Path of the *Padas* has been explained, now understand my Path of Mantra.[1] (160cd-162)

The mantra of eleven (syllables) is established by Śakti. It moves constantly within the breath that contains eleven principles. The letter A, the letter U, the letter M and the Point. The Half Moon, the Obstructress, Sound, End of Sound, Śakti, the Pervasive, and the Equal One which is said to be the eleventh. The Transmental is beyond that and beyond that is the Faultless (Nirāmaya). In this way (all) mantras are present in the breath. Now (I will) explain the Utterance of Śakti.[2] (163-166ab)

The letter HA is said to be *prāṇa*. It is very active and its shape is that of a plow. The head is conjoined with the letter A. In this way the letter is uttered clearly. It assumes its own vocalic form by the conjunction of the Point with the top (of the letter). That is said to be the sounding (*vadana*) of Sound (*nāda*) and Sound is said to be Word. Due to this conjunction (*yoga*) that Self is said to be the Person (*puruṣa*). He moves within all living beings by the path of Brahmā, Viṣṇu and Īśa. He dissolves into the principle of Śakti and travels upwards by knowledge (*vijñāna*). Having abandoned the Pervasive and the Equal One, she who is the Transmental reaches Śiva. The Energy present in the principle Śiva is omnipresent (and so) does not move. The Utterance of Śakti has been explained. (Now I will explain) the Abandonment of the Causes.[3] (166cd-171ab)

The letter Ha is the energy of the vital breath (*prāṇa*). The letter A denotes Brahmā. He is abandoned in the heart. The letter U denotes Viṣṇu. He is abandoned in the throat. The letter Ma denotes Rudra. He should also be abandoned in the middle of the palate. Īśa is (the pure) vowel itself. He is abandoned between the eyebrows. Sadāśiva is the object of denotation of Sound. He should be abandoned from the beginning of the forehead up to the end of the head. Śiva is the object of denotation of Śakti, the Pervasive and Equal One. Śakti should be abandoned in the middle of the head. Above that, one should abandon the Pervasive One. Having abandoned the Equal One and the Transmental then that is said to be merger. O beloved, in the same way one should abandon subtle things with other subtle things. By means of gross and (progressively) grosser things (that energy) bestows many kinds of accomplishments.[1] (171cd-176)

The most subtle is the supreme state of being. That is considered to be Non-being. The Transmental state is the supreme state of being. It is considered to be the supreme reality at the end of (all that is) gross. Again, higher than that is the Void and 'non-touch' is higher than that. (The sequence consists of) Word, Light, mantra, the cause and the world orders. The world orders of the Five Elements are goverened by the Causes. He who pervades the world orders from the Void nature explained (further ahead) attains the status of the Lord of the Worlds. One should contemplate Śiva to be of that nature. One should recollect (his) form when gaining control of the cause beginning with Brahmā. One (thus) attains the aforementioned nature with the aforementioned characteristic. (177-181ab)

By means of mantras (one attains) the accomplishment of mantras and (the successful completion of) the repetition of mantra, the fire sacrifice and worship. One is certainly successful by contemplating the aforementioned nature (*rūpaka*). The lord of yoga attains the accomplishment of Yoga by contemplating the Light. If he becomes one with it, he becomes the lord of the Yogis.

By contemplating Word, he whose nature is Word fills (all that) is made of Speech (with his energy). By contemplating touch, he whose nature is touch, becomes the cause of the universe.

By contemplating the Void, he whose nature is Void, becomes pervasive and omnipresent. By the Yoga of the contemplation of the Equal One, the Yogi becomes omnipresent.[1] (181cd-185ab)

One should constantly contemplate Non-being which, supreme and subtle, is at the end of the Transmental. Beyond all the senses and mind, it is Being devoid of (any) characteristic (*alakṣya*). Having made Being faultless (*nirāmaya*) by the condition of being of Non-being one attains the plane of Non-being which is free of all limiting adjuncts. Such is your abandonment of the causes. (Now) learn about the abandonment of time.[2] (185cd-187)

The breath is said to number sixteen moments (*truṭi*). Having taken two moments as (one's) support, each one is said to be Bhairava. O fair faced one, they proceed (in this way) divided into Day and Night. The ninth is the supreme god, they arise from its radiant energy. One should abandon all time in the breath. I will tell you (how that is done).[1] (188-190ab)

The sixteen moments are the causes of time due to which all that is made of words moves within the well established (spans of) time. A moment, *lava*, *nimeṣa*, *kāṣṭhā*, *muhurta,* lunar fortnight, month, season, half year, year, *yuga, manvantara*, *kalpa,* and *mahākalpa* should be abandoned at the end of Śakti and supreme time in the limb of the Pervasive One and that should be abandoned in the limb of the (Supreme) Principle. One should know that to be the seventeenth. The 'supreme half' (*parārdha*) is located beyond that. That is the eighteenth (form of) time. One should abandon it at the end of the Equal One.[2] (190cd-194)

Universal time (*sarvakāla*), pervades time and is supreme and imperishable. The supreme (energy) (*parā*) should be applied to the end of the Transmental. There is no time there. Eternal, perpetually active and pervasive, one should abandon it in the form of Sound. And having attained that perpetually active reality, he becomes one with it (*tatsama*) always. Such is the abandonment of time. Now the being of the Void is discussed (next).[1] (195-197ab)

The Void above, the Void below and the Void in the middle as the third. Again the fourth one, the Void of the Pervasive One is (such), in relation to the three Voids, below, above and in between. The Equal One is here the fifth. The (Void) is that of the Transmental. These are the six. They are all sustained by the Principles and that is Māyā who bestows (all) fruits. Having abandoned them in the Void of the six, dissolve (them) away into the seventh. That Void is supreme and subtle, devoid of all states. What is not Void is said to be the Void and the Void is said to be Non-being. That is said to be Non-being where phenomena (*bhāva*) have ceased. How can that exist (*kim avasthitam*) and in what what way can that (exist) which is pure Being and the supreme tranquil (reality).[2] (197ab-202ab)

The supreme Void abides having pervaded everything wherever there is no Being, or (anything) else that is gross (or otherwise). Having pervaded gross (entities) it possesses gross limiting adjuncts. It abides as subtle and gross. Having attained that the state of being (*bhāvatā*) is, without a doubt, a condition that is one with that (*tatsamatva*). O (goddess) worshipped by the gods, out of love for you the doctrine of Voidness has been explained.[1] (202cd-205ab)

Appendix IV

The Secret Sign Language

Secret Kaula sign language is technically called *chomā* or *chomaka/ choma/ chomā/ chummaka/ cchommakā* and *cchommaka*. The Prakṛit *chomā* is probably derived from the Sanskrit *chadman* – meaning ‘covering’ or ‘deceit’ and so, by extension, ‘secret’.[1] It is referred to as a ‘language’.[2] Specifically, it is the language of secret signs and words Yoginīs speak when encountered by the adepts who seek them. We find examples of it in all the major traditions in which Yoginīs are worshipped extensively, both “Saiva and Buddhist. All of chapter 18 of the important Trika Tantra, the *Tantrasadbhava* is dedicated to it. This is the subject of chapter 53 (the *chommādhikāra*) of the BY[3] which is amongst the earliest Bhairava Tantras. There we find the ‘*chomakas*’ of the eight Yoginī / Mātṛ Kulas. The same subject is treated in the same way in the third *ṣaṭka* of the JY[4] and also briefly in the fourth *ṣaṭka*, but with no special reference to the Kulas.[5] In the JY the goddess asks the god about the *chummaka* of the deities (*devatā*). The term *cchummaka* appears in one place in the NT (20/39). Kṣemarāja explains in his commentary that *chummaka*s are simply ‘technical terms found in the Āgamas (*cchummakāni āgamikapāribhāṣikanāmāni*)’. He then quotes a few of them from the SvT and tells us that they are also found in the *Ḍākinītantra*.[6]

The Buddhist *Hevajratantra* has occasion to refer to this topic twice.[7] Snellgrove explains in a note[8] to the first of these two passages what is meant by this language of ‘secret signs’ called *chomā* (Tib.: *brda* – sign) which the commentator on the HT Kṛṣṇapāda glosses as *milicchā* (Tib.: *kla klo gyi skad* – barbarian language). ‘These terms’, he writes, ‘serve to emphasize the non-brahmanical origin of these practices. According to V [the commentator Vajragarbha]: ‘These signs are to be known as being of two kinds, even as it is said in the *Mūlatantra*: The practiser of *Heruka Yoga* learns the bodily signs and the verbal signs, for if he does not express himself with these bodily and verbal signs, he will come to grief even though he be a Buddha. . . . So Yogins and Yoginīs who practice the *Hevajrayoga* must make effort to remember these signs of the body and speech, so that in the company of malicious outsiders and male and female messengers from other families (than the *Vajrakula*) one need not converse in the terms of ordinary speech, but we shall speak of the great mystery by means of signs and these malicious outsiders and wanderers will be bewildered. [. . .] Bh [the commentator Bhadrapāda] adds to this information by telling us that: Practicing Yogins who wander about among the *pīṭha* and *kṣetra* [see above chapter 14-16] looking for proficient Yoginīs, should give these signs so that they may know which among the Yoginīs are in possession of the necessary tenets that accord with their own, so that they may arouse in these a condition of mutual responsiveness.'

Notice how anxious Buddhist Kaulas are to not be confused with others who belong to other 'families' – Kulas. Elsewhere, I have already had occasion to note that many of the sacred sites listed in the Buddhist Tantras like HT are the same as those found in the Bhairava and Kaula Tantras, including those of the goddess Kubjikā. The KMT warns the initiates of Kubjikā's Kula that they must take care to avoid Buddhist Kaulas in such places. The use of a secret language and gestures was certainly also intended by the initiates of the Kubjikā Tantras, as it was by their Buddhist counterparts, to preserve their distinct identity and communicate with other initiates in the presence of initiates of other Kulas. It seems, therefore, that Siddhas of various traditions would find Yoginīs of as many different traditions in such places.

This genre of sacred prostitution, if one is allowed to use this expression in this context, was thus quite different from the equivalent that took place for centuries in and around many temples all over India. The initiatory, secret and, hence, exclusive character of such cults helped to ensure, although, of course it could not guarantee, that union took place with the intention and form prescribed in the scriptures.

Notice that in the passage where they are described in our text (42/63cd ff), only the Yoginī makes the secret gestures. This is also the case in the following passage drawn from the *Sūtra concerning the Convention of the Secret Sign Language and Gestures* (*mudrāchomāsaṅketakādhikārasūtra*) in YKh (1) (4/147ff.). The male adept observes her, seeking to interpret what she has to say. Much of what she communicates concerns him, but there is also a great deal concerning the king and his kingdom. Thus, she is not only the Siddha's Tantric consort, she is also a royal oracle, one to whom an anxious king could go or send a Siddha, to ask her about his future and that of his kingdom. Accordingly, it was customary for the king of Nepal to visit the royal Kumārī - a Yoginī - during Durgāpūjā in autumn and receive a coin from her as sign that he will reign another year.

Let us see what the goddess says in this *Sūtra*:

Next I will tell about the meeting (*melāpa*) (that takes place) with the Yoginīs and the knowledge they possesses that is known by (true) Yogis by means of the language of the convention of secret signs (*chomāsaṁketa*). The Yoginīs certainly come in divine form to the sacred seats, primary and secondary, the meeting grounds (*saṁdoha*), assemblies (*cakra*), crossroads, in cremation grounds, and solitary trees and explain everything clearly. They are Guptā and Sahajā (Yoginīs), (the ones) called Kākinī, Śākinī, Bhāruṇḍī, and the auspicious Cakriṇī, as well as Kramajā and Jñānajā. They all tell what is auspicious and inauspicious.[1] (147-150)

If (a Yoginī) points the index finger of the left hand upwards, it means `welcome'. If (she places) the small finger on the left ear, she is communicating a blessing. If (she) points (her) index finger upwards, it is a particularly good welcome. If she touches her right ear with the middle finger, this is auspicious. If she touches the right nostril with the index finger, it indicates what is good (*śiva*). If she touches (her) hip it means that he (who sees her) will be a little worried. If she touches the navel with the ring finger it indicates that she is hungry and is requesting (him as if saying): `O proud one, unite with me (*melāpa*). I am pained with passion.'[2] (151-154)

If she envelopes a vessel repeatedly (with her hands), (she is saying) `O *sādhaka*! take the sacrifical pap (*caru*)'. If she strikes her belly it means she is asking to be satisfied with liquor and meat. If she shows the two ring fingers it means `O *sādhaka*, go home!' If she touch the palm of her left hand, she is welcoming (him). If she strikes her genitals, (she is saying): `O *sādhaka*! you are my son.' If she rolls her tongue around, (she is saying): `rest a while on the earth'. If she clenches her fist and shows it, her hair dishevelled, she is asking: `give me animal sacrifice (*bali*), O (my) child, I am satisfied with you' and he should give her the sacrificial pap (*caru*).[1] (155-158)

If she shows her chin and strikes her head, his life span will certainly increase threefold. If she rolls her eyes, it means that someone is coming from another assembly (*cakra*). If she falls in a faint on a crossroad, it means that he will go to another country and will certainly conquer (his) enemies. If that goddess vomits in the midst of the assembly and then eats it, it means that Kaulinī herself is saying that the wealth that has gone will return.[2] (159-163ab)

If she touches the right cheek with the big toe of the left foot, it means that he will certainly be the sole emperor of an empire. O Kujeśvara, if she digs the ground repeatedly with the big toe of the right foot, it means he will quickly obtain many things and it will not be otherwise. [3]

If she touches the left breast with her tongue it means that one will get the Mahārasa or else attain the plane of the Skyfarer. If she touches (his) head with the right and left foot, it means that he will obtain a kingdom and he will kill (his) proud enemy.[1] Three claps mean certain departure. O beautiful one, if she cries without sound, he will quickly capture the king. If she rubs her Yoni, it means that one's king will certainly die. If she laughs loudly it means that one will certainly prosper. If she clenches her right fist, it means: `O *sādhaka*! I am going (away)'.[2]

If she is very excited and makes a sound (facing) upwards and refers to the adept or the Kula, it means that he should leave that place or else die. If she exhibits the Gesture of the Yoni whose form is the bliss of delight, it means that he, the best of adepts who seeks a young woman, will get one he desires. If she knishes her teeth loudly in the middle of the assembly or meeting, it means that the royal power of the kingdom will be destroyed and it will certainly be crippled. If she falls in a faint in the middle (of the ground), striking (her chest) with her index finger, it means that the skyfaring state of the Yoginīs is arising within the leader of the sacred seats.[3] (163cd-174ab)

In this passage the Yoginī is making predictions and only she is making signs. Another possibility is that both the adept and the Yoginī make gestures in response to one another. The Kula woman may show a finger or touch a limb of her body and the adept responds appropriately with the right gesture by touching some part of his body or showing the correct finger. If the responses are correct and the offerings he makes of food and other things satisfy her, the Kula woman teaches the adept and, as the Tantra says, ‘shows him the supreme place’. The exchange may also lead to union. Thus, according to the HT,[1] both make gestures in such a way that the gesture one of them makes is met with the correct response by the other. If exchange takes place in the prescribed manner, they perform the rite of union together. The procedure is similar in the ŚM. The secret language is discussed there in chapter twenty-three (ŚM 23/193cd ff.). There it is called Divyabhāṣā, Kaulabhāṣā, Chomakā, or Varṇachomakalā and is said to be well known to the eight types of Yoginīs.[2] It is used to communicate with them and Kula women (*kulāṅganā*) who are invoked by the worship of a *maṇḍala* (*cakra*). 'Speech' in this language is clearly meant to be a prelude to ritual union.

The way the *maṇḍala* is drawn is described first. One must find a pleasing place in a sacred seat, on a crossroad, forest or any other suitable solitary place. The adept goes out on the fourteenth of the dark lunar fortnight of Caitra in the middle of the night to draw it. The *maṇḍala* consists of a square enclosing a lotus with eight petals of various colours surrounding a white triangle. A red Point is drawn in the centre where Siddhayogeśvarī is worshipped along with eight Yoginīs on the petals of the lotus. Meat is offered to the fire and *bali* in the ten directions. The adept should stay there a few hours absorbed in meditation. If he hears sounds in one or other of the directions, he should throw a large *bali* offering there. If the Yoginī comes to him, he should make a liquid offering (*argha*) and please her with meat and wine. After she is well satisfied, he should tell her what needs to be done. If there is no guest, he should eat the sacrificial pap (*caru*) alone or with his partner (*Śakti*). He can also take it away and consume it at home. He should anyway, continue to repeat his mantra and practice meditation.[3] The ŚM continues:

> From that day onwards all the Kula women from that place come there in the middle of the night. They are beautiful and, modest (*salajjā*), their heads are covered as they gaze (lovingly) on the Hero who has come there. He should not say anything to them (only) communicate by means of secret signs and words (*chomaka*). He should do this every day. After a month, he achieves union (*saṁgama*). Then, at that very moment, he becomes their equal. Endowed with divine qualities and lordship, he wonders within the Egg of Brahmā and does everything by (the power of his) speech (alone). Once, this self-controlled one has

[2] The names, at least, of these eight types are almost the same as those one's described in YKh (1). They are: Pīṭhajā, Kṣetrajā, Yogajā, Sahajā, Kulajā, Garbhajā, Mantrajā and Antyajā. The text intends us to understand that they are human beings, but at the same time they are also deities. Accordingly, four of them are worshipped in the *maṇḍala* the adept draws to invoke their physical presence.

[3] Summary of ŚM 23/155-165.

worshipped in accord with this procedure in a well hidden cave or in the courtyard or porch (of his house), he should throw *bali* (there) in the middle of the night. (Thus even when he) resides in his own house, he achieves pleasing union (*priyamelāpa*) (with the Yoginīs) after six months.[1]

Next follows a long section on the convention (*saṅketokti*) through which adepts and Yoginīs communicate with each in secret codes, gestures and movements of the limbs. This exchange stimulates Kaula union (*kulamelāpaka*). The “SM supplies a long list of words in this secret language along with their meaning. Many of these words are Sanskrit. For example `*vilīnaka*' (= one who dissolves away) for `*mṛta*' (= dead). A number are unusual, although understandable such as `*guṇahara*' (= one who takes away another’s qualities’) for `*ripu*' (= enemy). Others are synonyms, such as, `*hitakara*' (= one who does good) for `*mitra*' (= friend). Some are `nicknames', for example, ‘*ghūghū’* for the elders of the family or ‘*ghāghī’* for the deity of the household. A few are the seed-syllables of the things named, for example MLŪṀ means `fat'. Others are conventional Kaula expressions, for example, `*veśya*' (lit. ‘prostitute’) for Yoginī. The passage ends with the remark that this matter has been discussed briefly (although it extends for more than 50 verses) and that it has been explained extensively in a previous Āgama.[2]

A long section on the language of gestures (*mudrā*) comes next. The Kula woman touches various parts of her body, thus communicating to the adept who is engaged in quietly repeating his mantra her thoughts and intentions. She greets him by touching her head with a finger. She may want to tell him that she considers him to be like a brother or father and so will not have sex with him. Conversely, she may indicate her passion by touching her genitals, the adept then responds by touching his and so she requests him for intercourse. She makes a side-long glance to mean do it this way or touches her hips to indicate that she wants to lie down together with him. Facing downwards she makes marks on the ground with her to toe to indicate that `out of love and respect protect the teacher's seed mantra'.[1]

She may also make predictions about the country's future. If she draws a circle with ashes and places the index finger in the middle of it, this indicates that that country will be destroyed by another one. If she takes some dust from within the circle and throws it into her mouth, this indicates that the country and its ruler will prosper.[2]

There are a series of gestures indicating that union (*melāpa*) will or is taking place. For example, if in the middle of the night she points her fingers upwards and looks up at the sky, she is saying that the union of the wheel of the goddesses is taking place. If she places her hands on her hips and smiles, it means that the union of the six, eight, nine or twelve goddesses is taking place. (282-3) If she smiles while rotating her hand pointing downwards, it indicates that the Bhūcarīs – the Yoginīs who 'move on the earth' - are uniting there. Similarly, she may indicate that union is taking place with the Yoginīs who live in the lower worlds, the Mothers in the sky and so on. Thus the Yoginī suggests that the terrestrial union between herself and the aspiring adept mirrors the unions that take place with Yoginīs in all the spheres of the universe.[3]

Chapter fifteen of the *Svacchandatantra* opens with the passage on *chomakas*[4] translated below. Svacchanda Bhairava commonly assumes the role of the Bhairava of the Great Goddess of a Kaula school. This is the case with Kubjikā as it is with Kālī of the Kālīkrama, even so the cult of Svacchanda Bhjairava taught in the rest of SvT makes no provision for the worship of Yoginīs. Thus it is highly likely that this chapter, which is entirely concerned with them, as is the one that follows, is a late addition to the text. The passage is also found in the *Kulakaulinīmata*.[5] It is hard to establish whether this is the original source because the KuKauM incorporates a great deal of material from Tantras of a range of schools, including long passages that are certainly drawn from the SvT. The first part of the passage consists of a short lexicon, which is as follows.

Bhairava is said to be the abode (*dhāman*). The teacher is said to be the 'bestower of all' (*sarvada*). The *sādhaka* should be known to be the 'mountain' (*giri*). The *putraka* is `the pure one' (*vimala*). The *samayin* is `the body of the beloved' (*kāntadeha*). Sisters are 'proud because of (their) strength' (*baladarpitā*).

One should know that (male) wine (*madya*) is `joy' (*harṣaṇa*). (Female) wine (*surā*) is `the delighted one' (*muditā*).

Fish should be known to be `those who move in the water' (*jalacara*). Meat is the 'increaser of strength' (*balavarddhana*). Born, they say, is `well developed' (*prarūḍha*) and dead is 'averse' (*parāṅgmukha*).

They say that blood is `nectar' (*amṛta*). 'Lotus stem' (*padmanāla*) is the heap of intestines (*antrasañcaya*). Semen is called `the moon' (*candra*). Sinew (*snāyu*) is said to be `the thread' (*sūtra*).

The cremation ground is `the warlock' (*ḍāmara*). A Rākṣasa is `the frightening one' (*bhayaṅkara*). A Piśāca is `the production of hairs (on the body)' (*romajanana*). Durva grass (*ruhā*) should be known to be `the menstruating woman' (*rajasvalā*).

Know that the night is `the covering one' (*chādikā*). Day is `the light' (*prakāśa*). The eyes should be known to be `the fickle ones' (*cañcala*). The (wise) know the tongue to be `the one who gathers together' (*saṅgrāhikā*).

The hands should be known to be the 'makers of wealth' (*dhanakara*). (The wise) know the feet to be 'the companions' (*sahacara*). The male organ (*liṇga*) is `the production of satisfaction' (*santoṣajanana*). The female organ (*bhaga*) `the growth of affection' (*prītivivardhana*).

The weapon is `the one that divides' (*vibhājajanana*). The knife (*kartarī*) is `the one that accomplishes the task' (*kāryasādhikā*). The consort (*dūtī*) is `the masseur' (*saṁvāhikā*). Incense is `the rejoicing' (*hlādana*).

Scent is `the production of satisfaction' (*santoṣajanana*). Kings are said to be `the sustainers' (*dhāraka*). The sacrificial animal (*paśu*) should be known to be `the awakener' (*vibodhaka*). The sacrificial pap (*caruka*) is `one who desires all' (*sārvakāmika*).

Cooked rice (*anna*) is said to be `the means' (*sādhana*). Fat (*vasā*) is `the scum of boiled rice' (also 'the spiritous part of wine' *maṇḍa*). The direction (*diśā*) is `the face' (*mukha*) and 'the ear' (*śravaṇa*). The skin is said to be 'the sensitive one' (*saṁvedanī*).

The nose is said to be `the well established' (*susthita*). The mouth is `the one who reflects' (*pravicāraka*). Wind is `the walking about' (*pracāra*). The mother is said to be `the benefactoress' (*dhātrī*).

The father is `the creator' (*sṛṣṭikartṛ*). (The wise) know the brother to be `the protector' (*pālaka*). The sister should be known to be `the one who does what is auspicious' (*śubhakarī*). The female companion (*sakhī*) is `she who accomplishes every purpose' (*sarvārthasādhikā*).

The friend is `the production of good qualities' (*guṇajanana*). (The wise) know the enemy to be `the destruction of qualities' (*guṇanāśa*). O goddess, the two ankles (*sphija*) are said to be 'the illuminators' (*chit*). The eye is said to be 'vision' (*dṛṣṭi*).

The teeth are said to be `the cutters' (*khaṇḍaka*). The belly is said to be 'the foundation' (*ādhāra*). The heart is said to be `the genitals' (*guhya*). Know that bone is 'the hard one' (*kaṭhina*).

Know that fat (*medas*) is fat (*vasā*). Marrow is said to be `the generator of filfillment' (*puṣṭikara*). Excrement (*viṣṭhā*) is `the female jester' (*vidūṣikā*). Urine is said here to be 'secretion' (*srāva*)'.

Menstrual blood (*kusuma*) is 'the black lotus'. (The wise) know that smoke (from the cremation ground) is 'the sustainer' (*dhṛtikara*). The gathering (*melaka*) is `the aggregate' (*saṁghāta*). The son is `the illuminator' (*uddyotaka*).

The daughter should be known to be `the giver of joy' (*hlādikā*). (The wise) know that one who is disturbed (*kṣubdha*) is 'unsteady' (*calita*). A wicked person (*dūṣaka*) is said to be a `paramour' (*jāra*). Yellow is `that which is praised' (*vandita*).

They say eaten is `acquired' (*prāpta*) and vomited (*chardita*) means 'deformed' (*vikṛtīkṛta*). One should know that defiled (*dūṣita*) is `dragged (along)' (*karṣita*).

(The wise know) that what has been agreed (*saṁmata*) is `the Rule' (*samaya*). The teacher (*mahalla* (?)) should be known to be `the protector' (*rakṣaka*). The goat is `the little finger' (*kaniṣṭhaka*). Right conduct (*vinaya*) is `bodily action' (*dehakarman*). Spiritual discipline (*sādhana*) is said to be 'the repetition of mantra' (*japa*).

What has been offered to the fire (*homita*) is `the production of accomplishment' (*siddhijanana*). Division (*vibhāga*) is said to be `pleasing' (*rocakaḥ*). The collection (of *vīra* sacrificial offerings – *vṛnda*) is called a 'group' (*kadamba*). Rare (*virala*) is said to be `separated' (*aśliṣṭa*).

The disciple (*śiṣya*) is said to be the 'pure one (*vimala*)'. The Command is said to be desire (*icchā*). A vision of the deity is (called) 'that'. (The wise) know that (a sacrificial victim) struck with a weapon is 'acquired' (*labdha*). One who practices at night (*niśācara*) is a 'cat' (*viḍāla*). Clawed animals are `ones who tear apart' (*vidāraka*). One should know that what has been brought (*anīta* as an offering) is 'the river'. What has been protected is `what has been hidden' (*pihita*).

Just as the HT (2/3/53-67) treats the two types of *chomaka*, verbal and corporeal, separately, the SvT first deals with the verbal form before going on to treat the corporeal equivalent. Thus after the code words have been explained in this way, the other kind of *chomaka* is described, namely, the secret language of gesture. As in the other examples we have noted, Yoginīs make these gestures by touching various parts of their body. However in this this case, the parts of the body they touch indicate principles of existence. Kṣemarāja explains the reason for this: 'sometimes by an intense descent of power one manages to achieve an encounter (*melaka*) (with the Yoginīs). Then the goddesses indicate the path to him, the best of adepts, by showing him each principle directly.'

The text is almost entirely uniform. The first line is typical of the structure of the rest. This runs: 'The (Yoginī) who touches (her) topknot indicates (the principle) Śakti.' In this way each goddess or Yoginī touches a part of her body to indicate where the adept should experience the respective principle (*tattva*) or, at least, project it onto his own body. Their location there serves as a code by which they can be indicated to others. These places and their corresponding principles are as follows:

1) The topknot – Śakti. 2) The head – the Drop (= Sadāśiva). 3) The forehead – Īśvara. 4) The palate – Rudra. 5) The tongue – Śuddhavidyā. 6) The uvula (the location of Lambikāśakti) – Ananta (who governs Māyā). 7) The throat – Time. 8) The lotus of the Heart – Puruṣa. 9) The navel – Prakṛti. 10) Below the navel – the Intellect. 11) The genitals – the Ego. 12) The hip – Space. 13) The thighs – Wind. 14) The knees – Fire. 15) The shanks – Water. 16) Feet – Earth.[1]

The *Svacchandatantra* concludes:

> O goddess, one should know the body. O beloved, it is made of all the gods. O mistress of the gods, the Yoginīs bestow boons on the one who is engaged in worship, the fire (sacrifice) and the repetition of mantra. (They offer boons) to the reciter of mantra engaged in meditation, the practice of the Rule, knows the parts of time and possesses (knowledge of ritual) action. (The Yoginīs) reveal the Great Path that has many delights (*bhoga*). O mistress of the gods, going to the king of the mountains, he gets the fruit (of his practice).[2]

CHAPTER SIXTY-THREE

The Plane of the Hexad of the Command.

The venerable (goddess) Vakrā said:

Now listen, I will tell (you about) the plane (of realisation) (*bhūmikā*) of the Hexad of Knowledge (*jñānaṣaṭka*). There is the Yoginī (called) Six (Ṣaḍi) of the six principles along with a seventh.[1] (1)

The Yoginī of the Six Yoginīs

The six (collectively) are the seventh Vidyā. The six (*ṣaḍi*) are the Kula consisting of the group of seven.[2] Their authority over knowledge is established from the teaching concerning the Peak (syllables of these Yoginīs).[3] (2)

It is a single syllable with six letters and belongs to the City of the Moon. Kuleśvarī is born in the Kula of (Hara) the King who is the lunar orb (*candrabimba*).[4] (3)

And she has come forth from that body (of the god and entered) into the Cave Dwelling of the Kadamba (Tree). And the six goddesses who are (also) there reside on their natural plane (of being).[5] (4)

These seven Kula deities are those of the division of the sevenfold Command. Hara is the benefactor on the mountain of Meru, the king of the Kula mountain.[6] (5)

The deity of the six, which is the Shade of Hara[7], has arisen within Hara's bliss and (so) there are six cave-dwelling goddesses of the (Hexagram which is the) original image (*bimba*)[8] of the Abode of the Cave (*guhālaya*). (6)

(When) the activity (that) generates the seed-syllables (*sabījakaraṇakriyā*) (takes place) in accord with the teaching concerning the six sacred seats then (the one) sixfold energy (*ṣaḍiśakti*) with (its) divisions (operates) in the field of the locations (in the *maṇḍala*) with seed-syllables (*sabījasthānagocarā*).[9] (7)

Brahmins worship (her) constantly in (the Point) the venerable City of the Moon. (She is) the one Yoni and Rudra's power, the deity called Yākṣiṇī.[10] (8)

She is the leader (*nāyakī*) of the Path of Mantra.[11] She presides over the Transmission (*krama*) which is the authority (*adhikāra*) over everything, especially, the lineage (*santāna*). (9)

Indeed, this is the first lineage (*anvaya*),[12] namely, the deities (known as) the Seven Mothers.[13] (The wise) know that the locations of the Houses[14] beginning with the Foundation up to the (Wheel of the) Command are six. (10)

The deity of the six (*ṣaḍidevatā*),[15] (the goddess) Anāmā (the Nameless)[16] is established (and made manifest) by (following) the left path.[17] They too have arisen, with form (*sākāra*) and consciousness (*sacetasa*) in the senses. (11)

Verily (they are) the Mothers who exude with the waters of the Void.[18] Their Vidyā is that of Charioteer,[19] the deity of the left (*vāmadevatā*) who does (all things) (*kartarī*). (12)

She stands at the southern door[20] and is propitious (*dakṣiṇā*) as the bliss of the Yoni. The goddesses are Ḍa, Ra, La, Ka, Sa, Ha and Ya along with the seven syllables of the mantra.[21] (13)

This (group of Seven Mothers) is said to be the first lineage[22] that was brought down (to earth) by the first Command. (Here) there are seven Gestures,[23] three Caves, (a group of) three and one Cave Dwelling.[24] (14)

The teaching concerning the caves operates in this way in the Saṁvarta (*maṇḍala*). Their sacrifice takes place within the *maṇḍala* in (each of the groups of) six in accord with (its) parts (*prakāra*). (15)

The Seven Yoginīs

Ḍākinī

The teaching concerning the shattering of the jar (of the body) is established by the Path of Mantra.[25] One mother is the letter Ḍa. She is the triple transmission of the letter E. Once one has broken through the letter E with the seven, one should practice restraint (*nigraha*).[26] (16-17ab)

Rākinī

The (Yoginī of the) letter Ra is conjoined with radiant energy and contains the centre of Hara.[27] She is the measure (which is the energy) within the knowledge of the Void (*khasaṁjñājñāna*) (along) with (the other) six in the essential nature of the sequence of the divisions. (17cd-18ab)

Lākinī

The (Yoginī of the) letter La, is within the (universal) activity (of the goddess) (*cala*). (She consists) of three Las conjoined with the five. Her own authority, (she is) the knowledge of application (*niyogajñāna*) within the letter La. (18cd-19ab)

Kākinī

The (Yoginī of the) letter Ka is within the letter Ka and is encapsulated between two Kas. Kākinī (the female crow) whose form is that of a crow resides in the middle of the Ka (of the reality) whose form is the Sky. (18cd-20ab)

Śākinī

Śākinī is in the middle of the Moon and is adorned with the container of the letter Śa. By the power of magic (*kṣudrakarman*) Śākinī is within the letter Śa. (20cd-21ab)

Hākinī

The female Gander, Hākinī, is in the middle of the Gander within the four (syllables): HAṀSA HAṀSA. Hākinī is the form (*vigraha*) of disjunction in the middle of the Void. (21cd-22ab)

Yākinī

Yākinī is in the middle of the (place of) birth and is conjoined with the group of six Kulas. Yākinī, who controls the Channel of the Waves (of Kuṇḍalinī), is the Supreme Goddess (*parameśvarī*). (22cd-23ab)

By the division of the seven groups of seven and by the Command of the abode of seven times seven (seed-syllables) there are, in due order, seven Peak (syllables) and the eighth part (of the mantra) (*pada*), which is that of the seven times seven (collectively).[28] (23cd-24ab)

The eighth part (of the mantra) is a part (*pada*) consisting of eight letters. They are successful even by disjoining (them) from the Ocean (of the core *maṇḍala*) with the seven.[29] (24cd-25ab)

The vowels are generated by the seven and the Rudras (who govern the letters) by the seven groups of seven. The convention of the current which is the Kulakrama consisting of the seven times seven is due to the seven. (25cd-26ab)

They have arisen from the seven and shine radiantly along with the one called the seventh vowel (ṛ). (It is) the heart of the seven goddesses, the Heart endowed with the five (*Praṇavas*). The Heart of the Kula that is divided into seven is divided into seven. (26cd-27)

The Seven Yoginīs of the Skulls[30]

Karkaṭī – Ḍākinī

The Gesture of Kapālinī[31] of Akula is said to be undivided (*abhinna*). The Skull (is the goddess) of the seventh (syllable) and the seventh (syllable is that) of the Skull. (28)

The seventh (aspect of the) Command is Śiva who has no end.[32] Karkaṭī is the deity of the Skull which is the letter Ḍa. (29)

The powerful Skull is by (this initial) differentiation (*viprayoga*) (of the letters) conjoined with (the letters) beginning with Ḍa. Present in (the letters) beginning with Ḍa it is within (the series) begining with Ḍa along with the five and the three of the letter Ū. By awakening the five signs (*abhijñāna*), the letter Ḍa becomes sixfold.[33] (30-31ab)

Hāṭakī – Rākinī

Hāṭakī is the female demon (*rākṣasī*) of the Skull which is the letter Ra. The Skull Ra in the Battle of the Great Union and three RAKAs.[34] (31cd-32ab)

Virajā – Yākinī

The syllable of the of the Skull of the letter Ya is the form of Virajā. That is the Skull called the Trident which is in the six, (divided up according to) the part (of the *maṇḍala* to which it belongs). (It consists of) the Spear of the Trident and the Trident of the two spears, in due order.[39] Having broken through the abode in the middle of *rajas*, the Skull of the Trident (is formed). (41cd-43ab)

The Skull consists of the seven goddesses. (Thus) the Skull has become sevenfold. (Similarly) the one (Yoginī) is sevenfold. Due to the seven divisions there are seven (Yoginīs). The seven times seven energies are consumed by the Scalpel of Knowledge[40] of the seven. (43cd-44)

Having known the teaching concerning the seven times seven, (one has understood) the teaching of the seven which is the Kula of the Seven. The teaching concerning the Kula of seven syllables is part of the teaching concerning the Ocean (of the *maṇḍala*). The seven deities of the sacred seats are (part) of the teaching concerning the seed-syllable (which is the aggregate) of all of them (*piṇḍa*).[41] (45-46ab)

(Essentially) there is (just) one Vidyā who is the energy that divides up (the mantras) (*bhedakī*) and, greatly astonishing, devours all things. She resides in the Peak (syllables of all) the deities and in the *Praṇavas* and rest of the seed-syllables. (46-47ab)

(The act of) devouring (and absorbing these energies into the Vidyā) is a part of the (process) of devouring (and absorption of all the other energies of the mantras of the Krama). The (one) Peak (syllable) that consumes (all the others) (*grāsakūṭa*) is of many kinds. (47cd)
